ADVANCED ELECTRONIC TOOLS FOR  
MAGICIANS & MENTALISTS

**Illuminati Magic**

**Founded in 2017**

# Illuminati Magic

## Welcome to Illuminati Magic

At Illuminati Magic, we believe the most powerful tools are the ones the audience never sees.

Since 2017, we've redefined what's possible in magic and mentalism—quietly powering unforgettable moments with precision-crafted devices built for modern performers. From RFID miracles to real-time AI reveals, our systems deliver seamless integration, invisible methods, and impossible outcomes.

Every device is engineered to inspire confidence, perform flawlessly, and disappear into the moment. From intimate close-up sets to sold-out stages, we help professionals push boundaries—one effect at a time.

## Trusted by the Best

Illuminati Magic powers performances in over 80 countries—from top creators and consultants to working pros in TV, theatre, and stage.

They trust us for one reason: results.

We collaborate with artists, engineers, and thinkers to fuse performance insight with technology.

The result? Tools that elevate your act—without ever revealing the method.

## Meet the Founder

Nathan Buzza founded Illuminati Magic after a career in mission-critical electronics, where he developed secure wireless systems for governments, hospitals, and even the U.S. Secret Service. His work directly contributed to a deployment at the White House supporting protective operations for the President of the United States.

He was recognized as the EY Entrepreneur of the Year and received the Western Australian Lifetime Achievement Award for his contributions to the state's technology sector.

Today, he brings that same obsession with precision to the world of magic—creating tools that feel invisible, intuitive, and inspired. Under his leadership, Illuminati Magic has become a trusted name at the intersection of performance and innovation.

## Intelligent Dice. Invisible Insight.

Unifi Dice are electronic tools that elevate magical performance. Precision-crafted in black, white, or red, and available in 16mm or 19mm, they suit any style or routine. Buy individually or as a set of three—tailored to your needs.

The moment a die is rolled—or a magnetic field is detected—you instantly know the number, color, or presence of a PK ring. This invisible insight enables smooth, impossible reveals and deeply engaging effects that feel like real mind-reading.

## Designed for the Way You Perform.

Unifi Dice give you complete flexibility in how you receive information. Feel haptic cues via the Thumper, customize vibration strength and duration, or view the result visually on the Notifier. Prefer audio? Hear it spoken through a Bluetooth earpiece.

Roll the dice. Kronaby, Fossil, Pitata, iArvel, S&B, and Turner watches sync. Time sets itself—automatically and invisibly.

## Perform with Confidence. Every Time.

Built for seamless integration, Unifi Dice keeps you focused on the magic. Each signal is precise, fast, and discreet—delivered exactly how you want it.

From tactile pulses to screen displays and spoken reveals, Unifi Dice transform hidden systems into unforgettable moments. The method stays invisible. The magic feels real.

## One Sensor. Infinite Possibilities.

MultiSense redefines performance control. Detecting movement, rotation, or magnets, it delivers invisible signals at the moment they matter most. Whether hidden in a prop or placed on stage, it offers real-time awareness—silently and reliably.

Its compact design fits inside everyday objects. Measuring just 54 x 17 x 9 mm (or 48 x 16 x 8 mm in heat shrink), and with a 10-meter range, it integrates smoothly into your setup. Pair it with The Thumper or Notifier and stay connected from a distance.

## Designed for Performance.

MultiSense runs quietly in the background, keeping focus on your performance. Its long-lasting battery supports extended use, and programming is simple on Mac or PC. It disappears from view—but never from function.

Receive each cue your way: feel it with the Thumper, see it on the Notifier, or hear it in your earpiece. Every detail—from orientation to trigger—is delivered precisely and silently.

## The Intelligence Behind the Effect.

The Unifi App lets you turn each signal into something magical. Trigger spoken words, send custom visuals, or prompt actions—all in perfect sync with your routine. MultiSense doesn't just detect—it understands, empowers, and elevates your performance.

# Unifi PENSENSE Lite

## Color Prediction. Refined.

PenSense Lite delivers unmatched clarity, control, and confidence. The moment a marker is chosen, a discreet signal is sent to your Thumper or Notifier—revealing the selected color instantly, silently, and without hesitation.

No guesswork. No delay. Just intuitive magic that feels effortless and astonishing.

From casual sketches to bold, visual predictions, PenSense Lite adds polished reliability to every performance.

## Freedom to Perform.

With a 10-meter wireless range, PenSense Lite transitions effortlessly between close-up, parlor, and stage. Compact and discreet, it hides in plain sight—giving you full mobility and control.

A high-capacity battery powers over a year of use. And when it's time to recharge, USB charging is quick and seamless. No battery swaps. No downtime. Just consistent, ready-to-go performance.

## Elegance in Disguise.

PenSense Lite lives inside a sleek leather cup holder—familiar, modern, and understated. It blends perfectly into your workspace, keeping the spotlight on the magic.

## Real Color. Real Magic.

ColorSense transforms a simple box of Crayola Crayons into a powerful prediction device—disguised in plain sight. Inside, advanced electronics detect a spectator's choice the moment a crayon is lifted—even before the drawing begins.

You receive the signal instantly via Thumper or Notifier. Feel it. See it. Hear it. The method stays invisible. The effect feels not just magical—but truly impossible.

## Designed to Disarm.

ColorSense uses real Crayola Crayons in an authentic box. No strange packaging. No suspicious modifications. Just a trusted object that makes your magic feel natural.

It's lightweight, fast to reset, and made for real-world use. No switches. No toggles. No waiting. Just pick it up and go—perfect for fast-paced routines and repeat shows.

## Seamless Control.

With tactile, visual, and audio feedback, ColorSense gives you total freedom. Feel the signal through Thumper. See it on your Notifier. Or hear it through your Bluetooth earpiece.

ColorSense doesn't just reveal a color—it creates a moment that feels personal, powerful, and unforgettable.

## The Smallest. The Smartest. The Fastest.

Magneto 3 isn't just a detector—it's your secret weapon. At only 35 × 19 × 8 mm, it hides behind your finger and vanishes inside any prop. Skin-toned, silent, and lightning fast, it delivers real-time magnetic detection with flawless precision. Whether you're performing "Which Hand," a coin toss prediction, a spike routine, or a telepathy reveal, Magneto 3 gives you instant insight—without movement, noise, or delay.

## Fast. Silent. Precise.

Scans complete in just 1/10th of a second. The signal reaches you before anything appears to happen. You can palm it, clip it, or hide it in a wristband. Embed it inside a thumb tip, envelope, or prop box. There's no vibration, no sound, and nothing suspicious. It also includes magnetic pole detection—so you can perform clean, impossible "heads or tails" predictions from any angle.

## Connected. Calibrated. Ready.

Bluetooth is built-in. Pair Magneto 3 with the Unifi App to trigger reveals, automate timed cues, or receive spoken prompts through a hidden earpiece—all completely hands-free. It calibrates automatically on startup and adapts instantly to your environment. With up to 20 hours of performance per charge, Magneto 3 is made for real-world professionals. From rehearsal to full-day shows, it's always ready—quiet, precise, and invisible.

## Miniature Display. Infinite Control.

Notifier is the most advanced peek device—built for professionals who demand speed, precision, and discretion. With a vibrant color screen and silent vibration motor, it delivers real-time information without distraction. At just 55 × 18 × 12 mm, it fits naturally in your hand, wallet, or hidden compartment. No noise. No movement. Just invisible insight.

## One Device. Every Input.

Notifier connects effortlessly to the entire Unifi ecosystem—Dice, ColorSense, PenSense, MultiSense, Second Sight, StealthVision, Magneto, MindScale, Thumper, and Promystic devices. From dice rolls to time reveals, every cue is instant and silent.

It also supports top magic apps like Inject, WikiTest, Cognito, ELIPS, Pi Revelation, and Magician's Calculator. Push predictions, peek drawings, and stream impressions—turning every reveal into real-time mind reading.

## Built for Performance. Always Ready.

The retina screen displays text, numbers, symbols, and impressions from electronic pads. It tracks battery, signal, and device status—keeping you in full control.

With Bluetooth built in, Notifier pairs with the Unifi App to automate cues, trigger reveals, or send spoken prompts to a hidden earpiece.

USB rechargeable with all-day battery life, Notifier is compact, powerful, and designed to disappear—except when it matters most.

