OF TRUSTED VALVES

WELCOME TO OUR SPRING EDITION OF GO WITH THE FLOW

“

In this article, we'll focus on Valves Online and their recent takeover, examining what it means for the company's future.

Valves Online is a leading supplier of industrial valves, serving a wide range of sectors such as process and industrial industries, chemical processing, food, beverage and water treatment. The company has been on a steady growth trajectory in recent years, thanks to its commitment to innovation, competitive prices, quality, and customer service.

Over the last few years, we have invested in new technology and processes, including the development of a custom-built valve assembly and testing facility. This facility allows the company to assemble and test valves to customers' exact specifications, ensuring that they are delivered quickly and ready to use and meet the highest standards of quality and performance.

In January 2023, Valves Online made headlines when it announced that it had been acquired by a larger conglomerate The R&G Group. Whilst this was a surprise to many industry experts, as Valves Online had been performing well independently, it was a positive next step, as the new parent company has a strong track record enabling Valves Online to tap into new markets, expand its product range, and benefit from the parent company's expertise and resources.

So what does this mean for the future of Valves Online? In the short

term, customers can expect business as usual, with the same level of quality and service they've come to expect from the company. However, in the long term, we can expect to see significant benefits as Valves Online increase its product range, stock availability and more efficient interaction with our superb web sites.

In conclusion, the takeover of Valves Online by R&G Group is a significant event that will shape the company's future, continuing its reputation as a trusted supplier of industrial valves, with a loyal customer base.

WRAS APPROVED RESILIENT SEAT GATE VALVE

With a fusion bonded epoxy coating, this gate valve is specifically designed to withstand harsh underground environments. Its maintenance-free design and WRAS approval make it a worry-free addition to your system.

But that's not all – this gate valve also boasts a temperature range of -10°C to 70°C and a pressure rating of PN16. And with sizes ranging from 2" to 12", it's sure to fit your specific needs.

THE ARI- STEVI VARIO GLOBE CONTROL VALVE

Ultra fast deliveries on this versatile, cutting-edge valve for the precise control of flow in various commercial and industrial applications. Its advanced design and materials guarantee reliable performance and unparalleled precision, cutting edge design and accurately engineered for optimal efficiency.

Working in conjunction with our electro-pneumatic controller, it offers one of the best units in the market!

ONE OF A KIND

A compact and efficient design that offers numerous benefits over other control valves in the market. The compact design allows for a small footprint, reduced weight, and rotatable upper part, making it easy to handle and install in tight spaces.

One of the key benefits of the ARI-STEVI control valve is its long life stem seals that have been proven millions of times over. This ensures a reliable and durable operation over the lifetime of the valve.

Additionally, the flexible changeable trims of the valve offer multiple Kvs values per body size, providing greater flexibility in selecting the appropriate valve for different flow rate requirements.

GROWING GREENER WITH VALVES ONLINE

At Valves Online we're excited to bring some more greenery to our Devon office and warehouse space! We took the opportunity to plant over 20 Plena Trees around the perimeter of our office space.

The Plena tree is renowned for its capability of attracting pollinators, such as bees and butterflies to its

surrounding environment. This aids to support local ecosystems and promote biodiversity.

The Plena tree also has the capacity to provide an umbrella of shade during hot summer months, supporting in reducing energy costs associated with cooling buildings!

WITHSTAND THE HEAT!

Look no further than our Digital interface Thermometer Gauge! With its high accuracy and excellent repeatability, this battery-operated unit can withstand temperatures up to a whopping 200°C!

With its 4 digit LCD display and non parallax error, you're guaranteed to get a clear and accurate reading. Whether you need a stem or capillary gauge, or one for hygienic processes, we've got you covered.

A DAY IN THE LIFE OF...

Judi Price

Let's give a warm welcome to Judith, our newest team member and accounting extraordinaire! With her passion for sports and the great outdoors, we're confident she'll bring a fresh perspective to our team. We can't wait to see how Judith's expertise will help us tackle our goals and set new benchmarks!

What is your day-to-day life like at Valves Online?

I am thoroughly enjoying my varied role within the accounts department, surrounded by lovely colleagues and a pleasant working environment.

What do you like to get up to in your free time?

During my free time, I enjoy crafting, gardening, spending time with friends, and doting on my beloved feline companion.

What is your one guilty pleasure?

Indulging in guilty pleasures is a must, and for me, that includes binge-watching my favourite Netflix series.

PUTTING THE SOUTH-WEST BACK ON THE MAP

Valves Online is a company that has been quietly helping to revitalize the South West by supplying local businesses with valves. Based in Plymouth, we are one of the largest suppliers of valves in the UK and have been providing reliable, high-quality valves to businesses across the region for over two decades.

One of the ways in which we strive to put the South West back on the map is by supporting local businesses, big or small. We work closely with manufacturers, engineers, and other industry leading professionals in the region to provide them with the valves and equipment they require. This has

helped to create a strong network of businesses in the area, with Valves Online at the center.

Alongside Plymouth's strong Naval presence in the UK, we also firmly believe that Devon, Cornwall and the surrounding area will be the epicentre for green energy.

Water Treatment and Anaerobic Digestion Plants are two prime examples of our commitment to meeting the high demands of a sustainable region. We strive to continuously improve and deliver their precise requirements, ensuring that we contribute to the vital work of these industries.
