

Medical Devices

About Us

Caring for Life Since 1829

Fannin has a long-standing reputation for excellence in medical supplies and distribution across Ireland and the UK. Since our expansion into the UK over 20 years ago, we have become a trusted supplier to both the NHS and the private healthcare providers.

We provide high-quality, cost-effective medical devices that enhance patient care, improve clinical outcomes, maximising theatre productivity and efficiency. Through our highly skilled team, we deliver high standards of clinical support within an ever-changing and developing healthcare system.

Our Commitment to Sustainability

At Fannin, we know that sustainability and safety are at the forefront of our customers' minds and that it is essential for businesses to take action to reduce their carbon footprint in order to combat climate change. We aim to create a sustainable business by ensuring that we operate responsibly in everything we do for our customers.

Critical Care & Anaesthesia

Airway Management

Airtraq Plus

Airtraq Plus is a video laryngoscope revolutionising choice for managing routine and difficult intubations. It is versatile, fitting Macintosh, Hyper Angulated and Channelled geometries. Blades manufactured from 100% recycled material; screen display enables rotation and positioning for all intubations. Wi-Fi feature casting to tablet, phone or secondary display: simple and effective.

Airtraq SP

The most simple solution for video intubation. Reduces C-spine movement, allows intubation from any position, integrated endotracheal tube channel, anti-fog for clear image. Easy to learn, simple to use and safe for the patient.

SoftTip™ Endotracheal Tubes

SoftTip™ technology can make the entire intubation process faster and safer, and reduce potential damage to the patient's airway. Supplied with AccuCuff® pressure indicators, allowing for continuous visual monitoring of the cuff pressure, eliminating the need for regular spot-checking. Standard, Reinforced, Oral and Nasal available. AccuCuff® pressure indicators also sold separately.

HME Filters & Accessories

Adult, paediatric and neonatal Heat and Moisture Exchanging Filters are validated for >99.99% bacterial and viral removal. Variants with elbow and catheter mounts attached, are available.

Anaesthetic Face Masks

Air cushioned anaesthetic face masks are manufactured in seven sizes.

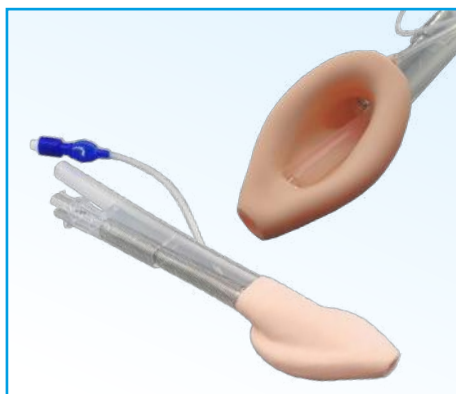

Air-Q®3 Supraglottic Airways

Air-Q®sp3G uses positive pressure ventilation to self-pressurise the cuff. Cuff pressures cycle between peak airway pressure and PEEP levels. Features an extra wide gastric inlet that accommodate NG tubes up to 18Fr and two gastric channels.

Video-Assisted Silicone Laryngeal Masks

The SaCoVLM™ provides real-time imagery for monitored insertion, ensuring accurate placement during intubation. Its intraoperative monitoring allows for constant visualisation, enabling the detection of reflux or cuff movement. Designed to facilitate safe intubation, this video-assisted laryngeal mask enhances both safety and patient comfort during procedure.

Double Lumen Silicone Laryngeal Masks

Double Lumen Silicone Laryngeal Masks are validated for up to 40 uses. Integrated gastric channel and bite block. Manufactured in 7 different sizes.

Integral Silicone Laryngeal Masks – Reusable

Validated for up to 40 uses, these reusable devices have a silicone cuff allowing for atraumatic insertion. Full range of standard and reinforced sizes.

Integral Silicone Laryngeal Masks – Single Use

Single use laryngeal masks made of high-quality, 100% medical-grade silicone, making them easy to insert/remove, extremely soft to touch and creation of reliable seals. Available as standard or reinforced, in all seven sizes.

Critical Care & Anaesthesia

Airway Management

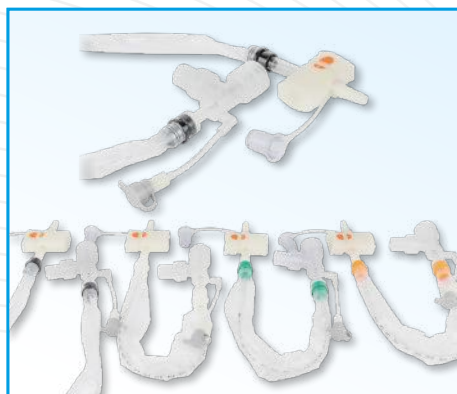

Tracheal Tube Introducers

Range of tracheal tube introducers with excellent memory. Adult, paediatric infant sizes available – straight, curved tip or coiled variants available.

Nasopharyngeal Airways

NasoFlo® allows for direct oxygen delivery, while humidification vents, positioned towards the distal tip, facilitate heat and moisture transfer. It can also be supplied with an optional respiratory indicator, with or without hydrophobic filter.

Closed Suction Catheters

AMSure® Suction Catheters improve patient care by safely removing respiratory secretions from the upper airway. The suction catheters are available in both straight and coiled packs, in various sizes.

Sterile Water & Sodium Chloride Solutions

AMSure® Sterile Water and Sodium Chloride Solutions – for inhalation, irrigation and humidification. All products are DEHP-free, PVC-free, latex-free, preservative-free and non-pyrogenic.

End Tidal CO₂ Cannula

Salter has been the gold standard in ET_{CO}₂ sampling cannula innovation for many years.

Ordering information:

Patient Safety

Peripheral Nerve Stimulators

The SunStim™ Pro Peripheral Nerve Stimulator delivers reliable, adjustable current in one-second twitch pulses. Features built-in train of four with four pulses per two seconds. This deluxe nerve stimulator is ergonomically designed with a digital screen for quick visual assessment of functionality.

