Editor's Letter

The coronavirus cases are spreading all over the world and this has caused panic among investors. If the virus is not contained quickly, it is likely to be a huge drag on global growth. Therefore, equity markets and the energy markets plunged last week. The safe haven assets of gold and Bitcoin were also sold aggressively to cover the losses in the equity markets.

OUR BLOG ARTICLE FOR THIS SPECIAL ISSUE IS ABOUT TPX NETWORK WHICH WAS SET UP TO SOLVE SEVERAL PROBLEMS IN THIS NEW ERA OF TECHNOLOGY.

Bitcoin broke below the descending channel on Feb. 26 and the 200-day SMA on Feb. 28. However, the bears could not capitalize on this breakdown and drag prices lower. This shows a lack of sellers at lower levels. The bulls have again pushed the price back above the 200-day SMA, which is a positive sign. We anticipate the bulls to face stiff resistance at the 20-day EMA, which is sloping down.

Lastly please check out the advancement's happening in the crypto currency world and project World markets take advantage of AI in trading as it acknowledges that AI will never be on the same level as human trading. It uses advanced AI trading tools to make sure that trading is highly profitable

Enjoy the issue!

WEEKLY CRYPTOCURRENCY MARKET ANALYSIS

Hello, crypto traders welcome to this week's 120th edition of Cryptonaire Weekly. The overall Cryptocurrency Market Cap stands at \$252 Billion. We have seen a \$23 Billion decrease in the Market Cap since last week. Bitcoin price is currently around \$8775 from \$9540 last week and has decreased by 8.02% and Ether price is now at \$228 from \$256 last week and has decreased by 10.94%. The current market cap for bitcoin is \$161 Billion, and for Altcoins, the current market cap is \$91 Billion.

The coronavirus cases are spreading all over the world and this has caused panic among investors. If the virus is not contained quickly, it is likely to be a huge drag on global growth. Therefore, equity markets and the energy markets plunged last week. The safe haven assets of gold and Bitcoin were also sold aggressively to cover the losses in the equity markets.

During the week, the SEC once again rejected a Bitcoin ETF proposal launched by New York-based asset management firm Wilshire Phoenix. The commission felt that their concerns regarding possible market manipulation in Bitcoin and protecting investors interests have not been suitably addressed.

While these news and events are a hurdle in the short-term, the markets will focus on the halving due in May of this year to boost prices. PlanB, the creator of the closely followed stock-to-flow Bitcoin price forecasting model, said that Bitcoin's price action is tracking the model. According to the model, Bitcoin is likely to stay at an average price of about \$8,650 till its halving, post which the price will pick up momentum.

However, Bitcoin options data suggests a low probability of 11% for the price to rise above \$13,880 by the end of June. For the end of September, the possibility of a move above \$14,000 rises to 16%, which is still low. This shows that at current levels, investor sentiment is not very positive for a large move after halving.

Percentage of Total Market Capitalization (Dominance)

Bitcoin	63.82%
Ethereum	9.97%
XRP	4.10%
Bitcoin Cash	2.40%

CRYPTO TRADE OPPORTUNITIES

BITCOIN - BTC/USD

Bitcoin broke below the descending channel on Feb. 26 and the 200-day SMA on Feb. 28. However, the bears could not capitalize on this breakdown and drag prices lower. This shows a lack of sellers at lower levels.

The bulls have again pushed the price back above the 200-day SMA, which is a positive sign. We anticipate the bulls to face stiff resistance at the 20-day EMA, which is sloping down.

If the price turns down from the 20-day EMA, the bears will make another attempt to sink Bitcoin below the recent low at \$8,400. If this level cracks, the next stop is likely to be \$7,870.10.

Conversely, if the price can rise above the 20-day EMA, it can move up to the resistance line of the descending channel. On a break above the channel, the up move can reach \$10,540.19. The traders can wait for the price to sustain above the 20-day EMA before turning positive.

ETHEREUM - ETH/USD

Ether plunged below the symmetrical triangle on February 25. This breakdown has a target objective of \$196.37. However, the bulls are attempting to form a bottom at \$209.26. The relief rally is currently facing resistance at the 20-day EMA, which is just below the horizontal resistance at \$239.45.

If the price turns down from \$239.45, the bears will attempt to drag it to \$200. The 20-day EMA is flattening out and the RSI is also close to the midpoint. This suggests a range-bound action for the next few days.