## Precision in the Palm of Your Hand

The Thumper is the go-to remote control system for magicians and mentalists who demand subtlety, speed, and precision. As the intelligent core of the Unifi ecosystem, The Thumper connects wirelessly to Dice, ColorSense, PenSense Lite, MultiSense, Second Sight, MindScale, StealthVision, Magneto, and Scribe—while remaining fully compatible with Promystic devices. It transforms invisible signals into silent, perfectly timed tactile cues. Whether revealing a thought, guiding a prediction, or running an entire routine, The Thumper ensures your performance stays smooth and ahead of the moment.

## Real-Time Input. Endless Possibilities

With a discreet alphanumeric keypad, The Thumper becomes your hidden command hub. Enter force numbers, ZIP codes, lottery picks, or Pi-based reveals without hesitation. Paired with Scribe, The Thumper can instantly print tickets, passes, receipts, or even playing cards. It integrates natively with apps like Inject, WikiTest, ELIPS, TimeSmith, and the Magician's Calculator—and even emulates swipe gestures to control routines without ever touching a screen.

## Compact Design. Invisible Power

At just 38 × 62 × 7 mm and weighing only 20 grams, The Thumper disappears into any setup—beneath clothing, inside a prop, or in your hand. Its tactile keypad provides silent feedback through fabric, while the rechargeable battery delivers up to 12.5 hours of continuous use.

### SmartWatch Integration

S&B

Pitata

S&B  
Pocket Watch

Turner

Kronaby

Fossil

iArvel

## Control Time. Automatically.

The Thumper sets the time on Kronaby, Fossil, Pitata, S&B, iArvel, and Turner watches—silently and on cue. Whether triggered via dice rolls, the keypad, or any Unifi device, the watch syncs automatically. No taps. No prompts. Just a perfect time-based reveal, hands-free.

## Unlock Spectator Phones

The Thumper can remotely type the spectator's PIN onto their lock screen—digit by digit—without touching the phone. The timing of each number is fully programmable, letting you shape the rhythm of the reveal for maximum drama and theatrical impact. It's a jaw-dropping moment they'll never forget.

## Ghost-Type Custom Messages

Effortlessly ghost-type anything onto a spectator's phone—from a name or word to a full prediction. The message appears in real time with no visible action from you. Any Unifi device can serve as the trigger—Dice, Second Sight, keypad—turning the moment into something spontaneous, personal, and utterly impossible.

## A Sharpie That Thinks

The Thumper Pen condenses all of The Thumper's functionality into a Sharpie-style Chisel Marker. It writes and signs naturally while transmitting silent inputs wirelessly. Whether for walkaround, close-up, or casual performance, The Thumper Pen is your most discreet and versatile secret weapon—hidden in plain sight.

## Precision, Evolved

MindScale delivers weight-based magic with stunning precision. With 0.1-gram sensitivity and Bluetooth connectivity, it gives you complete control. Use it with the companion app or standalone—MindScale links directly to the Notifier and Unifi devices for seamless, interactive effects.

## Built for Performance

Switch between finely tuned modes:

- 🎴 **Card Mode:** Perfect for routines involving playing cards.
- 🎴 **Billet Mode:** Ideal for predictions and mentalism effects.
- 🎴 **Unified Weight Mode:** For uniform weight-based reveals.
- 🎴 **Varied Weight Mode:** Enables creative effects with differing weights.
- 🎴 **ColorSense Mode:** Detect and identify colored objects effortlessly.
- 🎴 **Kurotsuke Effect:** A mentalism effect to detect hidden items.
- 🎴 **Drinks Mode:** Integrate beverages seamlessly into routines.

MindScale adapts to your style—whether classic or customized

## Silent Insight, Instant Impact

Results appear instantly—as custom visuals on the Notifier or spoken cues in your earpiece. Built-in image processing turns weight data into striking visual or printed reveals.

## MindScale Bowl

The MindScale Bowl is a beautifully engineered companion for your MindScale. Crafted from durable ABS using precision 3D printing and finished by hand, it blends strength and elegance into one refined object.

Standing 77mm tall and 150mm wide, it's perfectly proportioned for both performance and display. Whether on stage or close-up, it adds visual presence while keeping the spotlight on the magic. Designed to integrate seamlessly with MindScale, it elevates your routines with understated sophistication.

## MindScale Shell

Transform your MindScale into an ordinary-looking deck of cards with our precision-crafted Concealment Shell. Engineered with 0.10mm accuracy, it fits seamlessly around your device.

Choose a blank white finish for custom branding, or go with the Phoenix Branded version for instant readiness. Sleek, discreet, and functional, the Shell enhances performance with style.

## MindScale Carry Case

Elevate your MindScale setup with this double-layered leather case, crafted for magicians performing card effects.

Dual compartments securely hold both your scale and a deck of cards.

Rigid internal support shields against pressure and impact, ensuring durability and readiness. Compact and sleek, it blends style, function, and protection—keeping your performances polished and professional.

## Kurotsuke Ball Set

The MindScale Kurotsuke Ball Set refines the classic mentalism routine, engaging spectators in every performance. It includes four white balls (5.20g) and one radiant red ball (5.65g), all crafted from smooth, durable resin. The subtle weight difference is undetectable—enhancing the illusion.

With vivid color and precise design, the set is perfect for Kurotsuke and other mentalism effects—delivering clarity, deception, and elegance.

## A Revolution in RFID Magic

Second Sight is the world's smallest, fastest, and most sensitive RFID reader—designed exclusively for magicians and mentalists. At just 61.5 × 38.5 × 7.4 mm with a 125 mm detection range, it captures NFC tags in under a tenth of a second. That speed means no hesitation, no lag—just real-time magic the moment you need it. With custom tags programmed for unique audio, vibration, graphics, or image predictions, Second Sight lets you craft deeply personal reveals across a range of props: playing cards, postcards, passports, business cards, and more.

## Engineered for Live Performance

Second Sight delivers seamless control whether you're close-up or center stage. The LR version extends your range to 2.5 meters—ideal for table performances and hands-off reveals. The LR Pro reaches 10 meters, making it perfect for stage professionals. Second Sight supports simultaneous reading of multiple tags, and each scan can trigger anything from a text-to-speech reveal in your Bluetooth earpiece to an instant printout from Scribe.

## Built for the Ecosystem

Second Sight integrates seamlessly with the Unifi platform and supports both iPhone and Android. Receive reveals your way—through subtle vibrations (internal or via Thumper), vivid visuals on Notifier, or spoken cues through a Bluetooth earpiece.

## RFID Playing Cards

The RFID-enabled Second Sight Deck is crafted from 100% PVC, offering a durable, flexible feel that handles just like a standard deck. Designed for magicians, it's waterproof, thin, and nearly indestructible—ideal for repeated use in any environment. Each deck includes extra cards for added flexibility and can be easily programmed using the Unifi App.

## Lotto Deck

The Lotto RFID/NFC Deck includes 69 ultra-durable, 100% PVC cards embedded with RFID and NFC chips for flawless integration with the Scribe Thermal Printer, Second Sight, and iPhone NFC Reader. Designed to be thin, flat, and virtually indestructible, these cards handle effortlessly and are built to last.

## ESP Playing Cards

Zener ESP Cards feature the five classic ESP symbols, each embedded with RFID for flawless detection and perfect accuracy. Made from 100% PVC, they're thin, flat, and virtually indestructible—built to handle effortlessly and perform reliably.

## Blank & Double Blank

The RFID Blank Deck, available with Phoenix Red Backs or double-blank design, is perfect for creating custom effects. Made from durable PVC, these thin, indestructible cards handle like standard decks and can be programmed via the Unifi App.

## Tarot Cards

The RFID Blank Deck is built for creativity. Available in Phoenix Red Backs or double-blank, each card is embedded with RFID and made from durable PVC. Thin, flat, and indestructible—they handle like a standard deck and open the door to limitless custom effects.

## CardWords

CardWords fuses classic wordplay with advanced magic. Each card displays bold letters and point values—and hides a precision NFC chip. Seamlessly integrated with the Unifi App and Second Sight, CardWords unlocks powerful anagram routines, thought-of-word reveals, and endless mentalism effects.

## Print the Impossible

Scribe and Scribe Mini transform digital inputs into real-world predictions—printing lotto tickets, boarding passes, movie stubs, receipts, or handwritten notes in seconds using ultra-fast thermal technology. Every output is crisp, realistic, and perfectly timed to match your performance, creating the undeniable illusion that the impossible just happened before their eyes.