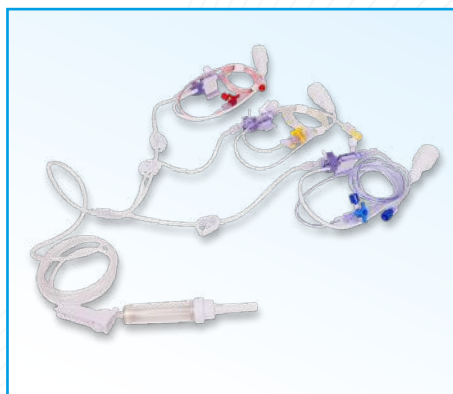

EMG Quantitative Neuromuscular Monitor

TwitchView®2 displays the patient's progression of block and recovery on a trend plot. Graphical representation of patient-specific pharmacodynamics informs the precise dosing of neuromuscular blockade and reversal agents. With TwitchView®2 practitioners can proactively manage neuromuscular blockade and confirm full recovery is achieved.

Pressure Infuser Bags

The pressure infuser bag is a safe, high-quality device for intravenous and intra-arterial infusion treatment, designed for single patient use. Clear front panel and mesh backed. Available in 500mL, 1000mL and 3000mL.

Invasive Pressure Monitoring Sets

Invasive Pressure Monitoring Sets offer safe and accurate monitoring in critical care. Featuring a high-quality transducer, versatile flushing valve, and adjustable flow rates, these single use sets ensure reliable performance. Available in single, dual, and triple sizes.

Ultra-Sensitive Silicone Eye Protectors

Single use, patient eye protector for use during induced anaesthesia. The only eye protector incorporating a gentle silicone adhesive for ease of removal.

Critical Care & Anaesthesia

Vascular Access

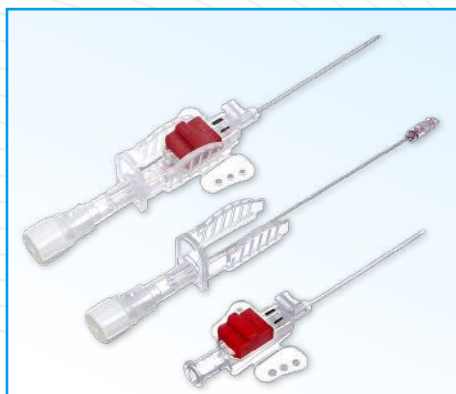

Blood Control IV Safety Cannula

SentraCath Blood Control IV Safety Cannula help in reducing blood leakage and blood exposure, reducing the risk of healthcare professional occupational blood-borne illness.

IV Safety Cannula

Wide choice of SentraCath IV Safety Cannula designs, all with an extensive size range (14-26G). Thin-walled needle design with robust safety clip. Flashback needle enables venepuncture confirmation. Minimal withdrawal resistance and activation force required, reducing the risk of catheter dislodgement.

Arterial Safety Cannula

Suitable for arterial pressure monitoring and serial arterial blood gas determinations. It features an innovative on/off switch to prevent backflow, safeguarding healthcare professionals from blood exposure and ensuring patient safety against air embolism and contamination. Needle safety guard automatically covers the sharp bevel after needle withdrawal, reducing the risk of needle-stick injuries.

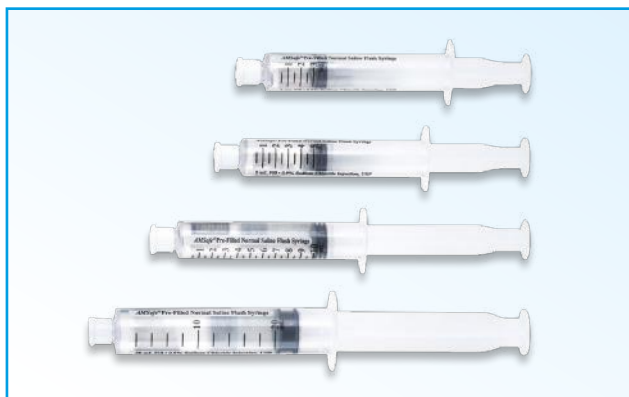

Closed System IV Safety Cannula

SentraCath Closed System IV Safety Cannulas are designed to minimise catheter-related bloodstream infections and blood borne pathogen exposure. Ultra-soft, large perforated wings for better catheter stabilisation and skin ventilation. User friendly, self-activating passive safety mechanism prevents needle stick injuries.

Tourniquets

CBC VECOS® Tourniquet is a single-use device with defined compression force, eliminating the need for cleaning or disinfection. It is easy to handle in various environments, and its soft fleece material is gentle on the skin, preventing bruising while accommodating different arm sizes.

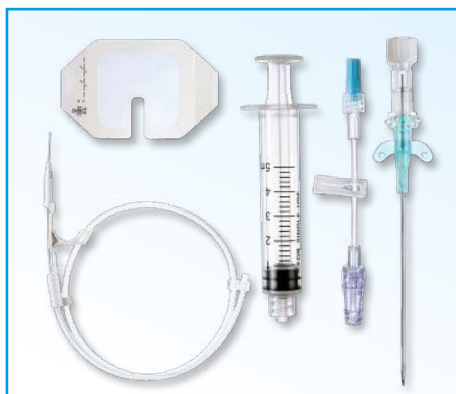

Pre-Filled Saline Syringes

AMSafe® pre-filled saline syringes are available in 3mL, 5mL, 10mL and 20mL sizes.

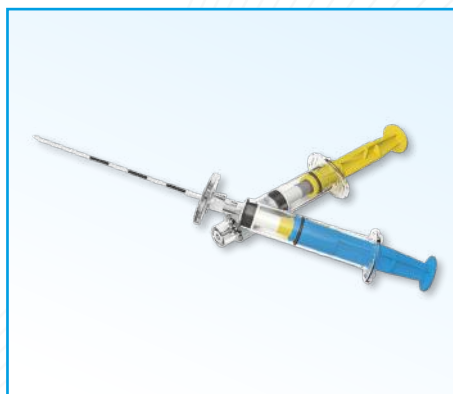

Accuro®

Accuro® Epidural Guidance delivers automated, real-time image guidance with significantly enhanced bone-to-tissue contrast to ensure improved localisation of the desired intervertebral space for first-attempt success during spinal needle guidance procedures.

Over-the-Needle Catheters

Over-the-needle kits are suitable for difficult insertion vascular access. The kit includes a soft, flexible, kink-resistant straight nitinol guide-wire, biocompatible radio-opaque polyurethane catheter, and needle-free connector.