However, if the bulls can drive the price above \$239.45, a move to \$278.13 is possible. Above this level, a retest of \$285.95 will be on the cards. The traders can turn positive after the price sustains above \$239.45.

World Markets offers a world of investment opportunities for wise investors.

RIPPLE - XRP/USD

XRP plummeted below the 200-day SMA on February 26, which is a negative sign. Though the bulls are attempting to arrest the decline close to \$0.22, they have not been able to achieve a meaningful rebound. This shows a lack of demand at higher levels.

If the bulls fail to carry the price above the 200-day EMA within the next few days, the bears will make another attempt to resume the down move. A break below \$0.22 can sink the price to \$0.20 and below it to the recent low at \$0.176.

The 20-day EMA is sloping down and the RSI is in the negative territory, which suggests that bears are in command.

However, if the demand can drive prices above the 200-day SMA, a move to \$0.28578 is likely. Above this level, the up move can reach \$0.31533. As XRP has been one of the weakest major cryptocurrencies, we suggest traders wait for the price to sustain above the 200-day SMA for three days before turning positive.

Cryptocurrency Trading Platform

BITCOIN CASH - BCH/USD

Bitcoin Cash broke below the support of \$361.67 on February 25 and dipped close to the next support at \$269.69. As expected, the bulls are defending this support. The relief rally is likely to reach \$361.67, which will now act as a stiff resistance.

The 20-day EMA is sloping down and the RSI is in the negative zone, which suggests that bears are in command. If the price turns down from \$361.67, the bears will try to sink it below \$269.69. If successful, it will complete a head and shoulders pattern, which will be a huge negative.

Conversely, if the altcoin rises above \$361.67, a move to \$400 and above it to \$500 is possible. We suggest traders turn positive on a close (UTC time) above \$361.67.

BITCOIN SV - BSV/USD

Bitcoin SV broke below the critical support of \$236 on February 26 but the bears could not capitalize on the breakdown and sink the price to the next support at \$173.66. This shows a lack of sellers at lower levels.

The bulls defended the psychological support at \$200 and launched a relief rally, which is currently facing resistance at the 20-day EMA. If the bulls can keep the price above \$236, we expect the altcoin to move up to \$301.43 and above it to \$337.80.

However, if the price turns down from the current levels and drops below \$236, a retest of the recent low at \$204.310 is possible. If this support cracks, the downtrend can extend to \$173.66 and below it to the 200-day SMA at \$156.696. The short-term traders can turn positive on a close (UTC time) above the 20-day EMA.

ADVANCEMENTS IN THE CRYPTOCURRENCY WORLD

South Korean Crypto Platform Expands Borderless Payments Powered by Ripple to 12 Corridors

Coinone Transfer, the subsidiary of the South Korean crypto exchange platform Coinone, says it's reaping the benefits of its partnership with Ripple. The retail remittance service has expanded borderless payments powered by Ripple to 12 corridors.

In a customer video, Camille Jeong, business development manager of Coinone Transfer, says the company's alliance with Ripple has helped its service grow from two corridors to 12 corridors in just over a year.

"Our first corridors were the Philippines and Thailand. Right now, we have over 12 corridors. We are seeing big growth at this moment and within a year of launch, we are having an average monthly growth rate of over 50%..."

"When we work with our partners on RippleNet, we can easily integrate with the solution and also the operational cost is lower because we share standard processes. We can use the unified format for requesting remittances so we can easily connect with our other partners."

Binance Partners with Turkey's Biggest Bank for Instant Lira (TRY) Deposits & Withdrawals

The world's leading cryptocurrency exchange Binance has integrated its first bank avenue with Turkey's Akbank, announced the exchange on Monday.

The biggest bank in Turkey which is also one of the "most forward-thinking" banks in the country has joined another leader from the crypto space. Starting today, this partnership allows users to instantly deposit and take out Turkish Lira (TRY) via its iOS app and desktop at the "most competitive fees in Turkey."

With this step, the crypto exchange which recently announced Binance Cloud in its attempt to become the Amazon of the crypto space is further lowering the barrier to entry. Binance CEO, Changpeng Zhao said,

"As part of our mission to continue working on increasing the freedom of money worldwide and notably in a country that is fast-adopting digital assets, we are expanding the available options to lower the barrier to entry."

Marshall Islands' Sovereign Digital Currency Will Be Based on Algorand

The Republic of the Marshall Islands (RMI) has selected blockchain firm Algorand as technology partner for its national digital currency.

