ANDINAS

Divider

ames
exclusive

Concealing and revealing at once, the Andinas room divider is a spectacular accent piece designed by Mae Engelgeer. The Dutch designer translated the varied landscapes of the large Huila region into a hand-woven pattern combining colored recycled PVC strings and natural fique fibers held by an asymmetric metal frame. Its color compositions are inspired by the snowcapped mountain peaks of the Andes, sandy deserts, the springs of the majestic Rio Grande Magdalena and the green Caribbean coast.

Designer	Mae Engelgeer
Product Type	Divider
Material	Galvanized and powder coated tubular steel. PVC strings made from recycled plastic or leather

BALCONES

Rug

Balcones Rugs, designed by Sebastian Jauregui Calderón, infuse interiors with lively, vivid patterns inspired by Colombian cityscapes. Referencing traditional balcony door frame motifs in historic cities like Bogota and Cartagena, these hand-woven rugs playfully incorporate European colonists heritage with Andalusian and Mozarabic influences, adding a Creole twist. The Balcones rugs, crafted from soft virgin wool, showcase captivating ombre effects capturing the serene sunset hours. With eight intriguing patterns, the collection offers variations from neutral to vibrant color schemes.

CABUYA Rug

△
index
ames
vibrant living

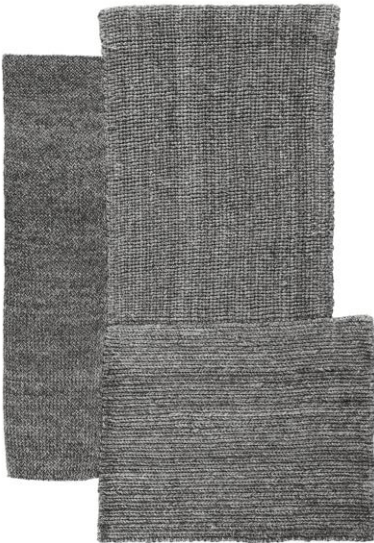

CABUYA

Rug

Each rug is produced by hand in our partner workshops in Santander, a Colombian region with a long tradition of working with fibres made from the leaves of the fique plant. These fibres are dyed with mostly natural ingredients, such as nuts, roots and bark from trees. To create the rug, the skilled artesanos use three different manufacturing techniques: two of the three pieces of each rug are tied and knotted by hand in a vertical loom – the combination of double knotting and unique knitting creates a special structure. The third element of Cabuya is needlework executed with two large knitting needles. Alone the preparation of the fibres – which includes harvesting, drying, brushing and spinning – takes up to seven days, while the artesanos and artesanas work 20 days on producing the final rug.

Care Instructions

Please use a professional cleaning services for this product. The dimensions can vary minimally as each cushion is made by hand. Do not alter it yourself, as this culd damage the fabric irreversibly.

CABUYA

Cushion

The Cabuya cushions follow the eponymous rug collection, designed by Sebastian Herkner. The long-standing friend of ames translated the contrasting landscapes of the Colombian Santander region into an exquisite textured textile design. The deep canyons, vast deserts and lush green mountains are the inspiration behind Cabuya’s earthy, grounded colours that highlight the complex structures in the fabric.

CANA

Stool

ames
exclusive

It takes many steps of manual labour to create the stool's seat. First, the caña flecha leaves are dried and the veins removed with a knife and a piece of leather to create sturdy strips. These are then dried in the sun before they are coloured with natural dyes. Then the artisans braid each seat by hand. The frame of the stool is made of powder-coated steel. Just the preparation of all the caña flecha takes three days, while the production of each stool takes four days.

Care Instructions

Wipe clean with a damp cloth (do not use scratchy materials like a steel scourer) and gentle soap. You can also hose them down with water. To protect the colours, avoid exposing the product to direct sunlight over long periods and store indoors during winter. Fitted cover sold separately. If the product is exposed to sea air, wipe the frame regularly with a damp cloth.

CARIBE

Low Side Table

Each table is made in Santa Marta, a city on the Caribbean coast of Colombia, by local craftspeople. They weave the PVC strings, which are made from recycled plastic, around the tubular steel frame. The weaving technique the artesanos and artesanas use is called Momposino, a traditional method known for intricate patterns. Just the preparation of all the materials takes ten days, while the production of each bench takes six days.

