MACHINE DEMO @ STAND J40

UKCS The UK
Concrete
Show 2025
26 & 27 February 2025 | NEC | Birmingham | UK

Richard Bradbury
Event Director
+44 (0) 115 945 3889
richard.bradbury@concreteshow.co.uk

Welcome

The QMJ team are delighted to host the annual meeting place for the concrete industry. Building on the success of 2024, our 13th edition is 10% larger and fills Hall 17 at the NEC this year. The UK Concrete Show now also absorbs Concrete Expo, which was acquired by QMJ last summer - bringing everything together under one roof to make your experience as time efficient and comprehensive as possible. And car parking is on us again, to keep your costs down and make visiting as easy as possible.

Get face-to-face with the exhibitors, explore their products and services in depth, and ask them the difficult questions directly so you can make the best buying decisions for your business. You'll be able to compare most of the established leading brands and new entrants to the UK and Ireland market, showcasing everything from volumetric trucks, batching plants and pumps to formwork, admixtures, and low-carbon concrete solutions.

There's more feature content than ever before too, and it's well worth taking the time to put a schedule together so you make the most of your day.....

Join the debate at the **Concrete Connect seminar theatre**, where our professional host Susannah Streeter will oversee a seminar programme featuring over 30 speakers. Six sessions over two days will provide invaluable insights on the future of the concrete industry. Themes covered include sustainable concrete solutions; graphene in concrete; repair and maintenance; the latest ready-mix innovation; digital monitoring and measurement of fresh concrete (from the Concrete Society); attracting and retaining talent for your business; and a plethora of industry spotlights.

Make the most of the networking opportunities available at the show including our **Find your Community** area (C61-67), the go-to hub for industry connections and support that provides a dedicated area for our partner organisations, each offering valuable insights, expert advice, and tailored guidance to attendees.

Discover the latest technology to improve your business's productivity, and keep ahead of the competition, at the **New Product Hub**. Vote for your favourite product with the token given to you as you enter the show. We'll be announcing the winner on concreteconnect.co.uk shortly after the show.

Appreciate exemplary design and use of concrete at the **Concrete Society Awards Gallery**, a photographic collection of the 2024 winning projects.

And finally, recognise the achievements and efforts of those in the early stage of their career in the sector, as we present the inaugural **Emerging Talent Awards** on the Thursday afternoon of the show at the Concrete Connect seminar theatre.

Have a great day and enjoy the show!

Floorplan

Wednesday 26th February

Morning Session

10:25 - 12:30

Sustainable concrete solutions for a greener tomorrow

As the industry moves towards the Net Zero 2050 goal, lower-carbon concrete is becoming a priority. This session explores key technologies driving decarbonisation across the UK cement and concrete sector; the importance of collaboration across the supply and contractor chain if targets are to be achieved; and shines a spotlight on the latest research projects creating innovative solutions for a greener tomorrow.

10:30 - 10:45

UK Concrete and Cement: Advancing the Roadmap to Net Zero and Beyond

Elaine Toogood, Director, Architecture and Sustainable Design, The Concrete Centre

10:45 - 11:05

Launching the UK's biggest industrial scale ultra-low carbon cement factory with Material Evolution

Dr Liz Gilligan, CEO, Material Evolution

11:05 - 11:25

The low carbon challenge: adoption, innovation and how to drive change

Name, Job Title, Tarmac, and Tony Carney, Managing Director, Huyton Asphalt Civils

11:25 - 11:45

Case Study: Low Clinker Concrete Solutions: Unveil the power of MasterCO2re which simplifies low-clinker concrete production

Jordan Smith, Head of Technical & Marketing, Master Builders Solutions

11:45 - 12:00

Case Study: carbon negative facing bricks

Franz-Josef Papen, International Sales Manager, Rekers GmbH Maschinen- und Anlagenbau

12:00 - 12:20

Practical circular economy applications of recycled and industrial steel fibres in structural concrete

