

NEURO CALM PRO

Neuro Calm Pro is a supplement that helps support healthy hearing in a completely natural way.

What is Neuro Calm Pro?

Neuro Calm Pro is a scientifically validated, all-natural dietary supplement that, according to the manufacturer, targets the fundamental cause of tinnitus: poor brain wiring. How might one go about resolving such a problem? Not only are brain networks targeted by Neuro Calm Pro, but also the hair cells in our ears and the whole nervous system. Individuals are anticipated to be relieved of the incessant ringing, buzzing, and whooshing noises in their ears by focusing just on these regions. Before delving into the specifics of the Neuro Calm Pro recipe, it is important to understand the relationship between the ear and brain, as well as the function of hair cells, among others.

How does Neuro Calm Pro work?

As noted briefly before, Neuro Calm Pro seeks to correct the brain's nerve network so that it can process and decode noises. Interestingly, there is more information that folks must be aware of. According to the Mayo Clinic, the most prevalent cause of tinnitus is really inner ear hair cell destruction.

The sensory receptors of the auditory system are hair cells. These cells, also known as cochlear cells, sense sounds and transform them into electrical impulses. Once this is accomplished, they are sent to the brain through the auditory nerve (located in the temporal area). The brain and its countless nerves turn the impulses into the sounds we are most familiar with.

The problem that causes tinnitus is the failure of hair cells to generate correct electrical impulses. Due to the unpredictability of the impulses, the brain attempts to interpret the noises it hears, which may vary from ringing and buzzing to clicking and ocean waves, to name a few.

What chemicals are included in Neuro Calm Pro?

Compared to other nerve support supplements, Neuro Calm Pro looks to have an extensive list of components. We were astonished by the unique components that serve as the basis of this formula, so we sought to determine what factors contributed to their inclusion on the list. The following is a summary worth reviewing:

Extraction of Fenugreek (219mg)

Fenugreek is a plant native to the areas of the Mediterranean, Southern Europe, and Western Asia. Its seeds are often used in cooking and traditional medicine. Although research on the relationship between fenugreek and tinnitus is limited, the substance seems to be a mainstay in Ayurvedic therapy. According to Ayur Clinic in Melbourne, the herb (to be eaten as a tea) may shift Vata (associated with movement, such as breathing, blinking, muscular movement, etc.) downwards.

Saw Palmetto (168mg)

Saw palmetto is a Southern American palm species. Its berries are lauded for their medicinal properties, which may explain why it was included in Neuro Calm Pro. According to the National Center for Complementary and Integrative Health (NIH), this component may cure

reproductive dysfunctions, urinary complaints, and enlarged prostate glands. Unfortunately, the relationship between this and tinnitus seems to be understudied.

Fennel Seeds (162mg)

Fennel is a kind of flowering plant in the carrot family. It is claimed that both the plant and its seeds are rich in nutrients (i.e. vitamin C, manganese, magnesium, calcium, etc.). The authors of a comprehensive 2014 study of fennel seeds assert that it has been used to treat "digestive, endocrine, reproductive, and respiratory systems." In fact, they go so far as to certify its safety and deem it a "essential dietary component." Obviously, its impact on tinnitus has not yet been explored, but as an antioxidant, it may be able to remove one of the inflammations associated with poor brain wirings. Obviously, the latter is only a supposition based on the qualities of the substance.

L-Tyrosine (135mg) (135mg)

According to Mount Sinai, L-Tyrosine is a non-essential amino acid that plays a crucial part in the creation of neurotransmitters (such as adrenaline, norepinephrine, and dopamine). Tyrosine has been examined and verified to decrease stress, depression, and, to a lesser degree, phenylketonuria, according to Peace Health's summary of the available research. Primarily, it boosts brain neurotransmitters, which enable nerve cells to communicate effectively.

Chinese Wild Yam (96mg)

In alternative medicine, Mexican wild yam (or diosgenin) is often utilized as a potential treatment for estrogen, vaginal dryness, and low sexual desire, among other conditions. Many are unaware that it may have an important function in the brain (at least based on limited findings). The anxiety symptoms of ovariectomized rats were reversed, according to a 2007 research that examined the effects of wild yam (a Chinese medication) on their emotional behavior and interleukin-2 levels in the brains.

Pacific Kelp (90mg)

Recent attention has been drawn to kelp due to its high antioxidant content, which is vital for eliminating free radicals and oxidative stress. Thus, one's cardiovascular health may be safeguarded, according to HealthLine. A 2015 research that looked at the protective effects of dieckol (a form of phlorotannin polyphenolic molecule in brown algae) on drug-induced ototoxicity (related to hearing loss, tinnitus, or balance difficulties) discovered data indicating that dieckol may operate as a therapeutic agent. The authors believe that it can mitigate any ototoxicity-related side effects.

Keep in mind that this is the most recent research available on kelp. Even while there is proof on dieckol, it does not necessarily follow that kelp will provide the same outcomes.

Damiana Leaf (51mg)

According to an article published in Healthy Beginnings Lifestyle Magazine, damiana leaves are located on a little shrub and have historically been used "to boost the sexual abilities of the weak and elderly." Asthma, anxiety, and headache sufferers may also see an improvement in their health. However, there is very little proof in these areas, and regrettably the same is true with tinnitus.