After first revealing its planned digital currency — the Marshallese Sovereign (SOV) — back in February 2018, the Marshall Islands has taken a further step in the development by partnering with major blockchain startup Algorand.

SOV supply will be algorithmically fixed to grow at 4% each year

According to a March 2 announcement, SFB Technologies, the company that develops SOV's blockchain infrastructure, revealed that the Marshallese digital currency will be based on Algorand technology. The Algorand protocol will be implemented to provide the Marshallese sovereign initiative with speed, scalability, security as well as required compliance controls such as identity management and compliance platform, the announcement reads.

In the statement, Algorand specified that the SOV will be circulating alongside the United States dollar, which is used as the official currency in the country, and help the Marshall Islands efficiently operate in the global economy. The national digital currency initiative will be regulated by the RMI government, while the SOV supply will be algorithmically fixed to grow at 4% each year in order to prevent inflation.

Dubai-based National Bank of Fujairah To Use RippleNet For Cross Border Payments

Through an announcement on their website , the National Bank of Fujairah (NBF) has struck a partnership with Ripple a leading enterprise Blockchain company. The Blockchain alternative will secure the clients real time payments whilst allowing clear end to end transaction tracking.

The NBF based in the UAE was founded in 1982 with main shareholders list including Government of Fujairah, Investment Corporation of Dubai and the Easa Saleh Al Gurg LLC. They have mainly offer Corporate and commercial banking and are well versed with treasury and trade finance.

Ripple to offer seamless cross border transactions

According to the bank's CEO Vince Cook, the integration of Ripple's Blockchain solution was prompted by the need to adjust with the dynamism of the banking sector. They also understand the potential of Blockchain technology that is set to align with their key objective of ensuring their clients have a smooth running experience.

"In a fast-moving environment, banks have to act with agility and constantly look for new and improved ways to service their clients. We understand the importance of leveraging Blockchain technology to deliver seamless and frictionless experiences to our clients."

Coronavirus is killing the Bitcoin conference business

- Organizers are cancelling and postponing conferences in Asia and Europe in response to the Coronavirus
- Major US conferences such as SXSW and Consensus are currently unaffected
- Smaller, more local events, online conferences and virtual reality could fill the gap until large gatherings are deemed safe

Hundreds of crypto delegates were converging on Paris today for the start of the third annual Ethereum Community Conference (EthCC)—one of the biggest events in the blockchain platform's calendar. In response to the threat of the coronavirus, attendees were putting on a brave face.

On Saturday, the French authorities announced a ban on large indoor gatherings; Paris has closed the Louvre, its eminent museum, and the Paris Half Marathon has been cancelled. Crypto events have followed suit, with the French capital's flagship blockchain event, Paris Blockchain Week, postponed until December 9, organisers today told Decrypt. (The bans don't apply to EthCC, as the event is for less than 5000 people.)

As the coronavirus—and fear of infection—spreads across the globe, could this be the end of crypto events as we know them? And what would that mean for an industry that's heavily weighted towards meet-ups and conference extravaganzas to woo investors and spread the word?

Big exchanges conduct a “hostile takeover” of Steem blockchain following TRON acquisition

Massive exchanges have long been a major point of centralization within the crypto industry, with this being further confirmed by recent actions reportedly taken by some major exchanges to pose a “hostile takeover” of the Steem blockchain using stakeholders’ deposited tokens.

This comes close on the heels of TRON’s recent acquisition of Steemit, sparking an inquiry into whether or not one can accurately deem the blockchain as being decentralized due to this governance flaw.

The Steemit saga continues evolving following recent TRON acquisition

As previously reported by CryptoSlate, the Justin Sun-led blockchain company TRON recently conducted an acquisition of blockchain platform Steemit – a popular content sharing platform that utilizes cryptocurrency to reward users for sharing content.

The acquisition was aimed at bringing the DApps that have been built on the Steem blockchain underneath TRON’s umbrella, with Justin Sun announcing multiple different initiatives aimed at bridging TRX into the Steem ecosystem in a recent open letter to the blockchain’s community.

“We have so much to work to do to make Steemit.com the power that it really can be. And there are many ways we can get it there, from bridging TRX, TRC10’s and TRC20’s into Communities to marketing and growing Steemit.com.”