Dr Sakdirat Kaewunruen, Reader in Railway and Civil Engineering, University of Birmingham

Lunchtime Session

13:00 - 14:00

Graphene in concrete: performance, sustainability and commerciality

Hosted by The Graphene Council and featuring the latest advancements in graphene-enhanced concrete technology. This cutting-edge session will include presentations from industry leaders Versarien and Concretene, showcasing their commercially developed solutions. Attendees will gain insights into how graphene is revolutionizing the concrete industry, offering improved strength, durability, and significant reductions in CO₂ emissions. The Graphene Council will provide context on the broader implications of these innovations for the construction sector and their potential to drive sustainability in concrete production.

13:05 - 13:20

Decarbonising construction using Graphen

Dr Chirag Ratwani, Graphene Technical Specialist, The Graphene Council

13:20 - 13:35

Building the future with Graphene

Dr Stephen Hodge, CEO, Versarien plc

13:35 - 13:50

Commercial viability of nanomaterials in concrete: supply, scale-up and adoption

Mike Harrison, CEO, Concretene

14:00 - 14:25

Digitalisation spotlight

AI technology optimisation: How to engineer out concrete over performance to deliver CO₂ reductions

Joe Kirwin, Commercial Manager for the London Southeast RMX, Tarmac

Afternoon Session

15:00 - 16:20

Repair and maintenance: protecting our built heritage

From concrete scanning, structural applications and injection techniques to waterproofing systems and repair mortars, the management of concrete repair and maintenance is being increasingly driven by sustainability. Whether it's addressing deterioration in infrastructure, industrial flooring, or other assets, expertise in concrete care can help maintain and extend the life of our built environment.

15:05 - 15:25

Design of CFRP strengthening for concrete structures with EN 1992-1-1 (2023)

Craig Giaccio, Technical Director, Hewson Consulting

15:25 - 15:45

Repairing for a sustainable future

Craig Hannam, Market Sector Manager and Andy Hatch, National Concrete Repair Specification Manager, Fosroc

15:45 - 16:05

Enhancing resilience of underground concrete structures using indigenous soil bacteria and supplementary materials

Abdurahim Abogdera, Associate Lecturer and Full Time Researcher, University of Derby

Hosted by Susannah Streeter, a professional broadcaster and conference moderator, each session will conclude with a panel and live Q&A with the audience.

Thursday 27th February

Morning Session

10:30 - 11:30

Ready for the revolution: from drive-throughs to eMixers

The ready-mix concrete sector is undergoing a revolution as innovation delivers greater productivity and more sustainable, lower carbon outcomes. Find out about the latest 'drive-through' technology that can offer more bespoke and efficient self-service solutions. Discover how major producer Tarmac are leading the electrification charge by overcoming the barriers holding back the widespread adoption of eMixers.

10:35 - 10:55

Mixing business with sustainability: The rise of self-service concrete, mortar and screed technology

Henrik B. Jeppesen, CEO, fibo Intercon

10:55 - 11:20

Electrifying! concrete delivery and low carbon outcomes

Ben Garner, Head of Logistics, Developments and Standards, Tarmac

11:45 - 12:50

Spotlights session

Developed by Imperial College, find out about Kiacrete – a new puddle-free pavement technology embracing the challenges of climate change; get guidance on choosing a floor screed and understand the benefits of using sophisticated liquid systems; and attract new customers for your business with invaluable tips from a digital marketing consultancy.