EpiFaith® Smart Syringe

The EpiFaith® smart syringe is a compact and robust device, that assists clinicians in locating the epidural space. Intuitively equipped with the Smart Signal visual indicator, upon reaching the epidural space, it is beneficial to both junior and senior clinicians, by transforming the process into a safe and convenient procedure.

EpiFaith® Smart CV

EpiFaith® smart CV is a visualised pressure indicating syringe, which can provide real-time warning of artery puncture during central venous catheterisation.

Critical Care & Anaesthesia

Infusion Solutions

Easyflow® Soft Shell Elastomeric Infusion System

Easyflow® is the only fully soft elastomeric infusion system for drug administration. It is used for the continuous infusion via intravenous, intra-arterial, epidural or subcutaneous routes according to the specific clinical protocol.

Easyflow®-R Hard Shell Elastomeric Infusion System

Easyflow®-R elastomeric infusion pump is a discreet disposable, the lightest in the world, comfortable and accurate.

Infumix

Infumix is a semi-automatic electronic device designed for the safe and precise withdrawal and preparation of drugs. It ensures the safety of both patients and operators during drug preparation and administration.

Needle-Free Vials

Needle-free vials reduce accidental needlestick injuries during medication preparation. Protect against hazardous drug exposure, ensuring a safer environment for healthcare professionals and patients. Made with Copolyester Tritan™ for compatibility with a variety of injectables, ensuring chemical stability. 13mm and 20mm sizes.

Disinfecting Caps

The SwabArt® Disinfecting Cap is specifically designed to reduce the risk of microbial contamination and improve patient outcomes. SwabArt® Disinfecting Caps for needle free valves are single use disinfecting products that protect patients from catheter related blood stream infections. Each SwabArt® Disinfecting Cap is impregnated with a highly liquid absorbent sponge, saturated with 70% Isopropyl Alcohol (IPA).

Neutral Displacement Needle-Free Valves

The NeutrArt® range are single-use, disposable connectors intended for use with vascular access devices, for administration of fluids during IV therapy. Designed with a transparent housing for flush visualisation and a flat swabable valve surface to enhance infection prevention.

Negative Displacement Needle-Free Valves

The FlowArt® range are needle-free valves with a fully transparent clear housing and integrated silicone seal and internal fluid pathway that prevents needle-stick injuries. With >600mL/min flow rates, range is suitable for high pressure/high flow assisted infusion treatments, such as dialysis therapy and CT infusion (power-injectable). Available in single, double, triple and quadruple variants. Arterial option too.

IV & Blood Gravity Sets

Double chamber (4mm ID tubing) and IV Gravity Sets, available with 3-way connector and extension tubing. Autofusion Enhance IV Sets with air vents and rotating luer connector - includes a hydrophilic membrane to prevent air entrainment if IV bag empties.

Extension Sets & IV Accessories

IV extension sets and accessories available in different lengths, with or without side clamps. Low and high pressure tubing options in various lumen sizes; coiled or straight.

Total Intravenous Anaesthesia Sets

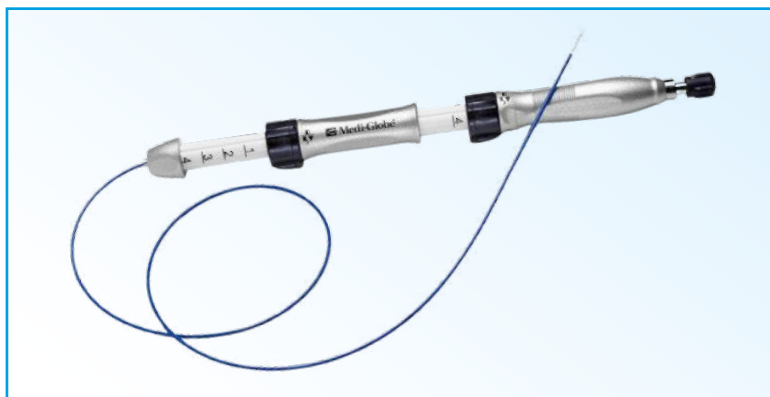

2-way, 3-way and 4-way Tivatek™ TIVA sets as complete kits – there is no need to attach additional one-way valves or multi-lumen/Y-connectors.

Gastroenterology

Endoscopic Ultrasound Guided Fine Needle Systems

Explore advanced EBUS and EUS needles for precise diagnostic procedures including EBUS TBNA, EBUS TBNB, EUS FNB, and EUS FNA.

Biopsy

Our biopsy forceps are available in multiple designs and specifications. For precise and safe removal of tissue samples as a part of an endoscopic examination of the human digestive tract, as well as in bronchoscopy or for anticoagulation (HOT forceps).

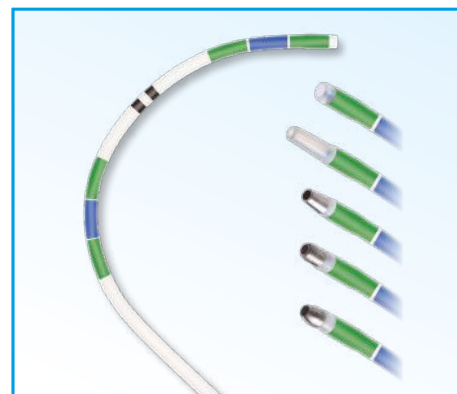

Foreign Body & Polyp Retrieval

We provide a range of innovative solutions, from classic foreign body retrievers to user-friendly designs, including disposable polyp traps for clean, hygienic removal – eliminating the need for reprocessing and reducing costs.

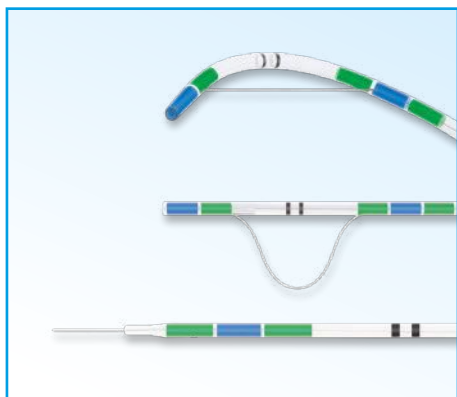

Polypectomy

In polypectomy, polyps are removed from the gastrointestinal tract as part of an endoscopic examination, for further histological examination. We offer a comprehensive portfolio of polypectomy snares as well as special designs to support these procedures.