Bitcoin Jumps Alongside Gold on Fiscal Stimulus Sentiment

Rival assets bitcoin and gold jumped hand-in-hand on Monday as investors pinned their hopes on central banks stimulating economies via new stimulus programs.

The bitcoin-to-dollar exchange rate surged 3.28 percent to hit an intraday high of \$8,64.08 following the European session open. At the same time, CME futures linked to the pair also notched higher by 3.57 percent, signaling a renewed bullish sentiment into the beginning of the new week.

Gold also witnessed growth in its investors' upside sentiment. The yellow metal on Monday rebounded by up to 1.56 percent to trade at \$1,611 an ounce. Meanwhile, its futures on COMEX also edged higher by 1.89 percent, a move that appeared in contrast with its frantic and disorderly selling last week.

The Perceivable Correlation

Indeed, both gold and bitcoin underperformed in times when traders hoped they wouldn't. Their markets were showing weakness as the Coronavirus started infecting more and more people outside China. Traders expressed shocks over the massive sell-offs, notably because bitcoin and gold had surged impressively against the US-Iran military tensions in January.

The low-confidence appeared mainly because the equities and bond yields were declining back then as well. Traders considered bitcoin and gold to behave as havens against the turmoil in risk-on assets. But with all of them falling in tandem, it showed investors were merely speculating on bitcoin and gold: Buying them at lows and selling them at highs.

Coincover's New Policy Protects Cryptocurrency Held in Hot Wallets Backed by Lloyd's

Lloyd's of London, the insurance behemoth, is backing a brand-new policy on protecting from hacks cryptocurrency that's being held in wallets.

The insurance is provided by the crypto lifestyle service provider Coinbase and underwritten by the Atrium insurance syndicate of Lloyd's, said Coincover on Sunday. When it comes to the liability policy, this is said to be a type of insurance that's new and has a dynamic limit increasing or decreasing, according to prices of the crypto assets it covers.

Coverage Limit Starts at \$1,280

The limits of the coverage start from 1,000 pounds (\$1,280). With the policy, traders and investors will be protected against theft of crypto held in their hot or online wallets. The Lloyd's head of innovation, Trevor Maynard, said the company he's working for is a "natural home for insurance innovation because of the unique ability of syndicates to collaborate to insure new things" and that cryptocurrency firms have found ways to protect from theft the digital assets of their clients.

A Panel of Lloyd's Underwriters Backing the Policy

TMK and Markel, both Lloyd's underwriters, are backing the new policy among others. They're also Lloyd's Product Innovation Facility (PIF) members. PIF is an initiative that aims to speed up the development of insurance products for non-standard and complex risk policies.

Coinbase Joins Japan's Self-Regulatory Organization for Crypto Firms

San Francisco-based Coinbase is still preparing behind the scenes for a presence in the Japanese market.

The popular cryptocurrency exchange, which previously applied for an operating license in the country, has now become a second-class member of the Japan Virtual Currency Exchange Association (JVCEA) – the self-regulatory organization given the mandate to oversee the industry by the Financial Services Agency (FSA) in 2018.

Announcing the news on Monday, the JVCEA said local firms Digital Asset Markets Inc. and Tokyo Hash have also joined the group alongside Coinbase as second-class members.

Coinbase has had a Japanese exchange in its sights since as far back as 2016, after it received a \$10.5 million investment from a group that included Bank of Tokyo Mitsubishi UFJ and Mitsubishi UFJ Capital.

In mid-2018, the firm named a chief executive for its local subsidiary, and later in the year indicated it was confident it would receive an operating license from the FSA before the end of 2019. That hasn't happened as of early 2020.

In becoming a member of the SRO, Coinbase joins other second-class member firms “applying for or planning to apply for virtual currency exchange registration as prescribed in Article 63-3 of the Payment Services Act,” according to the JVCEA.

Google Play Store Takes Down Crypto News Apps, Including Cointelegraph's

Google's Play Store for Android smartphone apps seems to have taken an issue with reporting on cryptocurrencies and blockchain news, taking down several notable apps, including ours.

The newest block?

As of 2:00 PM EST, apps of crypto news sites including Cointelegraph and CoinDesk were unavailable on the Play Store.

Google did not contact Cointelegraph regarding the planned removal. We have reached out to the company but received no response as of press time. This article will be updated with new information or comment from the company should we receive it.

For Cointelegraph's part, we have been operating much as we always have, and do not readily have an explanation for why the app is no longer available.