11:45 - 12:05

Kiacrete: A new puddle-free pavement

Dr Alalea Kia, UKRI Future Leaders and Fellow and a Royal Academy of Engineering (RAEng) Associate Research Fellow, Imperial College London

12:05 - 12:30

Choosing a floor screed - the market move to liquids

Andy Vincent, Specifications Manager, McGraths (Cemfloor)

12:30 - 12:50

Attract new customers from your digital advertising campaigns

Xavier Hodgetts and Ben Shaw, Account Directors, Adtrak

Lunchtime Session

13:00 - 14:30

Digital monitoring and measurement of fresh concrete

The adoption of digital measurement and monitoring can provide improved visibility and traceability to drive quality and productivity improvements and associated cost reductions. Reduction in plant/person interface adds safety benefits and reduced wastage and efficient use of resources brings sustainability benefits. Digital monitoring systems provide the real-time measurement and recording of fresh concrete properties such as temperature, air content and consistence. These calibrated, digital systems may also be capable of adjusting concrete properties such as the addition of water or admixture to correct consistence. Hosted by the CEO of the Concrete Society, Claire Ackerman, this session will share and discuss the latest guidance from the Concrete Society and i3P and include a case study that demonstrates the benefits of digital systems.

13:05 - 13:30

New guidance for digital monitoring and measurement of fresh concrete

Steve Phipps, Head of Materials Engineering, Balfour Beatty Vinci

13:30 - 13:45

Use of Verifi at HS2

Helen Frape, Business Development Manager, Verifi, GCP

13:45 - 14:00

Panel session and Q&A on the potential of Digital Monitoring and Measurement

Nick Sumption, i3P
Ian Evans, Concrete Society
Russell Elfenbein, Cloud Cycle

Afternoon Session

14:10 - 15:30

Attracting and retaining talent: education, training and the power of People

How businesses can attract, train, and retain the next generation of concrete professionals is essential for your business to prosper and successfully meet the growing challenges of sustainability and digitalisation. The Institute of Concrete Technology provide an industry perspective on the training and qualifications available to enhance your career prospects; Culture Kick stress the importance of creating the right culture for young people to thrive in; and finally the opportunities available through the recently launched Student and Young Professional Network (ICT SYPro) are promoted.

14:15 - 14:30

Education, skills, training and competence, an industry perspective

Robert Lewis, Chair of Technical and Education and Past President, ICT and Technical Manager, Ferrogllobe

14:30 - 14:55

Building a high-performance culture to encourage young leaders

Becky Ray, CEO, Culture Kick Ltd

14:55 - 15:10

Empowering the future of concrete: Knowledge and networking through ICT-SYPro

Dr Aneeta Mary Joseph, Materials Engineer, Mott MacDonald

15:10 - 15:30

Emerging Talent Awards presentation to winners

Emerging Talent Award

2025

5052

Meet the shortlist

We've been delighted by the response to our inaugural **Emerging Talent Awards**, receiving nominations from across the industry, with submissions reflecting the contribution of a wide range of entrants.

The Awards are about recognising and rewarding the achievements of those at the beginning of their career in the sector, and form part of the Thursday afternoon session '**Attracting and retaining talent: education, training, and the power of people**'. This session will be hosted by leading broadcaster and sustainability commentator Susannah Streeter and culminates with the award presentations.

First of all a big thank you to everyone that has submitted a nomination, and after much consideration we've managed to narrow the nominees down to a final shortlist of 10.

Join us for the afternoon session from 2:10pm on Thursday 27th February in the Concrete Connect Seminar Theatre, where the final winners will be revealed and presented with their awards!

Find Your Community

By the industry. For the industry.

Find your community at
The UK Concrete Show...

Visit the new "Find Your Community" area – the go-to hub for industry connections and support.

This dedicated space showcases our partner organisations, each offering valuable insights, expert advice, and tailored guidance to attendees.

It's an excellent opportunity to explore the advantages of joining these organisations, from professional development and networking, to exclusive resources and industry updates.

Whether you're seeking collaboration, career growth, or simply want to stay informed about the latest in concrete innovation, the "Find Your Community" area is the perfect place to connect, explore professional opportunities, and strengthen your ties within the concrete industry.