Scribe and Scribe Mini vanish into your jacket pocket, yet deliver blazing-fast prints in under five seconds—combining portability with professional-grade power. With a Bluetooth range of up to 15 meters and seamless Unifi control, your predictions are always crisp, connected, and right on cue.

## Realistic Predictions. Limitless Possibilities.

With Scribe's advanced template engine, you can generate authentic-looking lotto tickets—complete with custom dates, sorted numbers, logos, and Powerball fields. Whether triggered by an RFID scan, voice command, gesture, or a tap on The Thumper keypad, each prediction feels genuine and deeply personal.

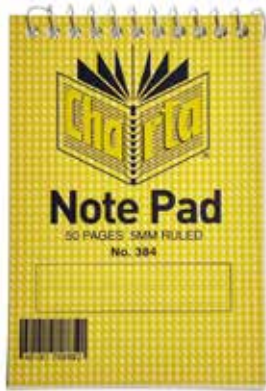

You can even simulate full handwritten reveals—names, sentences, or thoughts—rendered in handwriting-style fonts on thermal notepad paper. It looks and feels like something you wrote seconds ago. With the built-in Image Editor in the Unifi app, you can customize fonts, layouts, graphics, and manage multiple predictions through a clean, drag-and-drop interface

## Built for the Unifi Ecosystem

Scribe works in perfect sync with Unifi tools like Second Sight, Dice, PenSense, MultiSense, Magneto, MindScale, and Thumper. Whether triggered by a scan, tap, or silent gesture, Scribe responds instantly—with no delay, no friction, and no compromise.

It's fully integrated with powerful magic apps like Inject, WikiTest, ELIPS, Magician's Calculator, Fake Notes, and Fake Lock Screen. From digital thoughts to physical predictions, Scribe turns unseen signals into tangible miracles—printed in real time, exactly when they matter most.

## Thermal Notepad

The Thermal Notepad blends timeless design with cutting-edge deception. Styled like a classic spiral notebook—with dotted lines, faux perforations, and spiral tear holes—it feels completely innocent in the spectator's hands.

Paired with the Scribe Thermal Printer, it produces stunning printed predictions in a natural, handwritten style. Dynamic fonts and realistic flow make every reveal feel personal—whether it's a name, number, word, or drawing. Choose between black or blue ink for maximum flexibility. Compatible with Voice Recognition, Inject, and Impression Pads, the Thermal Notepad bridges digital and physical seamlessly. Print outcomes silently and on demand—right when it matters most.

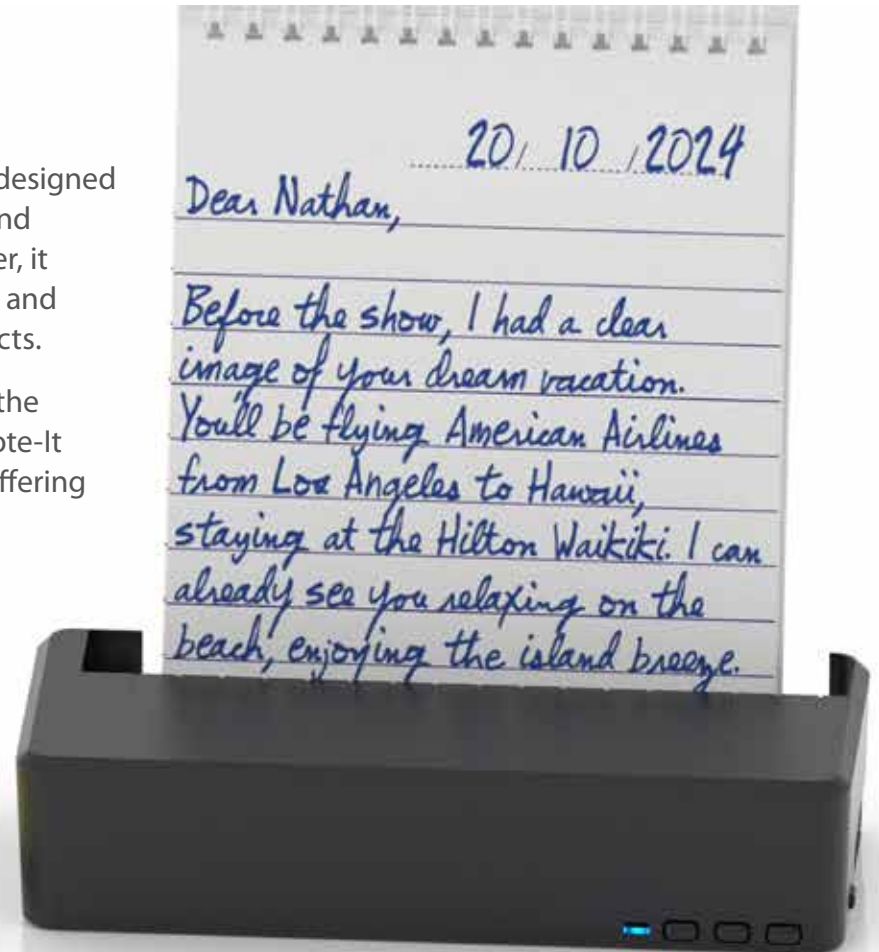

Available in two sizes, it's the ultimate utility device for modern magicians and mentalists.

## Thermal Note It

Note-It perfectly mimics classic yellow sticky notes, designed to enhance handwritten predictions for magicians and mentalists. Integrated with the Scribe Thermal Printer, it features advanced typography options like ligatures and overlapping characters for realistic handwritten effects.

Create stunning printed predictions using tools like the Magician's Calculator, Inject, or voice recognition. Note-It comes in 76mm x 76mm and 56mm x 76mm sizes, offering professional-grade results in every performance.

## Real Ink. Real Intelligence. Unreal Impact

It looks like a wallet insert. But with MindScribe, it becomes something extraordinary: a prediction in digital ink. A revelation that feels real. A miracle—made practical.

MindScribe is the world's first e-paper display built specifically for professional magicians. Powered by a 4.0-inch glare-free reflective screen, it delivers razor-sharp clarity, vivid color, and astonishing realism—whether you're on stage or inches from your spectator. Every pixel mimics printed ink so convincingly that from just 30 centimeters away, it becomes indistinguishable from the real thing.

No other display has ever looked—or felt—this real. And certainly not in a magician's wallet.

## A Fully Standalone Powerhouse

No phone. No app. No pairing required.

MindScribe operates independently, receiving real-time data from any Unifi device—Second Sight, Thumper, Dice, MindScale, or StealthVision. Each reveal is wireless, instant, and invisible—no buttons, no lights, no delay.

Whether you're revealing a chosen card, a dreamed destination, or a drawing created moments ago, MindScribe responds with zero lag and absolute precision. It stays invisible, so your performance can take center stage.

## True Color E-Paper. For the first time ever.

Until now, color e-paper felt like a prototype—dim, slow, and, unreliable. MindScribe changes everything. This is the first color e-paper display built for live performance.

Reds, blacks, deep blues, and vibrant yellows appear with striking fidelity. A custom optical diffuser keeps the screen paper-like and glare-free, even under harsh stage lighting. No backlight. No glow. Just crisp, ink-like graphics that appear silently—like real ink on paper.

## Personal Reveals. Beautifully Formatted

MindScribe adapts to your voice and style—whether it's a handwritten note, boarding pass, receipt, or journal entry. Every reveal feels authentic because it's crafted by you.

Choose from Sharpie scrawls to elegant cursive, adjusting size, spacing, and alignment for a distinct voice. Design and preview everything live in the Unifi app with an intuitive drag-and-drop editor.

Create custom profiles with unique triggers, backgrounds, and behaviors—text or image, subtle or bold. Instantly switch between up to ten reveals using Thumper, RFID, or Second Sight.

Imagine a blue sticky note fading into view: "You were thinking of Rome..." Styled as if written moments ago, it feels spontaneous and personal—yet it was triggered invisibly and precisely on cue.

## Real Moments. Real Reactions

A spectator selects the Two of Hearts and signs it—unaware they're using an impression pad. Instantly, the Unifi app captures the signature, overlays it on a digital replica, and sends it to MindScribe. Seconds later, the magician opens their wallet. Inside the ID window: the same card. Same signature. Same position. A flawless digital twin.

It feels like teleportation—clean, silent, and unexplainable.