CARIBE CHIC

Basket 3 - Large

Each basket is made in Santa Marta, a city on the Caribbean coast of Colombia, by local craftspeople. They weave the PVC strings, which are made from recycled plastic, around the tubular steel frame. The weaving technique the artesanos and artesanas use is called Momposino, a traditional method known for intricate patterns. Just the preparation of all the materials takes ten days, while the production of each bench takes six days.

CARIBE NATURAL

2 Seater Bench

The craftspeople in the ames ateliers use an exceptionally intricate weaving technique to create the Caribe Natural pieces. The result is a particularly dense webbing made from the roots of the Bejuco, which wraps around the seat, back or table base. This vine-like plant grows in the Eje Cafetero, the coffee-growing region of Colombia, where people use it to make baskets to collect coffee beans.

CARTAGENAS

NATURAL

Side Table Mirror

Ames introduces a new material to the popular Cartagenas furniture series from Sebastian Herkner: wicker. This natural material reinvents the chairs of the series, giving them a warm and calm presence. In Colombia, there's a long history of using wicker to craft the baskets for the arrieros, the coffee pickers, who use them to collect the coffee beans.

Care Instructions

Wipe with a wet cloth. Do not use chemical cleanser. To preserve the original finish, avoid leaving in direct sunlight for extended periods of time. To preserve the original finish we recommend to keep the product away from water sea, If the product is kept near the sea, it is recommended. To clean it regularly with a soft cloth only using water. Prolonged exposure to sunlight may alter colour tone and may even cause discolouring

CARTAGENAS NATURAL

Coffee Table – Mirror

Ames introduces a new material to the popular Cartagenas furniture series from Sebastian Herkner: wicker. This natural material reinvents the chairs of the series, giving them a warm and calm presence. In Colombia, there's a long history of using wicker to craft the baskets for the arrieros, the coffee pickers, who use them to collect the beans on the plantations in the country's hinterlands.

CATTLEIA

Wall Decoration

ames
exclusive

Cattleia is made in Atlántico, a province in the north of Colombia. The artesanas, as the craftswomen are locally known, use century old weaving, knotting and braiding techniques to transform the palm fibers into delicate lacelike ornaments. Both the craft and the patterns have been handed down over generations from one artisan to the next. Today, there are more than 65 different patterns in the region. Just the preparation and dyeing of all the fibers take up to five days, while the women work between 20 to 25 days on one piece.

Designer	Cristina Celestino

Care Instructions

Place the blanket in a laundry bag. It can be machine washed on a cold delicate cycle with similar color, but we recommend dry cleaning if possible. Only use wool wash detergents. Do not tumble dry and let dry flat. The dimensions can vary minimally as each blanket is made by hand. Do not alter it yourself, as this could damage the knotting.

CHOCO Vase

CHOCO

Vase

Each vase is manufactured in the Boyacá region, situated 2,400 metres above sea level in the Colombian Andes. This area has a long tradition of transforming the fibres from the leaves of the fique plant into beautiful objects. Very thin strands of these fique fibres are wrapped around bundles of sturdier fibres so that each ring of the vase features delicate lines, resulting in a textured surface.

The dyes used on the fibres have primarily natural ingredients, such as nuts, roots and bark from trees, all native to the region. Even in Colombia, these traditional handcrafting techniques have become a rare skill, making Choco an extraordinary accessory.

Excl. VAT	€ 696,64	€ -	€ -	€ -
Incl. VAT	€ 829,00	€ -	€ -	€ -

Care Instructions

Wipe clean with a damp cloth (do not use scratchy materials like a steel scourer) and gentle soap. You can also hose them down with water. To protect the colours, avoid exposing the product to direct sunlight over long periods and store indoors during winter. Fitted cover sold separately. If the product is exposed to sea air, wipe the frame regularly with a damp cloth

CIELO

Footstool

Each footstool chair is made in Santa Marta, a city on the Caribbean coast of Colombia, by local craftspeople. They weave the PVC strings, which are made from recycled plastic, around a powder coated tubular steel frame.

The weaving technique the artesanos and artesanas use is called Momposino, a traditional method known for intricate patterns. Just the preparation of all the materials takes ten days, while the production of each chair takes two days.