Dong Quai (48mg)

Dong quai, also known as *Angelica Sinensis*, is a plant in the same family as carrots and celery. This is a typical substance used in traditional Chinese medicine to treat, among other conditions, PMS, high blood pressure, chronic pain, and constipation. Regarding its tinnitus-related advantages, dong quai is said to have the capacity to enhance blood flow to the brain, which might treat "migraine headaches, blurry vision, and tinnitus." The latter seems to be based more on traditional applications than scientific evidence.

An Extract of Motherwort (48mg)

Motherwort is a herb that has been used to improve heart health for centuries. According to Peace Health, motherwort has the ability to treat amenorrhea, anxiety episodes, and menopause. It is most often used in European folk medicine and traditional Chinese medicine.

Extract of Black Cohosh Herb (45mg)

It seems that black cohosh extract (produced from a blooming *Ranunculaceae* plant) treats PMS, brittle bones,

and other chronic illnesses, like many of the components that made the cut. According to a passage in Richters, "black cohosh dilates blood vessels, hence increasing circulation to the extremities (arms, legs, and head)." Like dong quai, this chemical may also cause tinnitus.

Oat Grass (42mg)

Oat grass is a hybrid of perennial plants from the Arrhenatherum and Danthonia families. According to the Baseline of Health Foundation, oat grass has an abundance of antioxidants and may induce calming effects. In addition, the article argues that it may improve brain function so that attention is obtained when completing certain activities and reduce stress.

Sacred Thistle (39mg)

According to WebMD, blessed thistle, a member of the milk thistle family, has been used to treat appetite loss, indigestion, and diarrhea, among other conditions. In the middle of the twentieth century, according to Encyclopedia.com, blessed thistle was deemed "Good for all organs of the body, particularly the heart and brain." As just a few research have been completed on blessed thistle, it is unknown whether this has been examined

(especially in comparison to milk thistle, both of which are different in many ways).

Hops Extract (30mg)

Hops extract is the last herb to have made the cut. According to a 2012 research on the calming effects of hop on activity/rest rhythm, 2mg of hop extract may reduce nighttime activity in the circadian activity cycle. The capacity to induce sleep may help patients bear the consequences of tinnitus; however, this has not been verified.

Is Neuro Calm Pro a safe supplement?

The components in Neuro Calm Pro are all-natural and hence less prone to create negative effects. Additionally, Gerard maintains that the formula does not induce dependencies, which is reassuring given that this would ordinarily be a concern for customers. Regarding the production procedures, precise rules were adhered to. Everything was made at an FDA-approved and GMP-certified facility in the United States.

How much does Neuro Calm Pro cost?

Neuro Calm Pro is now available for the following prices (in USD):

1 bottle (1-month supply) costs \$69 per unit.

Each bottle costs \$59 (3-month supply).

Each bottle costs \$49 (6-month supply).

Final Verdict

Nerve Calm Pro is promoted as a nerve support that may improve the capacity of customers' hair cells and brains to understand familiar noises. Longtime researcher Gerard Watson relies on old Chinese, European folk, and Ayurvedic medical methods, all of which are known even today. Unfortunately, tinnitus is incurable, so when the chemical list was evaluated, there was very little scientific proof available.

Gerard seems to have placed a lot of emphasis on components with antioxidant and anti-inflammatory characteristics, which may aid to rid the body of foreign invaders that inhibit the brain from functioning at its optimal. In addition, some seem to improve blood circulation, which may again improve brain function.

To our surprise, none of these components seem to improve the function of hair cells, which looks deceptive. In addition, it is unclear how the corporation contributed to the production procedures. This often aids customers in comprehending overall purity and quality. While it is said that a seasoned researcher is at the vanguard of this formula, little information is provided about his background.

Before proceeding, all of these ambiguities must be cleared with customer support. As a society, we lack adequate knowledge as to what treatments for tinnitus are effective and ineffective. Consequently, the latter is vital. To find out more about Neuro Calm Pro, please [click here](#).

The image displays three product bundles for Neuro Calm Pro, each featuring a box and a bottle of the supplement. The 'BASIC' bundle includes 1 bottle for \$69. The 'BEST VALUE' bundle includes 6 bottles for \$49 each, with a total price of \$294 (crossed out from \$414). The 'MOST POPULAR' bundle includes 3 bottles for \$59 each, with a total price of \$177 (crossed out from \$207). All bundles include a 'Digital Sound Therapy Protocol' and offer 'Free US Shipping'.

Package	Price per Bottle	Quantity	Total Price	Original Price
BASIC	\$69/bottle	1 Bottle	Total : \$69	
BEST VALUE	\$49/bottle	6 Bottles	Total : \$294	\$414
MOST POPULAR	\$59/bottle	3 Bottles	Total : \$177	\$207

Each bundle includes a 'Digital Sound Therapy Protocol (Digital Only)' and a 'Buy Now' button. A truck icon indicates 'Free US Shipping' for all packages.