## Predictions Already Written

In another performance, the spectator simply thinks of a card. No writing. No input. The magician reveals a sticky note already shown on MindScribe:

*"You will choose the Ace of Hearts."*

It appears in casual handwriting on a yellow background, styled like a familiar notes app. With customizable fonts and colors, the reveal feels personal—like it was waiting all along. Triggered silently by Second Sight, it unfolds invisibly and on cue.

## Memories That Feel Real

*"You were flying somewhere..."* the magician begins. The spectator nods. MindScribe reveals a journal entry:

*"You flew American Airlines from LA to Hawaii, staying at the Hilton."*  
In soft, believable handwriting, it feels like a private diary entry. Designed in advance with the Unifi editor, every element—from font to phrasing—is under your control. The result feels intimate and real.

## Drawn Thoughts, Digitally Alive

A spectator draws a flower. Moments later, MindScribe shows the same image—with subtle changes, as if the thought evolved. Captured by an impression pad and rendered in digital ink, it feels less like a trick and more like mind reading.

# IMAGE PROCESSING

Welcome to the revolutionary Image Editor—your invisible Photoshop for magic. It connects imagination with flawless execution, allowing you to create photorealistic and printable predictions that feel indistinguishably real.

Design a boarding pass with a spectator's dream destination, a lotto ticket with their numbers, or a café receipt from a place they just named. Use it with the Scribe Thermal Printer for printed reveals, or render lifelike images onscreen. Each output looks genuine—perfectly aligned, naturally aged, and instantly believable.

Imagine this: a spectator whispers "Tokyo." Seconds later, you reveal a printed Japan Airlines boarding pass—departure time, gate, and seat all match. It's printed in real time, in authentic handwriting or typography. The magic doesn't feel like tech—it feels like destiny.

Built-in templates and smart layouts make it easy to design handwritten notes, magic squares, or realistic tickets—without ever opening a design app. The Image Editor works seamlessly with voice recognition, impression pads, AI prompts, and Unifi tools like Thumper and Second Sight. Every reveal becomes personal and emotionally powerful.

The Image Editor isn't just a tool—it's your creative secret weapon, delivering high-impact visuals while keeping your method invisible.

# INTEGRATIONS

Turn spoken words into magic with advanced voice recognition. Spectators can say a number, word, or phrase, and the Image Editor instantly processes their speech to create a custom, impactful reveal.

The Magician's Calculator lets you create predictions using information gathered through its intuitive interface. Use it for effects like TOXIC or to generate meaningful results from what appears to be random input.

The Impression Note is a next-generation input method that turns a spectator's iPhone into a live impression pad. It captures their typed words and transmits data directly into the Image Editor for use in your reveal.

Integrate electronic impression pads to capture and transmit handwritten inputs instantly. These tools ensure accuracy and responsiveness, helping you deliver a performance that feels polished and refined.

Connect your routine to the digital world with Inject. Spectators perform a Google-style search on their phones, and the Image Editor transforms the result into a striking visual prediction.

The spectator opens Wikipedia, selects a topic, and thinks of a word from the article. With WikiTest, the magician silently discovers the word and sends it to the Image Editor, where it appears in a unique, creative way.

Discreetly enter numbers, words, or short phrases using a Thumper device. This subtle input method allows for seamless control over the timing and nature of your reveal without drawing any attention.

Use MindScale to measure the impossible. Whether counting objects like Smarties in hand or calculating totals from cards, this system provides real-time input for astonishing effects.

Use RFID technology to trigger instant reveals. With Second Sight, scan RFID tags to produce perfectly timed custom text, graphics, or visuals—ideal for effects that feel personal and immediate.

Bring the swami gimmick into the digital age. The Image Editor decodes inputs from your device and converts them into high-quality digital or printed predictions that look completely natural.

Simulate your smartphone's lock screen to create modern, mind-blowing digital predictions. Spectators believe they're seeing your actual screen—until a perfectly timed surprise is revealed.

The Video Screen feature in the Unifi App mimics an iPhone camera view while letting you enter information using a hidden 12-button remote. It sends data like lotto numbers or dates to the Image Editor in real time.

The Image Editor connects directly with social media platforms like Facebook, X, Instagram, and Snapchat—making it easy to share reveals as photorealistic content.

It also integrates beautifully with e-paper tools like Inversion Board and MindScribe, delivering ultra-realistic handwriting, Sharpie, and chalkboard effects with unmatched precision.

## The Future of Magic—Reimagined.

Unifi Intelligence redefines what's possible in magic. It blurs the boundary between illusion and reality by embedding AI directly into your toolkit—turning everyday inputs into unforgettable moments. Whether you're on stage, close-up, or online, Unifi Intelligence works invisibly in the background, powering reveals and reactions with perfect timing and total precision.

## What Is Unifi Intelligence?

Unifi Intelligence is a next-generation AI engine built into the Unifi App—designed exclusively for professional magicians and mentalists. It captures, processes, and transforms subtle inputs—like a chosen word, page number, drawing, or dice roll—into personalized revelations in real time. No buttons. No delays. Just intelligent assistance that amplifies your magic while staying invisible.

It connects with a wide range of input tools: electronic dice, impression pads, RFID (via Second Sight), voice recognition, and more. It also integrates seamlessly with trusted apps like Inject, WikiTest, The Stranger, and the Magician's Calculator. Once triggered, Unifi Intelligence processes the data and delivers the reveal through Notifier, Scribe, Apple Watch, Thumper—or even directly to the spectator's phone.

The system is fast, flexible, and deeply customizable—ensuring every reveal feels impossible, organic, and uniquely personal.

## How It Works

Unifi Intelligence connects your tools and outputs effortlessly:

- 🌀 **Electronic Dice**—A roll triggers instant results.
- 🌀 **Impression Pads**—Anything drawn / written is decoded in real time.
- 🌀 **Voice Recognition**—Spoken words become immediate inputs.
- 🌀 **Magician's Calculator**—Pulls data like birthdates, zodiacs, and ZIP codes.
- 🌀 **RFID via Second Sight**—Identifies objects silently and instantly.
- 🌀 **Inject / WikiTest**—Seamlessly powers online-style reveals.

Every signal is processed by AI behind the scenes—delivering written, spoken, printed, or digital revelations with perfect timing and flow.

Why it changes everything: Unifi Intelligence isn't just an upgrade—it's a creative revolution.

- 🌀 **Tailored Magic:** Every reveal is specific, personal, and unforgettable.
- 🌀 **Seamless Integration:** Inputs and outputs stay perfectly synced—no buttons, no friction.
- 🌀 **Realistic Illusions:** From fluid handwriting to smart graphics, it looks and feels real.

## The Personalized Poem

A spectator enters a random number into the Magician's Calculator. Moments later, you reveal a handwritten poem that seems to speak directly to them—referencing their birthdate, hometown, and even elements of their personality. How? Unifi Intelligence calculates their star sign, location, and emotional tone to craft a custom poetic reveal. Printed in realistic handwriting, the result feels magical, personal, and unforgettable.

## The Holy Grail of Drawing Duplication

A spectator sketches an image—a house, flower, or symbol—on an impression pad. Unifi Intelligence instantly interprets the drawing and reproduces it on your Scribe Thermal Notepad with uncanny accuracy. This isn't just duplication—it feels like thought transference. The effect delivers a flawless reveal that elevates the impossible.

## The Thumper Identity Trick

With a few discreet taps on The Thumper, you input basic details: birthdate, profession, or whether the person is living or deceased. Unifi Intelligence generates a matching name. The reveal appears silently on Notifier, speaks in your earpiece via TTS, or prints in natural handwriting—creating a moment that's quiet, surprising, and powerful.

## The Book Test Reinvented

Ask a spectator to think of any word from a book—no writing, no prompting. Using voice recognition and Thumper inputs, Unifi Intelligence pinpoints the correct word with stunning accuracy. The reveal appears typed on their phone, printed in a notebook, or spoken aloud—feeling effortless, clean, and utterly untraceable.