ERCP Catheter

With the aid of X-ray contrast media, an ERCP enables the investigation and medication of biliary and pancreatic ducts – without need for open surgery.

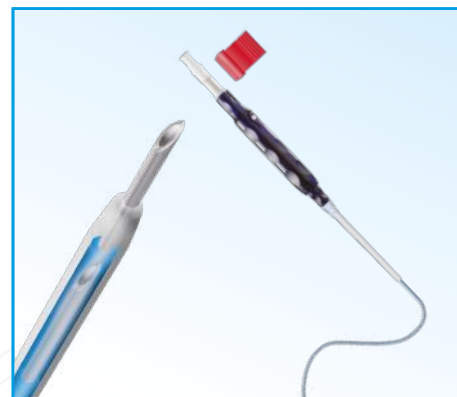

Sphincterotomy

Endoscopic sphincterotomy opens the papilla and sphincter to access the biliary and pancreatic ducts, mainly for treating choledocholithiasis and duct stenoses during ERCP.

Stone Extraction

To support stone extraction, which is the endoscopic removal of gallstones and concretions, we offer a comprehensive portfolio of stone extraction balloons, baskets and mechanical lithotriptors.

Hemostasis

We offer various approaches to local hemostasis and the binding of growths within the framework of gastroenterological examinations and procedures: from fibrin and injection needles to clip systems and multiband ligators.

Drainage

We offer numerous solutions for the therapeutic drainage of body fluids or gases, as well as the improvement of the passage: biliary and pseudocyst stent sets, nasobiliary drainage and pancreas stents.

Guidewires

Our guide wires are used to introduce, stabilise and position instruments for flexible endoscopy. They are mostly made of Nitinol, are coated, have straight or curved tips and are highly flexible to adapt to different anatomical structures.

Dilation

For dilation of anatomy and strictures within the entire digestive tract, we offer balloons that can be used in gastroscopy, enteroscopy or colonoscopy in a variety of specifications.

Primus® Single-Use Flexible Ureteroscope & Cytoscope

For precision and ease, our Primus® Single-Use Flexible Ureteroscope is a cutting-edge solution for endoscopy. Paired with the innovative Primus® Monitor, which functions as both a display unit and a processor box, this system is as versatile as it is effective.

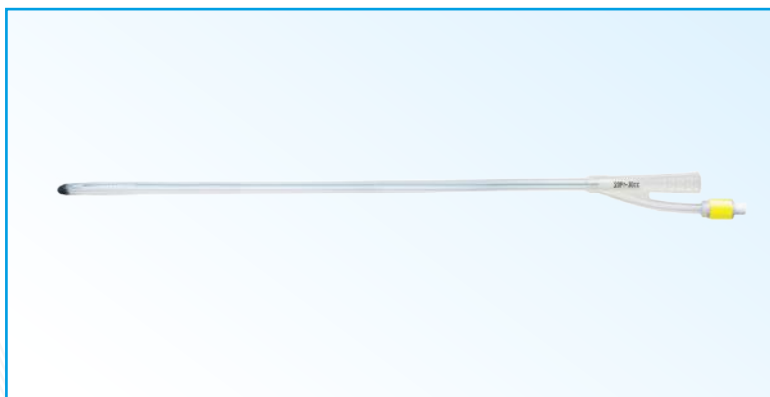

Ureteral Stents

Explore our advanced selection of ureteral stents, featuring the innovative Magnetic Black Star. This groundbreaking design allows for effortless stent removal without the need for a cystoscope, offering enhanced convenience and efficiency.

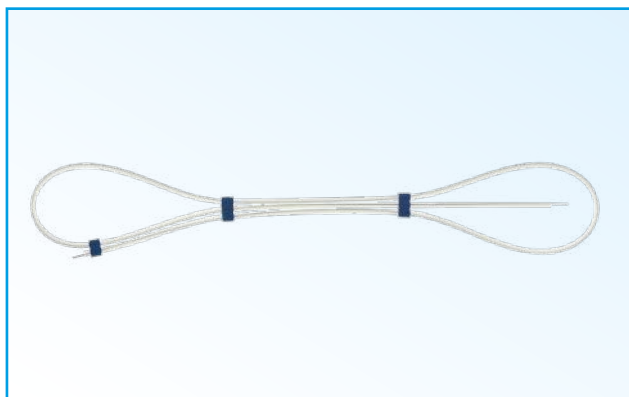

Biopsy Products Forceps & Prostate Gun

Explore our comprehensive biopsy product range, featuring precision forceps and advanced prostate biopsy solutions, designed for both transrectal and transperineal procedures to ensure optimal results.

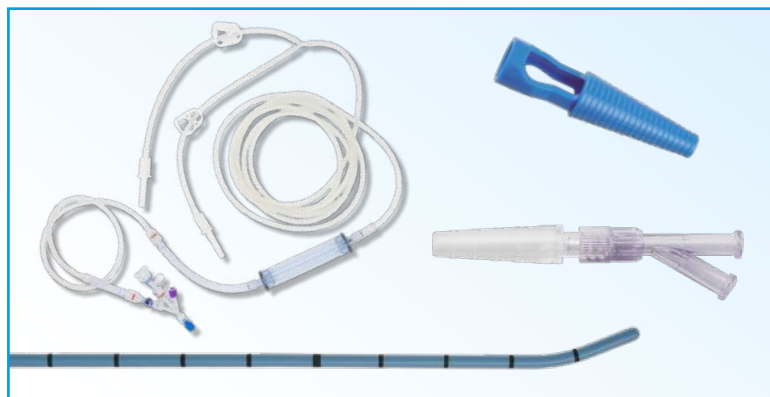

Urinary Drainage

Discover our complete catheter collection, including both suprapubic and transurethral options, designed for effective and reliable urinary management solutions.

Guidewires

Our range of guidewires are available in a variety of specifications, expertly designed to meet the complex demands of urology procedures with precision and reliability.

Accessories

We offer a wide selection of accessories to enhance your urology portfolio, including ureteral catheters in various sizes and specialized Botox needles, all designed to support precision and improve patient outcomes.