Earlier targeting of crypto

This is not the first time that the Play Store has set its sights on crypto. Near the end of December, the store took down an app for MetaMask. At the time, MetaMask co-lead developer Dan Findlay told Cointelegraph:

"I very much hope that this was an honest mistake on the part of Google's reviewers, but in combination with all the crypto YouTube bans, it definitely puts me at ease about how Google is engaging with decentralizing technologies."

PLATINUM PROJECT INFORMATION

World Market

Technology has revolutionized everything, and when we talk about technology, we cannot skip Artificial Intelligence (AI). AI is whereby machines simulate human intelligence, such that they are programmed to think and act like humans, but now more efficiently. With AI, machines can also do learning and problem solving just like humans.

BLOCKCHAIN TECHNOLOGY IN THE ENERGY SECTOR

Blockchain technology has revolutionized most industries and the energy industry is not left behind. As much as there have been many innovations of technology in the energy sector such as solar energy, electric vehicles, and smart metering, there is still much more that is yet to happen especially with the rise of blockchain technology. There are no limitations to the blockchain use case. It may be the solution to changing renewable energy standards, better data management, and changing the energy markets among so much more.

HOW AI IS INCREASINGLY USED IN TRADING

AI has been used in many industries including trading. Electronic trades account for almost half of the total revenues from cash equity trading. Most companies such as hedge funds, use AI-powered analysis to get investment ideas and build portfolios.

AI makes it easy to analyze data and execute trades at the best price. Through AI, analysts can be able to forecast markets with more accuracy. It is also easier for traders and exchange firms to efficiently mitigate risks for higher returns.

AI-POWERED TRADING RAISES NEW QUESTIONS

As much as AI has been believed to be the solution to trading technologies, there are still questions about what it can do. When it comes to market prices, it is hard to be predicted by AI as they are mostly random. Prices cannot be predicted as the market is very volatile. That makes machine-learning based predictions not to be very accurate hence may not be the best for automated trading.

That has made traders opt for quant trading strategies such as arbitrage trading and high-frequency trading. They rely on a sequence of predictable behaviors and biases.

HOW PROFITABLE ARE THE BEST STOCK TRADING ALGORITHMS?

Algorithmic trading is whereby you set certain conditions such as price and market conditions and once the preset conditions are met, a computer program automatically trades at high speeds and volume.

A computer program is used to execute the trade as it can do it more efficiently and fast as compared to a human. It can be done at a high frequency and speed that may be impossible to do in person.

The pre-set conditions may be the time, price, quantity, or any other market condition. Algo trading has also been used to increase efficiency as it rules out the possibility of human emotions on the trade, making the market more liquid, and the trading more systematic.

The best stock trading algorithms are more profitable compared to traditional human trading. There are many automated trading strategies in the market and they all come with different price tags. When estimating the returns, do not skip on inflation which is normally a rate of about 2% a year.

It is hard to have all the inside information on the profitable algorithm as most people who have developed one keep it a secret. That explains why most large-scale quantitative investment firms such as Sigma are secretive about their trading algorithms as they take it as their secret sauce. Most of the high performing platforms do not maintain the position no matter how consistent they are because there are always new players that will get into the market.

WHAT IS THE DIFFERENCE BETWEEN AI TRADING AND ALGO TRADING?

Algo trading is whereby a computer program follows a set of instructions set to execute a trade. AI trading, on the other hand, is whereby machine learning is used to observe, study and analyze market conditions, trading patterns, and data, then predict what will happen.

In Algo trading, it is a human who sets the conditions that should be met. With AI, artificial intelligence is used to set conditions after going through different parameters and analyzing them

HOW IS MACHINE LEARNING USED IN FINANCE?

Machine learning has been used for identifying complex trading patterns across different markets in real-time. It takes advantage of its high speed and big data processing power to give real-time updates. That explains why it is used in wall street and the United States in general.

The finance industry has taken advantage of technology to analyze conversions and financial data. That makes it easy to sift through relevant notes and large amounts of data and make market insights in real-time.

Some companies such as Kavout is using the AI system to process data to rank stocks. The company uses AI for pattern recognition and price forecasting so that it can be able to recommend daily top stocks. It uses AI algorithms to make its portfolios.

Machine learning has helped finance companies to come up with algorithmic trading strategies That, has helped to solve investment challenges. It has made it easy to analyze data without necessarily having in-house expertise.