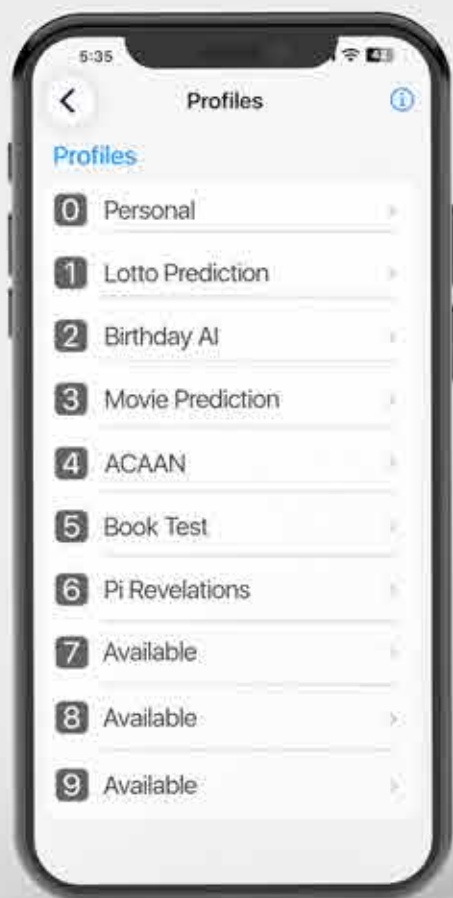

## Dream Destinations

Your spectator whispers a dream vacation. Seconds later, Unifi Intelligence prints a postcard with their name, destination, and travel details—beautifully rendered in handwriting on the Thermal Notepad. It's a visual and emotional moment they'll remember.

## Experience the Future of Magic

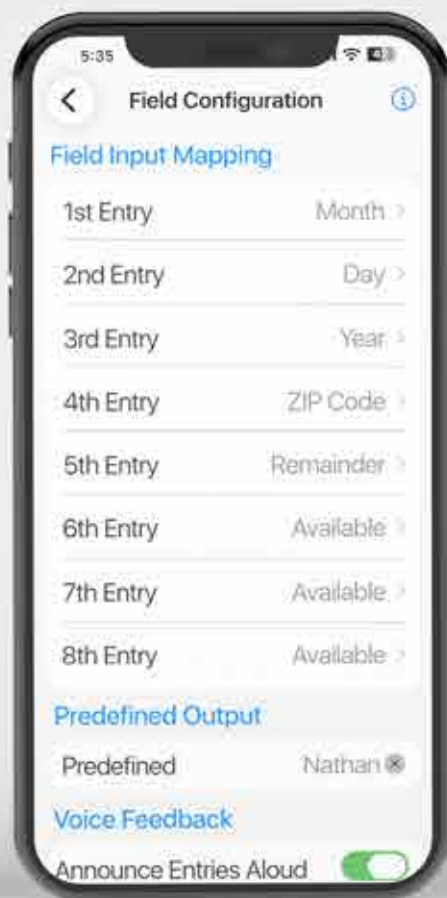

Unifi Intelligence isn't just an upgrade—it's a creative leap. By interpreting inputs and generating stunning outputs, it gives magicians a futuristic toolkit limited only by imagination. Whether through handwriting, voice, or connected apps, it brings magic to life with elegance and precision—creating moments that captivate and endure.

## PROFILE PRECISION

The Magician's Calculator supports up to ten customizable profiles, each tailored for unique effects like personal predictions or lottery reveals. Performers can configure fields like birthdays, ZIP codes, and PINs while selecting the information they wish to peek at or reveal. This offers unparalleled versatility for any routine

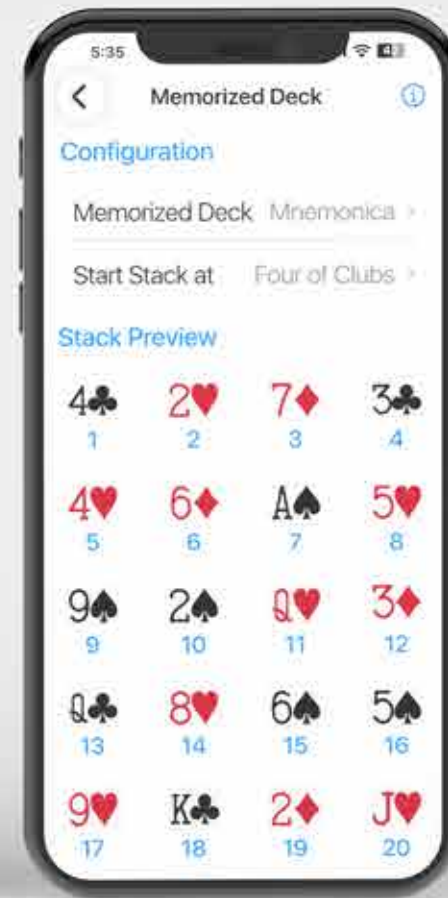

## ENDLESS FIELD OPTIONS

The Magician's Calculator offers customizable fields like day, month, year, PINs, ZIP codes, phone numbers, age, lotto numbers, serial numbers, and even card positions or suits. A built-in ZIP code database allows for location-specific predictions. Easily adapt inputs to suit any routine and elevate your impact.

## FLEXIBLE FORCE METHODS

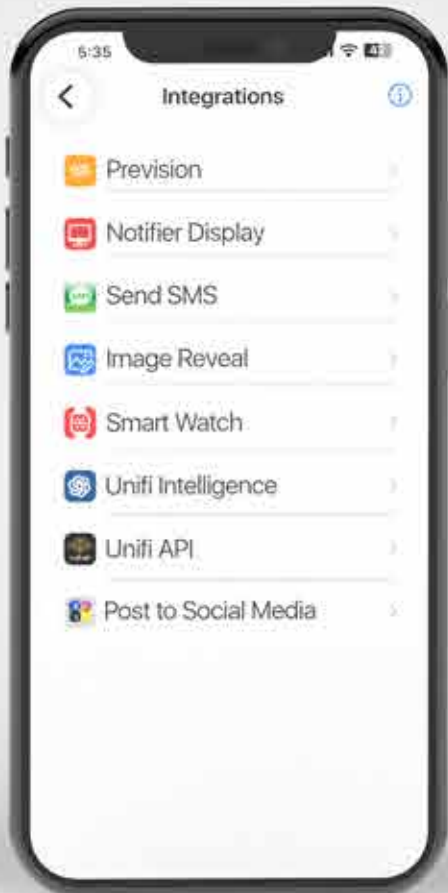

The Magician's Calculator offers versatile force methods, including predefined numbers (e.g., a phone number), the current time and date, or real-time updates via Inject or Impression Pads. For instance, a spectator's Inject search for a phone number can instantly become the force number, creating seamless and interactive revelations.

## MASTER CARD STACKS

The Magician's Calculator includes stacks like Mnemonica, Si Stebbins, Aronson, CHaSeD, and more. Instantly identify card positions or values and calculate accurate ACAAN instructions. Enter a card suit, value, and position, and let the app provide clear, step-by-step guidance for seamless, confident performances.

# MAGICIAN'S CALCULATOR

## INTEGRATIONS

The Magician's Calculator integrates with Pi Revelations, Prevision, time prediction devices, Scribe, Notifier, SMS, social media, and Unifi Intelligence. Instantly send SMS updates to a confederate for remote reveals or post results online. With image processing and Unifi, your performances gain unmatched sophistication and seamless flow.

## STANDARD CALCULATOR

The Magician's Calculator looks identical to the built-in iPhone calculator and includes international numeric formatting to support European users. All inputs remain completely hidden until a profile is activated, and you can secretly view the information directly on the iPhone screen—without arousing any suspicion.

## APPLE WATCH MAGIC

The Magician's Calculator syncs seamlessly with Apple Watch, giving instant access to your full pre-show history. Choose which details to view—like name, number, or star sign—and control the display order. The app calculates data such as birthday, zodiac, age, and location, delivering real-time insights for unforgettable performances.

## REAL-TIME NOTIFIER PEEK

The Magician's Calculator includes powerful peek options—most notably its patented Notifier integration. This real-time link sends data straight to your Notifier device, giving you discreet insights when it matters most. Choose which details appear and in what order to keep every performance seamless, personal, and polished.