Stone Baskets

We offer a comprehensive selection of high-quality nitinol, tipless baskets for efficient stone removal, available in both 3-wire and 4-wire designs to ensure precise and reliable performance in every procedure.

Electrodes

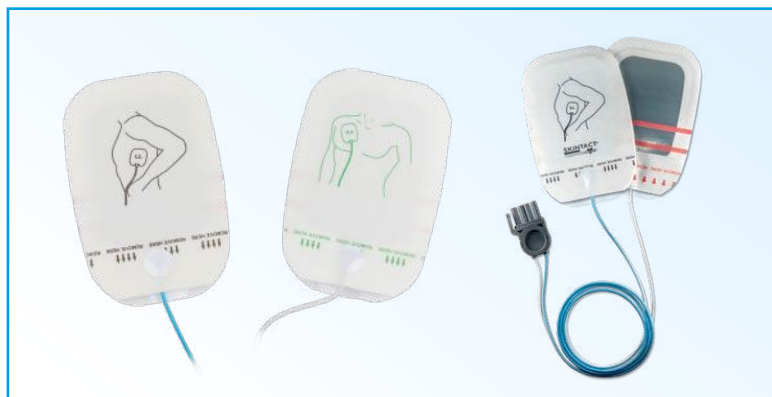

Our market leading brand Skintact® offers an extensive range of electrosurgical and defibrillation electrodes for diagnosis and monitoring. All our Skintact® products are tested according to applicable standards, ensuring maximum safety and reliable performance.

SKINTACT® Easibeat Paediatric Defibrillation Electrodes

Designed for the use of external defibrillation, non-invasive pacing, synchronised cardioversion and monitoring on paediatric patients of or less than 25 kg (55 lbs).

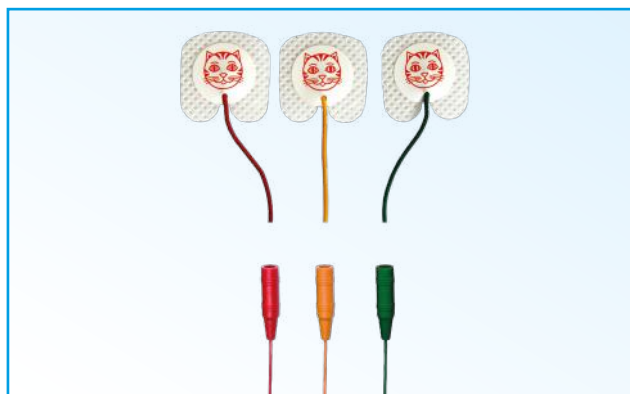

SKINTACT® Easibeat Multifunction Defibrillation Electrodes

SKINTACT® Easibeat multifunction defibrillation electrodes are designed for the use of external defibrillation, non-invasive pacing, synchronised cardioversion and monitoring.

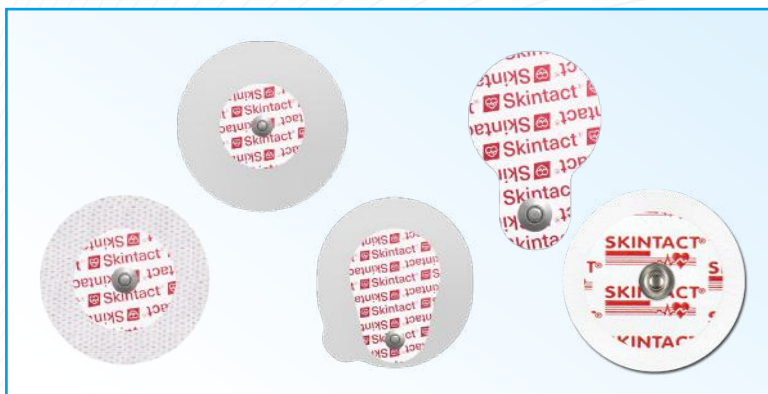

Diagnostic Resting ECG Electrodes

SKINTACT® Easitabs are designed for Resting 12 lead diagnostic ECGs. Easitabs are disposable, eliminating the spread of cross-infection. As the name suggests, Easitabs are easy to use, provide high-quality recordings, and are suitable for all types of patients.

Paediatric & Neonatal ECG Electrodes

Paediatric and neonatal electrodes, available with soft flexible lead wires, with a choice of Radio-Translucent Leads and Connectors.

Monitoring ECG Electrodes

SKINTACT® Premier range has an electrode to meet all of your particular needs, both in short- or long-term monitoring.

Electrosurgery

Our market leading brand, SKINTACT®, offers an extensive range of electrosurgical consumables to meet all of the surgical needs of healthcare professionals in the hospital and emergency services sectors.

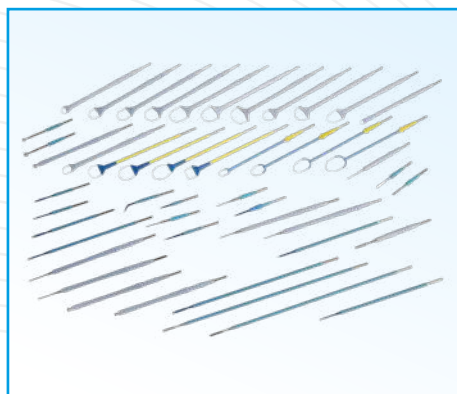

Diathermy Electrosurgical Pencils

Skintact® single use sterile disposable ESU pencils eliminate the risk of cross-contamination, are more cost effective than cleaning and now come complete with Tip Cleaner and other accessories.

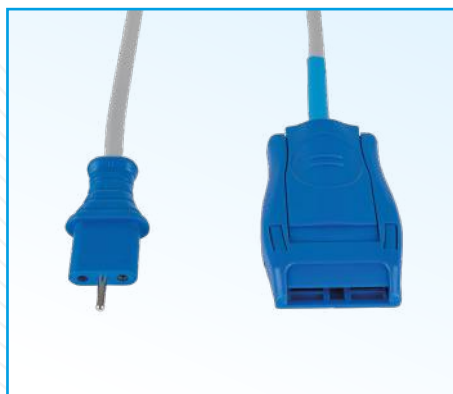

Diathermy Electrosurgical Plates

SKINTACT® ESU Cool Contact Neutral Electrodes distribute the high-frequency current more efficiently, which means that the electrodes heat up less and facilitates more effective electrosurgical contact. Integrated, non-sticky peel-off aid enables easy removal without stressing the skin. Available for adults and children, split and unsplit, with or without a fixed cable.