AI trading companies such as Epoque has an AI system that works in three phases, the first is a strategy where observation and analysis of potential trades are done, the second one is where orders are created and the third is where active orders are implemented and machine learning is used to analyze performance.

Machine learning has been used by investment companies for coming up with strategies such as intelligent asset allocation for deep learning and prediction of different assets of a particular portfolio.

Machine learning has been used for creating a fully autonomous stock trading system without requiring any updates or adjustments.

HOW TO START WITH ALGORITHMIC TRADING USING MACHINE LEARNING?

For starters, to do algorithmic trading using machine learning, you need to have coding skills.

Once you know to code, you can then learn on the different machine learning techniques such as classification, clustering, and regression.

When machine learning and algorithmic trading are integrated, you have to set the instructions to the computer and machine learning changes those set conditions according to the market conditions. Even though neural network works, with machine learning you don't have to monitor the conditions to set them for algo-trading.

Machine learning algorithms are therefore the solution to trading. Even though there are not very accurate, they are very accurate especially for making predictions on price movements of stock.

A SOLUTION FOR RETAIL TRADERS – WORLD MARKETS AI MANAGED ACCOUNTS

World markets take advantage of AI in trading as it acknowledges that AI will never be on the same level as human trading. It uses advanced AI trading tools to make sure that trading is highly profitable. It monitors and analyzes many potential trades to explore low-risk opportunities available. You get a trader-operated artificial intelligence managed trading account with over 100% compound return guaranteed regardless of the market condition.

Digital gold:

You can purchase digital gold from the platform or you can get physical gold bars that are held by a licensed institution so that you can easily liquidate for fiat or cryptocurrency.

Gold/silver bullion investment opportunities:

Silver and gold are good investment alternatives as they are more inflation-proof therefore they tend to hold their value over time.

Investment in exotic metals:

There are other exotic metals that one can invest in such as platinum and palladium.

Exchange platform:

World Markets also offers an exchange platform where you can trade your currencies. In addition to that, there is an offer where you are given a free wallet.

Education:

Through the site, you will master your financial literacy and be a financial guru.

Affiliate:

Apart from all other great products the platform has to offer, you can also earn a commission through referrals.

Professional Managed Trading Fund

Trader-Operated Artificial Intelligence Managed Trading Accounts.

Over 100% Compound return the last Quarter - regardless of what direction the market moves...

The advertisement features a futuristic scene with a white robot and a person in a yellow shirt interacting with a large, glowing digital screen. The screen displays various financial charts, including a bar chart and a line graph. The background is dark blue with glowing lines and data points. The text is white and yellow, providing a high-contrast look.

TPX NETWORK – SOLVING A PROBLEM

Hi Crypto Network,

TPX Network was set up to solve several problems in this new era of technology. Utilising blockchain technology and the global uncertainty of the financial markets.

With the world's currencies in a state of panic and uncertainty with continued quantitative easing programs and increased borrowing only draws more attention to cryptocurrencies and gold being a valuable and major opportunity for change. TPX has positioned itself in the heart of this situation bridging the gap between Gold and Cryptocurrencies in a very unique way. It's known and accepted widely that any investment portfolio should have a % in gold or exposure to the gold markets. TPX offers a cryptocurrency that is backed by Gold, this is not a stable coin but a cryptocurrency that will always have value as each token purchased results in 1gram of gold purchase so is always as a minimum valued at the price of gold. This provides unique opportunities for traders and investors to reap the benefits of the cryptocurrency space, speculating and trading on the TPXGOLD token but also have the security that it will never drop below the price of gold.

TPX NETWORK HAS A SOLUTION FOR TRADITIONAL INVESTORS AND CRYPTO TRADERS.

- 1: We offer expert one to one service and personal advice with our gold brokers.
- 2: We offer Free secure storage for all gold bought through us at Brinks.
- 3: We use Lloyd's of London to fully insure your gold from the time of purchase.
- 4: Transportation from market to depository is covered by us.
- 5: We offer a guaranteed minimum yield annually for total peace of mind.
- 6: Gold is independently audited bi-annually.
- 7: We have plans/options to suit everyone, from the seasoned investor to newcomers to the Gold and investment markets
- 8: Tokens are listed on livecoin.net if you would like to purchase them now .

For further information on Physical bullion. visit www.tpxbullion.com

For information on our gold backed token

visit www.tpxnetwork.com or purchase from www.livecoin.net