# IMPRESSION PAD

## Invisible Insight, Instant Results

In mentalism and magic, knowing what your spectator writes—without them realizing—is a game-changer. Electronic impression pads, disguised as whiteboards, clipboards, or notepads, capture handwritten information in real time. What makes them extraordinary isn't just the stealth—it's the instant recognition and integration with the Unifi platform

## Seamless Integration Across Devices

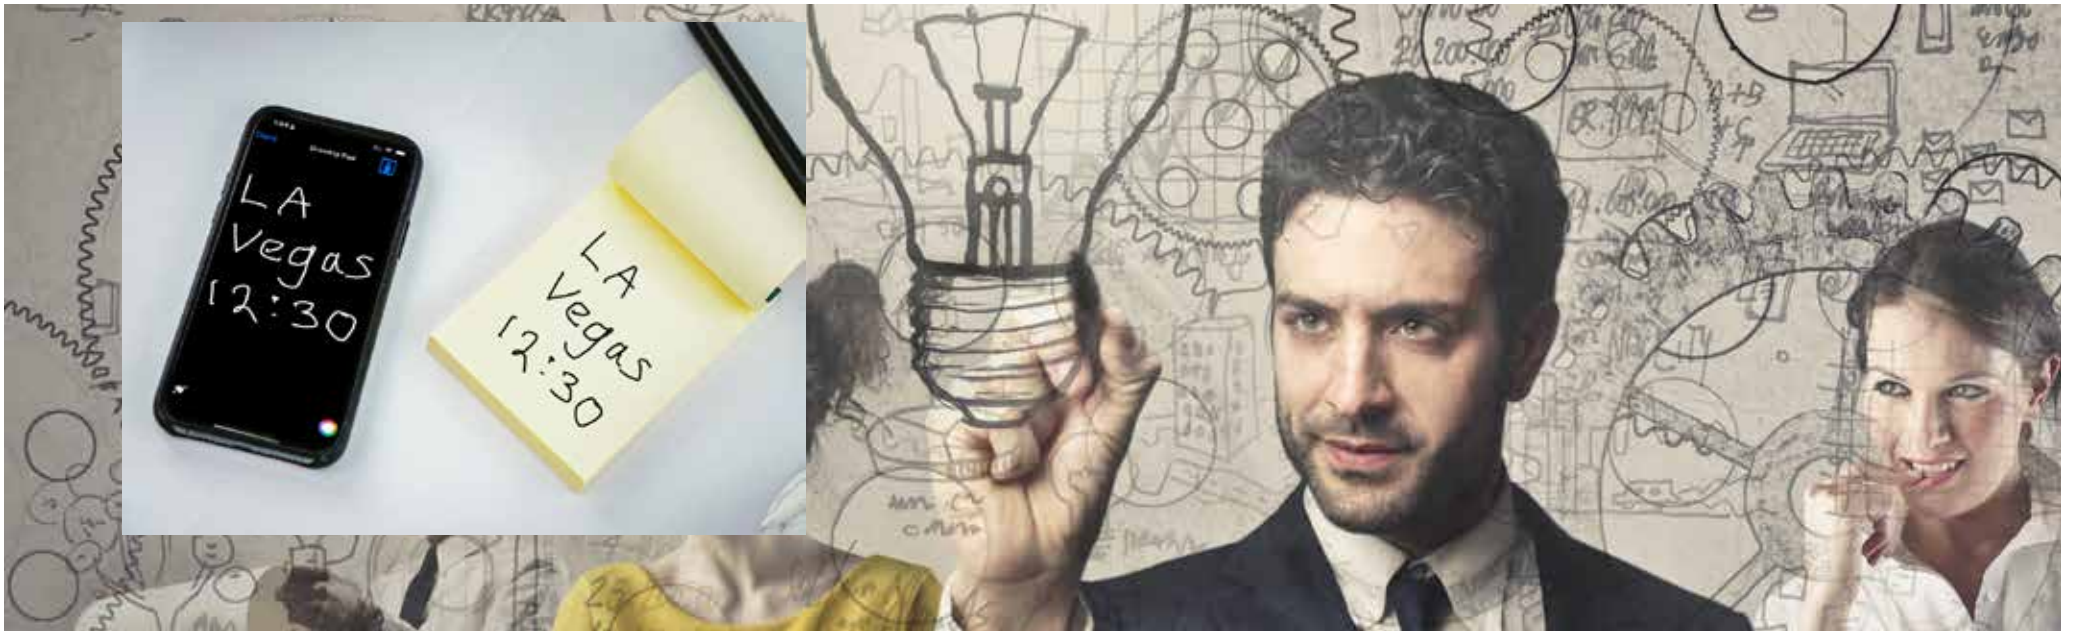

The Unifi App connects flawlessly with industry-leading impression pads, including Pitata Whiteboard & Memopad, ProMagic Academy, Engage Oblivious Boards, Audience Wonderland, and Wacom Bamboo Slate. These tools look innocent yet work silently behind the scenes to extract vital information, decode handwriting instantly, and trigger magical effects without a trace.

## Transform Handwriting into Real Magic

Once captured, the text becomes a springboard for endless effects. Print a boarding pass with Scribe. Reveal a movie ticket prediction. Set the time on your prediction watch. Trigger a custom image reveal. Unifi links the impression to your routines—turning a scribbled word into a stunning climax, customized in real time.

## Connected Magic Like Never Before

With the Unifi App, updates appear instantly on your Apple Watch or Notifier—giving you discreet, real-time access to what was written. You can send the recognized word to Prevision for video rendering, or forward it to the spectator's own device for a mind-bending interactive reveal. Combined with tools like the Magician's Calculator, the possibilities go far beyond peeking—you're rewriting what's possible.

# IMPRESSION NOTES

## Your Spectator's Phone. Your Secret Tool.

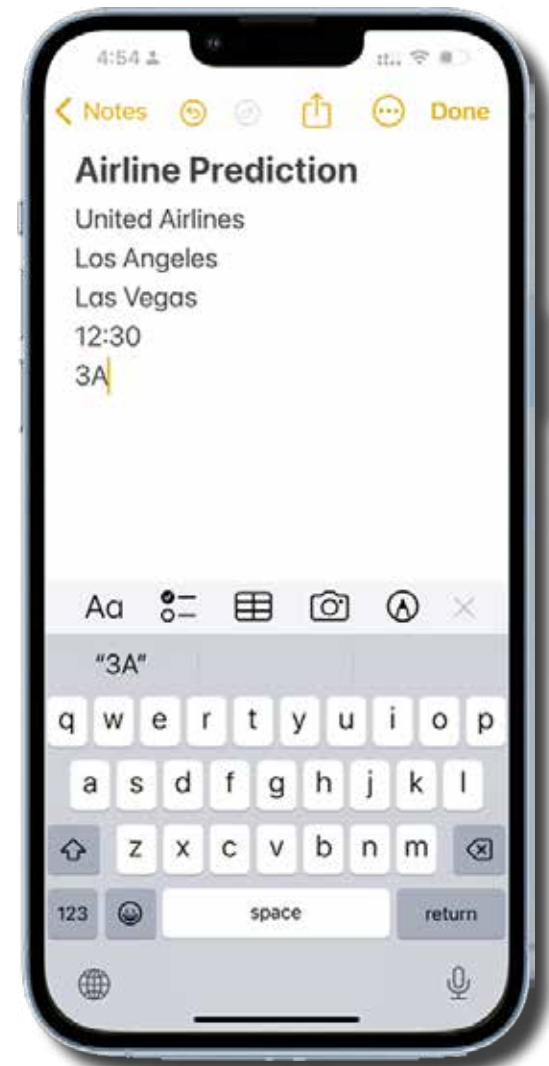

Impression Note transforms any iPhone into a covert impression pad in seconds—without downloads, apps, or suspicion. Activated via NFC tap or QR scan, it launches as a lightweight “App Clip,” cleverly disguised as a standard Apple Notes screen. To the spectator, it’s ordinary. To you, it’s a powerful information tool ready to capture anything they type. Fast, clean, and frictionless—it’s always with you, ready to go.

## Instant Input. Invisible Delivery.

The moment your spectator types a word, number, or phrase, their input is transmitted instantly to your preferred output—whether it’s a discreet Audio Peek in your earpiece, a visual cue on the Notifier, or a silent signal to The Thumper. You can even configure backups, so the text routes simultaneously to your Apple Watch, Unifi app, or Magician’s Calculator. Timing is everything—and this system delivers with absolute precision.

## Print It. Predict It. Perform It.

Impression Note pairs effortlessly with the full Unifi ecosystem. Route text directly to Scribe for thermal printing of tickets, receipts, or predictions. Push it into Prevision for cinematic video reveals, or trigger custom responses via SMS, Push Notifications, or even in-show teleprompts. For example: a spectator types “Flight to Paris, seat 4C.” Seconds later, a matching printed boarding pass appears from your pocket. It’s bold, clean, and impossible—just the way modern magic should feel.

# INVERSION BOARD

## Transform Any Input Into Visual Magic

The PITATA Inversion Board redefines prediction reveals—seamlessly turning digital inputs into spontaneous, believable magic. Whether triggered by voice recognition, Inject, the Magician’s Calculator, electronic impression pads, MindScale, or RFID dice, every input flows through the Unifi Image Editor and appears on the board in real time.