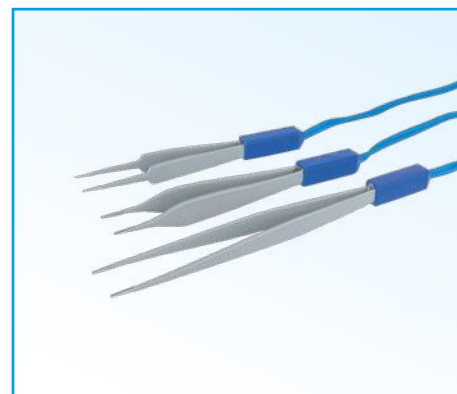

Diathermy Active Electrodes

Skintact® ESU Cool Contact Neutral Electrodes distribute the high-frequency current more efficiently, which means that the electrodes heat up less and facilitates more effective electrosurgical contact. Integrated, non-sticky peel-off aid enables easy removal without stressing the skin. Available for adults and children, split and unsplit, with or without a fixed cable.

Diathermy Cables

Fannin UK offer a wide range of cables compatible with all models and brands of diathermy machines. Lengths vary from 3 - 5 meters.

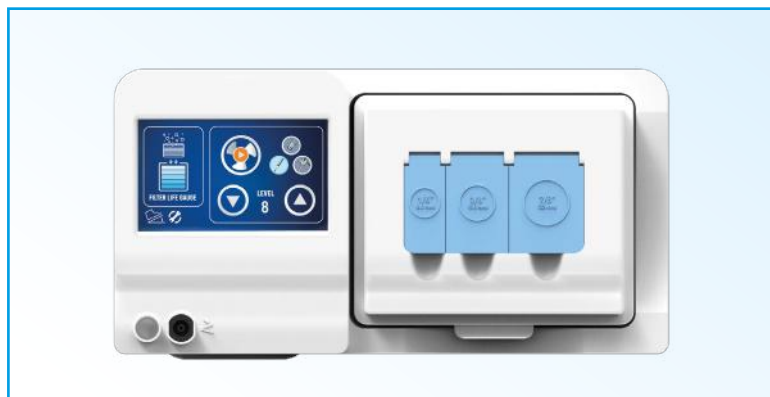

Diathermy Forceps

Fannin UK offer a comprehensive range of monopolar and bipolar single use diathermy forceps in various lengths, Styles, tips sizes for use in electrosurgery. All provided with 3m integrated cables.

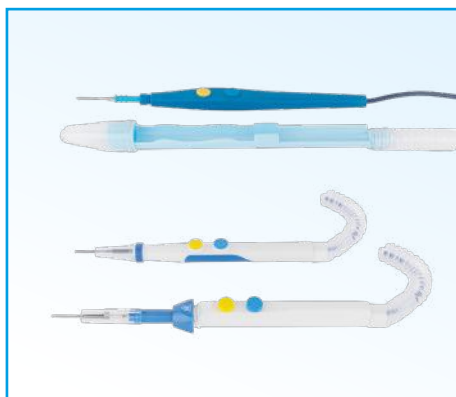

Electrosurgery

Protect your healthcare workers from surgical smoke inhalation; capture it at the source with the Care E-Vac Smoke Evacuation system. Our collection includes a surgical smoke evacuator, associated smoke evacuation pencils and a full range of tubing and accessories to meet your needs.

Surgical Smoke Evacuation Systems

Protect your healthcare workers from surgical smoke inhalation. Capture it at source with the Care E-Vac Smoke Evacuation System. Unit offers 3 procedure modes covering all specialties. Accessories include Tubing, Fluid Traps, filters, automatic activation device and 3 year warranty period.

Surgical Smoke Evacuation Pencil

The Care E-Vac smoke evacuation pencils offer a wide range of features and benefits, including telescopic capabilities, non-stick blade electrodes and isolated quiver. The sleek light weight design ensures comfort during use for the surgeons, as well as superior suction capability.

Surgical Smoke Evacuation Accessories

Accessories include fluid traps, filters, footswitch and automatic activation device.

Surgical Smoke Evacuation Tubing

The Care E-Vac Surgical smoke evacuation range of tubing covers various specialties and come complete with 3m (10ft) extraction tubing.

Surgery

Suction Therapy

Founded in 1997, VacSax is the UK's leading supplier and manufacturer of disposable suction systems. Based in Plymouth, VacSax has the largest and most comprehensive product range available in the disposable suction market, with options catering to all needs.

Suction Liners, Cannisters & Accessories

The only Suction System, where all external surfaces of the canister and liner contain antimicrobial properties, proven to reduce the growth of harmful bacteria. These include MRSA, VRE, CPE and E. coli, which will reduce by 99.99% over a few hours and permanent protection after 24 hours.

iReceptal Surgical Suction System

Offers a reliable solution for surgical waste management with a 20L capacity and a one-way filter allowing multiple suction points. Its specimen trap prevents backflow, while automatic coupling and self-cleaning streamline waste disposal when docked. The system's closed design and mobility ensure safe, easy transport and efficient performance in clinical environments.

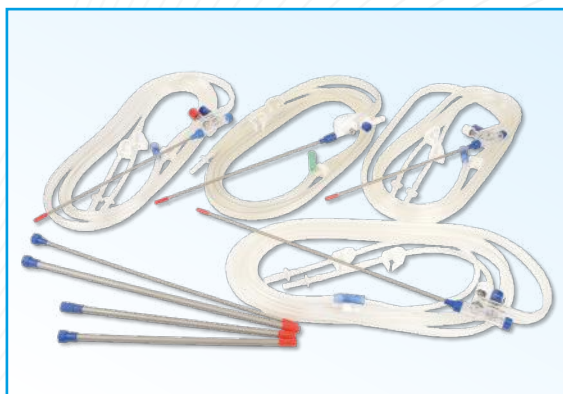

Tissue Collection Device

The VacSax Universal Large Capacity Tissue Collection Device offers 350ml capacity and fits securely to all suction systems. It is easy to remove without risk of spillage and features a click-top lid to safely contain tissue samples. A secure outer box allows for discreet transport.