Incl. VAT	€ 1031,00	€ -	€ -	€ -

Care Instructions

Wipe clean with a damp cloth (do not use scratchy materials like a steel scourer) and gentle soap. You can also hose them down with water. To protect the colours, avoid exposing the product to direct sunlight over long periods and store indoors during winter. Fitted cover sold separately. If the product is exposed to sea air, wipe the frame regularly with a damp cloth.

CIRCO

Flower Pot 4

Each table is made in Santa Marta, a city on the Caribbean coast of Colombia, by local craftspeople. They weave the PVC strings, which are made from recycled plastic, around a powder coated tubular steel frame. The weaving technique the artesanos and artesanas use is called Momposino, a traditional method known for intricate patterns. Just the preparation of all the materials takes 20 days, while the production of each chair takes two days

DICHAS

NATURAL

Natural Basket 1

ames presents a new take on the Dichas collection, designed by Cristina Celestino: this basket now comes with a webbing made from natural wicker. The beautiful storage piece will enrich any interior with the calm beauty of its natural material, which is gently enhanced by the intricate texture of the webbing.

The Dichas collection combine a simple steel frame with ornaments and a webbing woven with the roots of the Bejuco plant. In Colombia, there's a long history of using wicker to craft the baskets for the arrieros, the coffee pickers, who use them to collect the beans on the plantations in the country's hinterlands. The basket can be used as a smart planter or storage unit for cushions, glasses or towels.

FIBRA Basket

△
index
ames
vibrant living

FIBRA

Basket

Each basket is handwoven in Colombia using Esparto grass. This grass grows wild in the Colombian highlands, starting from an altitude of 2,600 meters. After it’s cut, the grass is dried and dyed, using mainly natural pigments. Just this preparation of the grass takes seven days, while the actual weaving is done in three to six days, depending on the size of the basket

GUAPI CACTOS

Vase

Each Guabi Cactus vase is made by hand in ames ateliers in the Colombian capital Bogota. The young craftspeople were involved in months-long development of this unique product, as they suggested and tried different weaving techniques, showing Mae Engeleer and the ames creative team various options to bring their drawings to life. .

GUAPI

Vase

The Guapi vases, designed by Mae Engelgeer, enrich every space with their eccentric, sculptural shape and structured, gently shimmering surface. Initially launched in natural beige, the two new editions come in a hazy denim blue and dusty pink.

KILLA

Wall Mirror Round

Each mirror is made in the Departamento Nariño in South-West Colombia, where working with the natural material Iraca has a long tradition. The preparation of the material takes six days, and the weaving of the decorative frame additional six days. Historically, the artesanos weave hats, bags, purses, ornaments and individual one-of-a-kind pieces with the fibres of the palm.

The material holds its shape and is very durable. The fibres are dyed using natural methods with seeds, leaves, nuts and roots, and some mineral materials are also used to create different colour sections. Following the dyeing process, the fibres are drained and afterwards need to dry for several days. Only then can the artesanos process the material. With the help of tweezers, needles and tongs, they weave the frame by hand, using different types of stitching.

Side Table 1

The tables and pots are made in the Boyacá region, which is situated 2,400 metres above sea level in the Colombian Andes. This area has a long tradition of working with the fibres made from the leaves of the fique plant.

The fique fibres are woven by hand, and a sturdy part of the fique plant is used as a frame. The dyes used have primarily natural ingredients, such as nuts, roots and bark from trees, all native to the region. The production process is very labour-intense and requires a great deal of skill: it takes several weeks to produce each piece.

LOZA

Ceramics

Loza is a new collection of bold, minimalist ceramics designed by Sebastian Herkner. Made using the finest traditional Colombian pottery crafts, this series introduces a new side to the ames accessories collection: the design of the vases is crisp and clean with only a textured detail contrasting the smooth finish.

By opting for a simple, cylindrical shape, the captivating effect of the black ceramic takes centre stage. The Loza series includes two vases and four planters.