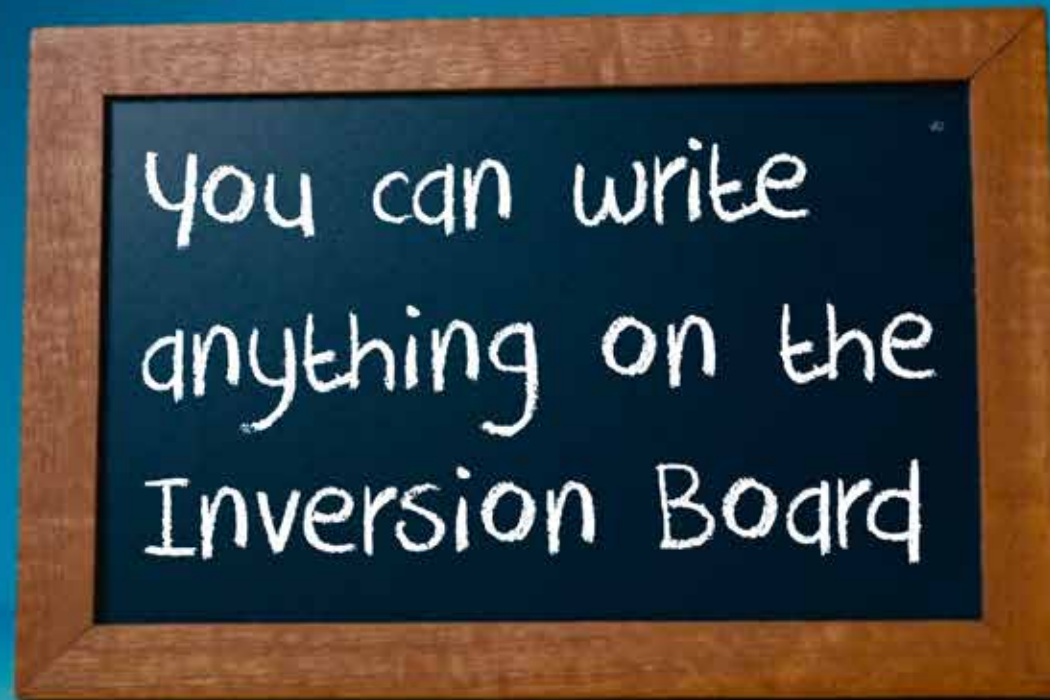

It supports a wide array of sources, including Swami Writers, lock screen emulators, and simulated sticky notes—offering unmatched creative flexibility. Once triggered, your prediction materializes instantly—bold, visual, and designed to be impossible to backtrack.

## The Look and Feel of Real Chalk

The Inversion Board doesn’t just display text—it creates the illusion of authentic, hand-drawn chalk. With soft gradients, subtle smudges, and natural imperfections, each reveal feels handmade and real.

Customize every element. Adjust fonts, textures, pressure, and timing. Use image masking for layered reveals. Animate strokes or delay writing for dramatic effect. Instantly transform typed words into sketches—or doodles into legible text.

Whether up close or on stage, the Inversion Board makes your reveals feel alive. It’s not just what they see—it’s what they believe is happening.

# FAKE LOCKSCREEN

## It Looks Like a Lock Screen.

## It Works Like a Trapdoor.

Built into the Unifi App, the Fake Lock Screen is a covert data capture tool disguised as a perfectly realistic iPhone lock screen. From the moment your spectator sees it, they're convinced it's your real phone. It looks right. It responds right. It even "fails" Face ID just like the real thing.

But when they enter a passcode—usually their own—you instantly receive the information. No alerts. No buttons. No tells.

## What It Does

Fake Lock Screen gives you total control over a familiar interface that spectators instinctively trust. You control the number of digits (4 or 6) that unlock the phone, and how the captured data is handled—all while maintaining a seamless, offline experience. You can even match your real lock screen with custom wallpapers and home screen images for total deception.

### What You Can Capture

- 🔮 Spectator's real PIN (often entered instinctively)
- 🔮 Magician's custom PIN (for dual reality)
- 🔮 Birthdate (DDMM,MMDD,DDMMYY, MMDDYY formats)
- 🔮 Zip or Post Code (built-in offline regional database)
- 🔮 Page/line numbers for book tests
- 🔮 Freeform entries (initials, codes, digits, etc.)

## Output Options

Clipboard, text-to-speech, Apple Watch, Thumper, or connected apps like The Stranger, Inject, Nexus, Flitch, Prevision. Need to go further? Push data to SMS, webhooks, or offline APIs using Unifi's custom endpoint engine.

All of this happens the moment the spectator finishes typing—no interaction needed from you.

## Why It Works

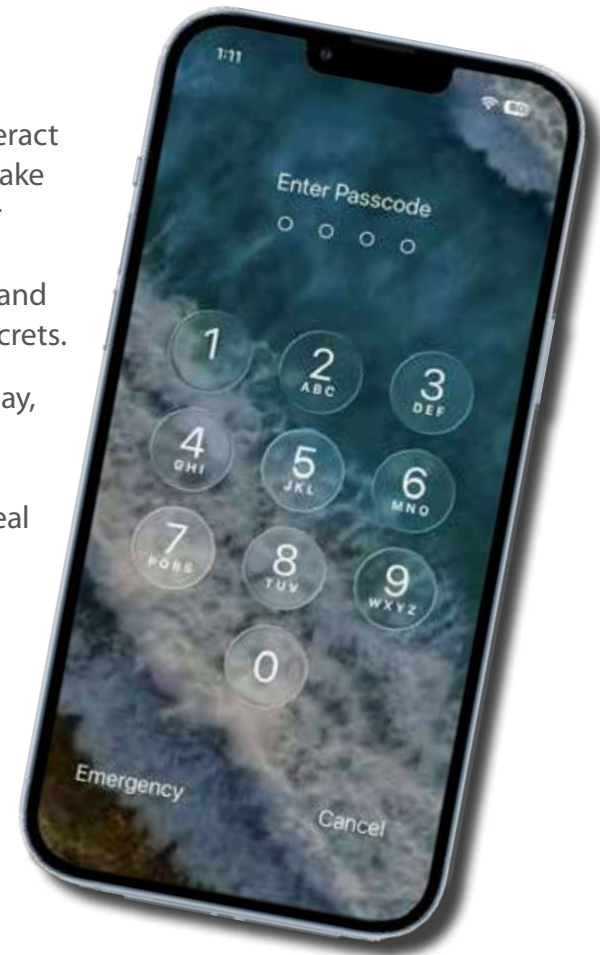

Spectators are conditioned to interact with their phones a certain way. Fake Lock Screen mirrors that behavior so convincingly, they never think twice. They unlock your phone—and unknowingly unlock their own secrets.

Whether you're revealing a birthday, postcode, or PIN, the method disappears inside the moment—giving you raw information and real reactions.

## Fake Lock Screen

They think they're unlocking your phone. You're unlocking their mind.

# BOOK TEST

## Total Control, One Step Ahead

The Unifi Book Test turns any ordinary book into a powerful tool for mind reading. Instantly access page numbers, lines, word positions—even full sentences—before the spectator finishes turning the page.

Every input is built for speed, flexibility, and total stealth. On stage, at home, or online, the Book Test works quietly in the background, giving you full control.

## Type. Know. Reveal.

At its core is a seamless input engine—fully integrated with The Thumper.

- Enter page, line, and word to reveal the exact word.
- Input just page and line to get the first, last, or longest word.
- Ask for a page to receive a key phrase or most visual word for a clean, natural reveal.

## Audience-Led. Performer-Controlled.

Unifi adapts to your routine, however you work.

A spectator writes a word on an impression pad? You know it.

They Google something using Inject? You get the page and position.

They say a word aloud? Unifi finds it instantly.

You can even reverse search: enter a word, and get its page, line, and position. Dual-direction indexing makes your options limitless.

## Silent Signals. Seamless Delivery.

Unifi gives you full control over how results appear.

- Peek silently on Notifier.
- Feel feedback through Thumper.
- Hear it with a Bluetooth earpiece.
- Print it on demand using Scribe.
- Ghost-type it onto a spectator's phone via Notes, Messages, or Lock Screen prompts.

## The Book Test, Reimagined

Reveal thought-of words. Reconstruct full sentences. Call out lines before they're read. The Unifi Book Test makes the method invisible—leaving only pure astonishment.