Inline Smoke Filters

VacSax Inline Smoke Filters are designed to protect users against the harmful effects of Bacteria, Virus, Smoke Fumes, Volatile Organic Components and the unpleasant effects of odour present in the suction airstream.

Suction Irrigation Sets & Probes

Efficient, ergonomic and economic, our sterile single use suction irrigation sets are designed to enable efficient and easy aspiration and/or irrigation during laparoscopic procedures.

Ordering

Minimally Invasive Surgery

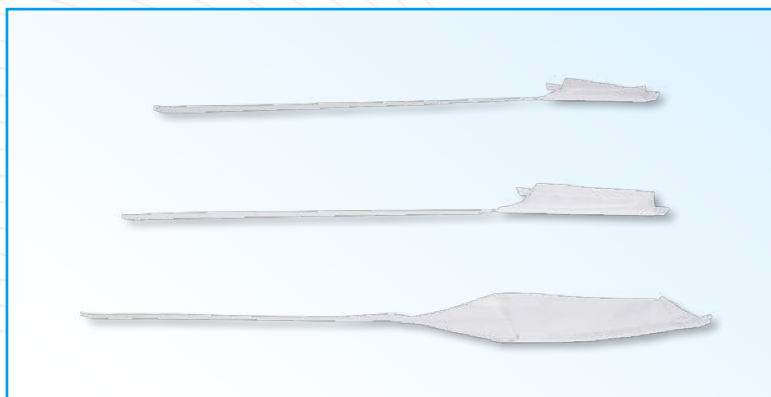

Manufactured in Bristol, the Espiner range of Tissue Retrieval Sacs provides ease of deployment, positioning and retrieval, suitable for all tissue retrieval procedures.

The award-winning Espiner range of tissue retrieval bags provides ease of deployment, positioning and removal. Utilising the same rip-stop nylon material used in hot air balloons, the Espiner range continues to be developed with safety and reliability in mind.

Eco-Sac

Comprehensive solution covering laparoscopic procedures from node biopsy to enlarged spleens, with large mouth opening for comprehensive tissue capture. Unique design eliminated need for a plastic introducer and applicator, which reduces shelf space requirements, eliminates plastic waste, and dramatically reduces costs. Easy orientation using coloured tab, with safe closure using strong monofilament drawstring. Simplified deployment via the mouth or base.

E-Sac

Suitable for all laparoscopic procedures from node biopsy to bowel resection. Includes X-ray opaque marker for ease of use. Stabilise using the elongated tail during deployment and safely close the Sac during extraction. Easily deploy using 5mm instrument. Instrument free extraction possible with no claw forceps needed to complete the procedure.

Master E-Sac

Covering all laparoscopic procedures, including large spleen, ovary and kidney. Including X-ray opaque marker. Introducer system and arms permit external manipulation of the Sac for tissue capture. Ergonomic and non-slip introducer system can be withdrawn from patient, leaving tissue securely contained until retrieval.

Ordering information:

Click [here](#) or scan the QR code.

ExBag

Disposable laparoscopic retrieval bag. Easy deployment with intuitive application system, with trocar available to introduce other instruments after bag deployment. Nitinol drawstring supports automatic bag deployment for easy specimen placement. Suture can be attached to the loop at the end of the nitinol drawstring for external control over the bag. Reduced environmental footprint, with less polymer compared to conventional retriever bags on an introducer.

Morcellation Sac

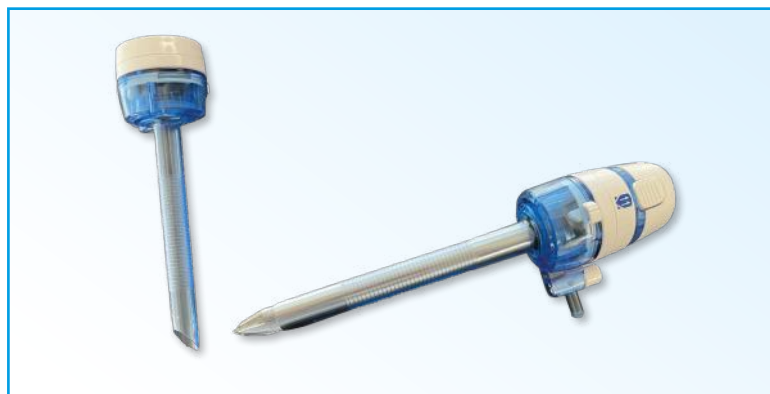

By creating a chamber for tissue isolation during morcellation, the Espiner Morcellation Sac has the potential to reduce disseminated malignancy rates. The innovative design prevents bowel injury and reduces procedure time, with tissue and blood residue contained and removed upon extraction of the sac. The Morcellation Sac allows for the benefits of laparoscopic surgery but with greater safety when working with morcellated tissue.

Surgery

Minimally Invasive Surgery

The Espiner portfolio has expanded to include a wide range of high quality single use, surgical instruments and accessories. These products are complimentary to the Espiner range.

Trocars

The Espiner disposable Trocar range is designed for precision and control, providing safe and straight forward access to the peritoneal cavity. The thread design of the port maintains the seal and helps ensure a leak free operation.

Laparoscopic Instruments

Fannin provides a comprehensive range of laparoscopic instruments to support healthcare professionals. Our extensive range has been developed following consultation with healthcare professionals, ensuring we provide quality products at a cost-effective price, helping to maximize theatre productivity and efficiency.

Laposcopic Quivers

Laparoscopic Instrument Quiver for use in laparoscopic surgery. Durable, lightweight, strong with attachment loops ensures laparoscopic instruments are securely held.

Suture Passer

The Espiner SuitORpass facilitates the complete and secure closure of operative incisions of 10mm or larger, as well as multiple clinical applications, subsequently reducing the risk of developing a hernia postoperatively.

Scope Warmers

A simple, pre-surgical liquid Scope Warmer which greatly reduces fogging during procedures. The self-contained liquid pack provides rapid warming without the waste of time and cost associated with alternative anti-fogging solutions.

Anti-Fog

The fog prevention kit includes an easy squeeze bottle to deliver the exact amount of solution to the scope. The sterile kit also includes a convenient adhesive backed sponge with X-Ray detectable strip.