MACRANTA

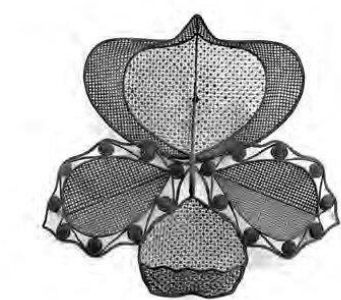

Wall Decoration

ames
exclusive

Macranta is made in Atlántico, a province in the north of Colombia. The artesananas, as the craftswomen are locally known, use century-old weaving, knotting and braiding techniques that transforms the palm fibres into delicate lace-like ornaments.

Both, the craft and the patterns, have been handed down over generations from one artisan to the next. Today, there are more than 65 different patterns in the region. Just the preparation and dyeing of all the fires takes up to five days, while the women work around 25 days on one piece.

Care Instructions

Place the blanket in a laundry bag. It can be machine washed on a cold delicate cycle with similar colour, but we recommend dry cleaning if possible. Only use wool wash detergents. Do not tumble dry and let dry flat. The dimensions can vary minimally as each blanket is made by hand. Do not alter it yourself, as this could damage the knotting

Care Instructions

Wipe clean with a damp cloth (do not use scratchy materials like a steel scourer) and gentle soap. You can also hose them down with water. To protect the colours, avoid exposing the product to direct sunlight over long periods and store indoors during winter. Fitted cover sold separately. If the product is exposed to sea air, wipe the frame regularly with a damp cloth.

MANGA

Tile Table 3

Sebastian Herkner was inspired by the historic hand-painted tiles in Cartagena, Colombia's old houses. This influenced him to create the Manga tables series, featuring asymmetrical graphic patterns. Handmade tiles are incorporated into a metal frame using traditional techniques. The collection includes four tables, each with a different pattern and available in five colors. They add color and texture to living rooms or pool areas.

MECATO

Bench

ames
exclusive

Departamento Nariño is located in SouthWest Colombia, where working with the natural material Iraca has a long tradition. The artesanos weave hats, bags, purses, ornaments and individual one-of-a-kind pieces from the fibres of the palm. The material holds its shape and is very durable. The fibres are dyed, working with seeds, leaves, nuts and roots, while some mineral materials are used to create different colour sections. After the dyeing process, the fibres are drained and need to dry for several days.

This preparation of the material takes around 20 days – only then can the artesanos process the material. With the help of tweezers, needles and tongs, they weave the seats by hand, using different types of stitching. This fabric is then wrapped around the powder-coated steel frame. The production of each bench takes nine days.

Designer	Pauline Deltour

ames
vibrant living

MUYSKA

Rug

Ames has partnered with a small family-owned atelier located in the same Andes region the Muisca lived to produce this collection. There, the craftswomen and craftsmen use only the finest virgin wool that has been spun and dyed in a two to three-week process. They work on horizontal looms specially adjusted for this collection – just this preparation takes about a week. The artisans weave one rug in about eight days, following techniques that date back to the Muiscas, to create the illusion of crossing stripes and blending colours. It takes about 20 days to produce one rug.

Incl. VAT	€ 1069,00	€ -	€ -	€ -

Care Instructions

Some shedding will occur when vacuuming the rug, especially in the beginning. We recommend cutting loose threads with a scissor or pull them in with a crochet needle. Vacuum rug regularly. As the fibres have been dyed by hand, each model’s colour varies slightly. To protect the colours, avoid exposing the product to direct sunlight over long periods and change its position regularly so the colours age evenly. We also recommend using an anti-slip underlay to reduce dust collection. Only use a professional rug cleaning service for the entire rug. The dimensions can vary minimally as each rug is made by hand.

NUDO

Rug – Large

The rug is hand-woven and manufactured in a small family-owned workshop based in the Colombian city of Nobsa. It takes three days to dye and prepare the wool fibres and an additional eight days to weave the rug.

NUNA

Side Table

To manufacture these ceramics, ames works with two family-owned businesses based in Tolima. This province has been a centre for pottery making and ceramic production for more than 300 years. Their workshops employ more than 70 people, many of them are family members, with specialists for each production stage – from clay digging to kiln firing to polishing.