The Concrete Society | Stand C61

An independent membership organisation dedicated to supporting the use of concrete: Encouraging the exchange of knowledge and experience across all disciplines; promoting excellence in design, construction, appearance and performance; and driving innovation.

The Institute of Concrete Technology | Stand C62

Promoting concrete technology as a recognised engineering discipline and advancing the professional status of practicing concrete technologists worldwide.

Association Of Concrete Industrial Flooring Contractors

Stand C63

Representing specialist contractors and their associates in the construction of concrete industrial floors.

Structural Concrete Alliance | Stand C64

Bringing together the Concrete Repair Association, Corrosion Prevention Association and Sprayed Concrete Association to provide a single co-ordinated voice, and source of reference for the structural concrete refurbishment and repair industry.

The Graphene Council | Stand C67

Serving the global community of engineers, scientist and R&D professionals with an interest in graphene and related 2D advanced materials.

The Institute of Quarrying | Stand C65

Promoting the positive impact of the quarrying industry, the career opportunities available and supporting professionals working within it.

British Aggregates Association | Stand C66

Providing essential support and advice in all health and safety, planning, transport, environmental, technical and regulatory issues; whilst ensuring that the voice of the independent sector is heard at all levels of the UK administrations.

The Drilling & Sawing Association | Stand C68

Promoting the work of professional drilling and sawing contractors by highlighting the main advantages of cutting concrete with diamond tools, which include precision cutting within the shortest time scale, reduced noise, dust and debris and maintenance of structural integrity.

THE CONCRETE SOCIETY AWARDS 2025

Register your project now...

*Nominations are open for the
2025 Concrete Society Awards*

Does your organisation have a project that shows
excellence in the use of concrete and the potential
to win a coveted Concrete Society award? If so,
why not register now?

The Overall Winner, plus the Highly
Commended projects are presented
with their awards at the prestigious
Awards Dinner, which takes place on 12
November at The Royal Lancaster Hotel,
London.

*Nominated projects should be
substantially complete between
Autumn 2023 and Spring 2025.*

*Society members and non-members are
eligible to enter.*

*Please see Awards website for sponsorship
opportunities.*

**To nominate your project
for the 2025 Concrete Society Awards:**

Aliva Xrock

C20

Normet's long-standing technology experience and customer support network is now reinforced with the world-leading products and solutions manufactured by Rambooms. A comprehensive product lineup of Normet Xrock hydraulic breakers, breaker booms and Xrock Automation system is designed to meet the demands of a variety of applications in underground and surface mining, and the construction business.

Aliva concrete-spraying equipment meets all shotcrete concrete needs in mining, tunnelling, or construction. Durable and high-quality rotor machines, manipulators and dosing units maximise productivity in any shotcrete application. Products are precision-designed for specific concrete spraying needs, ensuring optimal performance in

their dedicated area – from the complexities of repairing cracked concrete to slope stabilisation and underground tunnelling. Aliva provides a tailored solution for each application, maintaining a commitment to reliability and quality.

Cantech

E54

Control specialists Cantech will be demonstrating its family of state-of-the-art PC-based systems for concrete and mortar batching and associated processes.

These encompass the overall process from quotation and setting up of load requirements on to automatic control of the complete batching process including traceable recording of the contents of every batch/load; then invoicing of each load produced. These include cloud-based facilities which allow the pre-order processes to be handled from an orders office and then automatically produced by a batching plant on a different site; and similarly allowing details of loads made to be examined from a remote area laboratory or when on the move.

Experienced personnel will be on the stand to demonstrate

how the Excel-based batch data logging/analysis provides email alerts of out-of-tolerance batches and recurring plant faults and facilities allowing preventative maintenance scheduling.