Veress Needles

Fannin's single use pneumoperitoneum insufflation needles provide a reliable, safe, cost effective means of gas insufflation in laparoscopic surgery.

Insufflation Tubing

Simple and easy way to keep your patient and valuable equipment safe. Feel confident that the gas you are delivering to your patient's abdomen is free from debris and contaminants.

the QR code.

Imaging & Probe Covers

Ultrasound Gel

Specifically developed for diagnostic and medical ultrasound therapy, our gel range is odourless, hypoallergenic and water soluble. Available in Blue or Clear variants and 5L, 250ml, or 20ml sterile sachets.

C-Arm Covers & Camera Drapes

Camera Drapes and C-Arm Covers create a sterile environment which reduces the risk of contamination. They are easy to apply thanks to the special clip system, and are designed to allow free movement of the C-Arm position when in use.

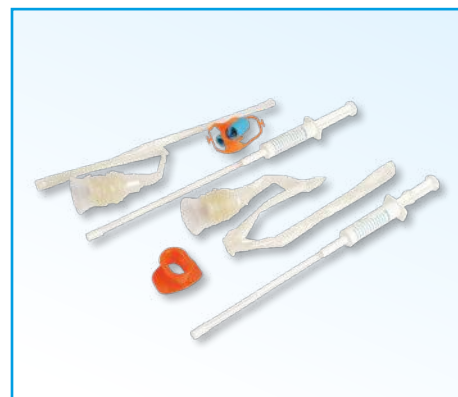

Ultrasound Probe Covers

Fannin ultrasound probe cover offers an easy, cost-effective solution to maintaining a sterile field during vascular access procedures with the added convenience of a sterile sachet of ultrasonic gel. Available in various lengths.

Light Handle Covers

Sterile, single use light handle covers available in a wide range of sizes. Save time by reducing the need to re-sterilise the light handle after use.

TOE Covers

Sterile, single use TOE transducer covers are made of soft, high quality and durable polyurethane. The kit contains a unique applicator for quick and efficient insertion and a patient bite guard.

Ordering information:

Click [here](#) or scan the QR code.

Disposal Solutions & Patient Preparation

Sponge Counter Bags

Surgical Sponge Counter Bags used to support operating theatre efficiency and safety as well as provide easy tracking of lap sponges, Fannin's Sponge Counter Bag is an effective tool for cleaning up sponges after surgery.

Surgical Skin Markers

Single use, sterile surgical Skin Markers are individually packed. The range incorporates nontoxic ink and a variety of tips.

Sharps Management

A range of sterile sharps pads, disposable sharps containers and magnetic instrument drapes.

Absorbent Theatre Mats

Superabsorbent and Non-Slip Absorbent Theatre Mats allows the mat to absorb, store and bind fluid, available in various sizes.

Hair Removal Devices

The Sticky Mitt glove facilitates the removal of hair and lint from the patient's skin when pre-operative hair removal is necessary. This reduces the risk of surgical site contamination and post-procedural infections.

Ordering information:

Click [here](#) or scan the QR code.

General Theatre

Miscellaneous

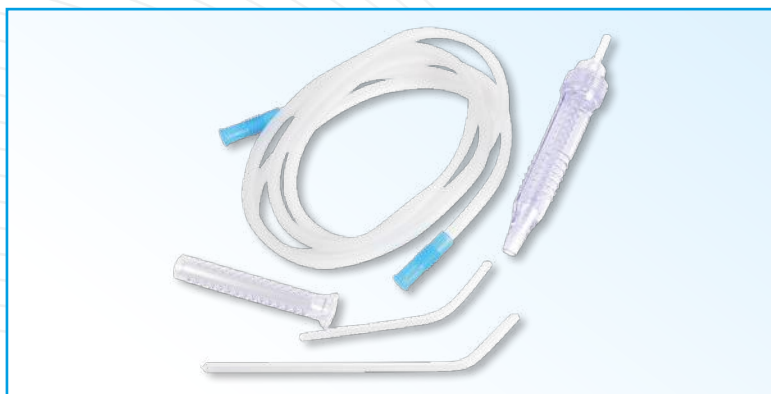

Haemorrhoid Ligation System

Disposable multi-band ligation system for the treatment of haemorrhoids. Designed to be clinically efficient, easy-to-use and cost efficient.

HB-SleeveLUX Proctoscope

A single-use, self-illuminating tool designed for quick diagnosis and treatment of anal canal and lower rectum conditions. It features a high-intensity LED light, a flexible Comfort Sleeve, and a larger-diameter tube for procedures like hemorrhoid banding. With patented Locking Technology, it ensures secure use, is cost-effective, and comes ready to use, providing an efficient solution for proctology care.

Orthopaedic Suction Kits

Our Orthopaedic Suction Set helps evacuate fluid and debris during procedures with a large amount of debris. Suitable for removal of large bone fragments during orthopaedic surgery.

Irrigation Sets

Single and Double Irrigation Sets readily available for Urology, as well as Arthroscopy Irrigation Sets with trauma pump. Optimal tubing dimensions utilised to achieve clinically suitable flow rates.

Bulb Irrigation Syringes

The AMSure® Bulb Syringe is designed with a soft pliable bulb that supports one handed administration.

Pulse Lavage Systems

The application of Pulsed Lavage has been clinically proven to be essential for both orthopaedic procedures and wound debridement. In arthroplasty, bone bed cleaning with a Pulsed Lavage is a key aspect to the longterm survival of the prosthesis.

Personal Protective Equipment

Protective Eyewear

Personal protective eyewear in convenient compact packs, readily available at point-of-use for quick response.

Sterile Gowns

Sterile, surgical gowns suitable for use in Operating Theatres, Medical Clinics, Hospital Wards and Laboratory environments.

Anti-Slip Patient Socks

SFTSox double sided anti-slip socks are designed to reduce the risk of patient falls in healthcare environments.

Emesis Bag

The Vommax emesis bag is an ideal replacement for the traditional disposable bowl and kidney dish. Ergonomically designed with a rigid plastic mouthpiece fitting perfectly over the patient's mouth, ensuring that all vomit is completely captured. Vommax has a simple twist and seal device for immediate hygienic odourless disposal.