PACIFICO

ames
exclusive

The methods the artesanos and artesanas – as the craftspeople are called in Colombia – use for the Ojitos have their roots in the traditional techniques for making baskets. Our partner ateliers are located in Boyaca, an Andes region, where these crafts have been used for centuries, and there’s particular respect for these skills. Local, multi-generational families work on each piece, using the knowledge passed down to them from their ancestors

PAR Cushion

Earthy colours and subtle colour-blocking characterise the new Par cushions by Sebastian Herkner, following the theme of the Par rugs. The shades of the pattern mirror the earthy, warm tones the designer saw when he visited the Huila region in Colombia. Their cover is knotted with fibres from the leaves of the fique plant, a wild-growing agave-like tree.

Care Instructions

Place the blanket in a laundry bag. It can be machine washed on a cold delicate cycle with similar colour, but we recommend dry cleaning if possible. Only use wool wash detergents. Do not tumble dry and let dry flat. The dimensions can vary minimally as each blanket is made by hand. Do not alter it yourself, as this could damage the knotting

RAIZ Lighting

RAIZ

Pendant Lamp

Small

Raiz combines two crafts with a rich tradition in Colombia: the ancient pottery techniques and the skill of transforming simple palm fibres into intricate decorations. Two different pottery techniques are used to create the shades depending on the finish. For the lights with black ceramic lamp shades, ames collaborates with two family-owned businesses based in Tolima, a province that's been a centre for pottery making and ceramic production for over 300 years. Their workshops employ members of more than 70 families, of which many have become specialists for specific production steps – from clay digging to kiln firing to polishing.

SUBAS Rug – Karo

Each rug is manufactured in family-run workshops located in Suba, a suburb of Colombia's capital Bogotá. The techniques the craftspeople use to process the sheep wool have been handed down from generation to generation over hundreds of years. Alone the preparation of the wool takes three days, while the artesanos and artesanas work 15 days on producing the final rug.

Incl. VAT	€ 1786,00	€ 2139,00	€ 4087,00	€ -

Care Instructions

Some shedding will occur when vacuuming the rug, especially in the beginning. We recommend cutting loose threads with a scissor or pull them in with a crochet needle. Vacuum rug regularly on a low suction setting to prevent lint buildup. To protect the colours, avoid exposing the product to direct sunlight over long periods and change its position regularly so the colours age evenly. We also recommend using an anti-slip underlay to reduce dust collection. Only use a professional rug cleaning service for the entire rug. Each rug is woven by hand, so the dimensions and can vary minimally. Do not alter it yourself, as this could damage the knotting.

Care Instructions

Some shedding will occur when vacuuming the rug, especially in the beginning. We recommend cutting loose threads with a scissor or pull them in with a crochet needle. Vacuum rug regularly on a low suction setting to prevent lint buildup. To protect the colours, avoid exposing the product to direct sunlight over long periods and change its position regularly so the colours age evenly. We also recommend using an anti-slip underlay to reduce dust collection. Only use a professional rug cleaning service for the entire rug. Each rug is woven by hand, so the dimensions and can vary minimally. Do not alter it yourself, as this could damage the knotting.

SUBAS

Rug – Oruga

Each rug is manufactured in family-run workshops located in Suba, a suburb of Colombia’s capital Bogotá. The techniques the craftspeople use to process the sheep wool have been handed down from generation to generation over hundreds of years. Alone the preparation of the wool takes three days, while the artesanos and artesanas work 15 days on producing the final rug.

The Suncho basket is a delightful, handmade storage piece that can also be used as a planter. French designer Pauline Deltour developed the checked pattern after seeing the plastic bags Colombians bring with them when shopping at the food markets in Bogota. The collection also includes vases, storage boxes and pen holders, and is available in three color combinations.

Rug

Each rug is woven by hand in production facilities in the provinces Santander and Boyacá. In both regions exists a long tradition of working with fibres that are made from the leaves of the fique plant. For this rug, our artesanos and artesanos combine these natural fibres with dyed wool threads to create the asymmetrical piece.

The preparation of the raw materials alone takes up to five days and the weaving and braiding of the rug takes between 20 to 30 days, depending on the size of the final rug.

Rug

Each rug is made from natural virgin wool and manufactured in small workshops in the Colombian city of Cajicá, where the local craftsmen and craftswoman still know traditional weaving and knotting techniques. Made entirely by hand, it takes a week to prepare and dye the wool, while the knotting of the actual rug takes depending on the size between two to four weeks – each individual warp and weft is interlaced by an artisan.