# SMS INTEGRATION

## Remote Reveals, Real-Time Reactions

SMS Integration transforms your magic by letting you send instant, automatic reveal details to your confederate's phone via text message. Whether they're in the same room or across the world, they'll receive exactly what they need to perform a flawless, perfectly timed reveal—during a live call, video chat, or in person. The moment something happens, they know.

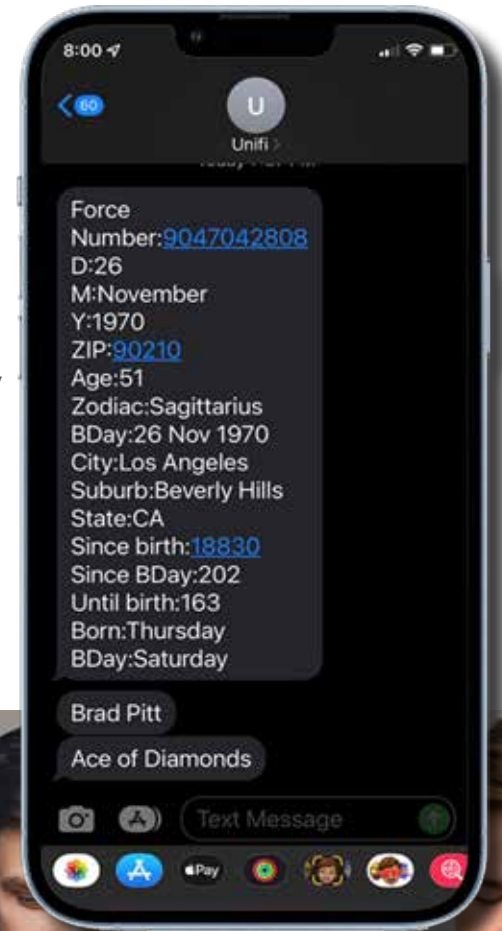

## Seamless with Every Device You Use

From Second Sight to PenSense Lite, MultiSense, ColorSense, and Unifi Dice, SMS Integration works with the entire Illuminati Magic lineup. Your confederate receives a custom message instantly when a device is triggered—no manual input required. Example: A spectator drops a card into a wooden box. Your assistant receives a text—"3 of Clubs." Moments later, they reveal it on a FaceTime call... as if reading your spectator's mind.

## Compatible Beyond Unifi

SMS Integration also works with trusted third-party tools:

- ◆ Promystic
- ◆ Spotted Dice
- ◆ InSight Reader by Hugo Shelley
- ◆ Kinetic Dice
- ◆ Inject, WikiTest, Cognito
- ◆ Magician's Calculator

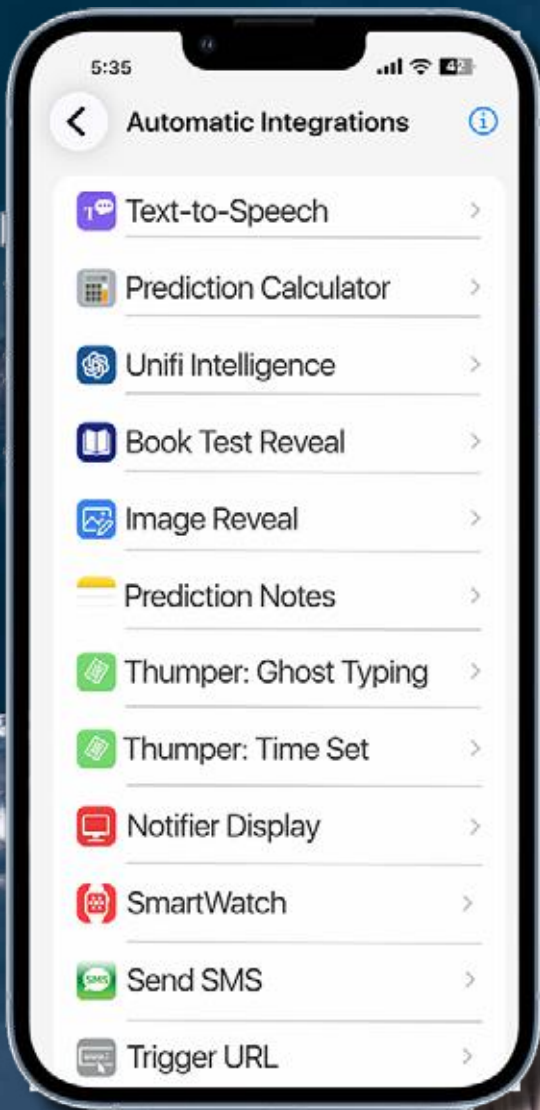

# INTEGRATIONS

## Software Integrations

Cognito	Cognito, developed by Lloyd Barnes & Owen Garfield, is a revolutionary magic App that enables performers to discern a spectator's thought without any physical cues or prompts. The App supports seamless integrations with image processing, printed predictions, SMS output, and advanced Prevision video reveals.
ELIPS	ELIPS, created by Maxime Hélier, allows magicians to identify any word a spectator thinks of from the lyrics of any chosen song. The app integrates seamlessly with Notifier for real-time visual displays and supports image processing, printed predictions, SMS output, and Prevision connectivity.
Flitch	Flitch, designed by Fabien Klesse, is a magic app and web service that generates high-resolution, photorealistic images for magical revelations and visual storytelling. It offers a curated library of image reveals and accepts inputs from Second Sight (NFC), Web Messaging, and other third-party integrations.
Inject	Inject (Rostami Magic) is a Magic App and web-based service that allows you to know exactly which search term a spectator is searching for on their phone. The revealed term appears on Notifier and is compatible with image processing, thermal and color printing, SMS output, and Prevision integration.
Pi Revelations	Pi Revelations, developed by David Penn, is a magic app paired with a printed book of Pi, extending accurately to 50,000 decimal places. The Unifi App can determine the exact page, line, and character offset where any four-digit number appears using inputs from the Magician's Calculator or Inject.
Prevision	Prevision, created by René Nijman, is a real-time cloud video rendering service that produces photorealistic videos for magical revelations with cinematic precision. It accepts inputs from many sources, including the Magician's Calculator, Dice, Second Sight/NFC, Inject, InSight, Kinetic Dice, WikiTest, and ELIPS.
WikiTest	WikiTest (Marc Kerstein) is a Magic App and web platform that lets you know which specific search term a spectator selects while browsing Wikipedia™. That term is instantly displayed on Notifier and may also be used for image processing, thermal and color printing, SMS output, and Prevision rendering.
The Stranger	The Stranger, developed by Jonathan Levit, allows performers to call a live stranger in real time for interactive magical reveals—or use pre-recorded conversations. It enables the magician to reveal information such as a chosen playing card or an object nearby, adding realism and unpredictability to every performance.

## Hardware Integrations

Promystic™	The Thumper, Notifier, and the Unifi App integrate effortlessly with a wide range of Promystic devices. These include the Real Die, Real Domino, Color Match, Color Match Pocket, Scan 3D, Zodiac Die, ESP Cube, Multidimensional, and the Multidimensional Mini.
Insight	Insight (developed by Hugo Shelley) is a compact NFC Reader designed to scan specially tagged NFC Playing Cards during a routine. Insight connects directly to the Unifi App, with NFC scans supporting real-time image processing, thermal or color printing of predictions, SMS output, and advanced Prevision video integration.
Kinetic Dice	Kinetic Dice (Marc Antoine) are powerful RF-enabled dice that identify both the color and result of each roll with pinpoint precision. Results are instantly displayed via the Notifier and Unifi App and can also trigger spoken reveals using Text-to-Speech for hands-free performance enhancements.
Spotted Dice	Spotted Dice (András Bárházi) are Bluetooth-enabled dice that track and transmit both the color and rolled value of the die. The results are displayed on the Notifier and within the Unifi App, with optional spoken output delivered through Text-to-Speech for real-time audience interaction.
Timepieces	The Unifi platform also integrates smoothly with time prediction devices from Kronaby, Fossil, S&B, iArvel, Pitata, and Turner. These integrations allow for a variety of time-based effects—from manually entering the time via Thumper, to dynamically setting the time using rolling electronic dice—all without ever breaking the illusion.
PITATA	The Unifi App fully supports the complete range of PITATA Electronic Impression Pads, Inversion Board, SmartWatches, and SmartScale—ensuring seamless integration and intelligent performance across every device.