Cemfloor By McGraths

C5

McGrath's Limestone (Cong) has been producing cement-based liquid screeds for the past 15 years in association with French company Cemexa Technologies Ltd. It has recently developed a new cement-based liquid screed product for both commercial and domestic use. Cemfloor can be used in place of traditional sand/cement screeds and calcium sulphate screeds in unbonded, bonded, domestic, and commercial floors. Cemfloor is a cement-based liquid screed; which has a superior drying time, exceptional thermal conductivity, minimal or zero drying

shrinkage, no laitance dust on the dried surface and numerous other benefits. Cemfloor screeds comply with EN 13813:2002 screed materials and floor screeds properties and requirements.

Eco Pan Ltd C51

Eco-Pan provide a sustainable concrete washout management service for contractors' concreting requirements, ensuring that there is no risk to the environment during any concrete pumping activities allowing the process to remain discharge compliant.

Eco-Pan offer a service that is recognised for delivering a valuable solution at all stages of concreting, from site inception to completion. The company's sustainable pan recycling comes in different sizes, requiring the smallest of footprints for a solution of its kind. Eco-Pan offers a complete concrete washout managed service with same-day collection and delivery available.

Eco-Pans are designed to perform and last through the harshest construction sites. Watertight containers ensure no liners are needed to contain materials as well as prevent spillage to clean up after. Fork channels and lifting eyes allow for easy transportation, as well as the container's small footprint which makes accessibility in restricted areas a thing of the past.

fibo Collect UK

J40

fibo Collect is revolutionising the UK and Irish markets as the first automated vending machine for concrete, mortar, screed, and loose aggregate. Now operational across 11 locations, with four more launching soon, this innovative solution combines a pan mixer batching plant with a self-cleaning water-recycling system and intuitive touch-screen technology, it was the winner of the Building Innovation 2024 Award for 'Most Innovative Hardware Product'. Customers can conveniently order quantities ranging from as little as 0.25m³ to larger volumes, eliminating the need for traditional on-site mixing and solving challenges associated with the delivery of smaller loads. fibo Collect is setting a new standard for efficiency and accessibility in construction materials.

Hendriks Formwork Solutions D44

Hendriks has a proven experience in providing formwork solutions for prefabricated concrete producers as well as major infrastructure projects, housing and apartment building projects.

It delivers high-quality and innovative formwork worldwide for a variety of major precast producers or infrastructure projects, including bridge components and tunnel segments.

Its housing formwork has played a major role in the modernisation of construction in the Netherlands. The formwork can be hired or bought and is equipped with all the essential safety features, ensuring the equipment meets the highest standards for a reliable, safe, and efficient project.

For prefabricated concrete clients, it provides easy-to-use, durable and safe moulds. From a standard mould to fully automated carousel systems which enables clients to produce faster, more cost effectively to a higher quality. In-house production

and skilled engineers ensure no challenge is too great. As an addition to these services, a mobile service-team provides installation, training and warranty services wherever the moulds are located.

O.C.O Technology Ltd B41

Introducing M-LS - the carbon-negative aggregate revolution. O.C.O Technology is transforming the construction industry with its carbon-negative aggregate, a manufactured limestone, which can be used in many applications including ready-mix concrete, concrete blocks and precast, as well as numerous fill applications. O.C.O Technology specialises in the production of sustainable construction products.

The manufacturing process creates a high-performing aggregate, transforming a waste product into a valuable resource and enables circular economies. By reducing reliance on traditional virgin aggregates, the M-LS reduces carbon footprint and supports the global shift towards a greener construction market. The consistency of M-LS will provide a seamless integration into ready-mix designs, providing durability, and reliability. M-LS is ideal for forward-thinking businesses, who aim to meet stringent sustainability goals and have a commitment to building a better future.

Oscrete D50

Oscrete is one of the UK's major concrete admixture manufacturers. Based in Bradford, Oscrete supplies concrete admixtures, reinforcing fibres, mould release agents, concrete treatments and speciality additives to all sectors of the concrete and mortar production industry.

Oscrete is a leading producer

and supplier to the UK precast concrete industry and has an extensive range of admixtures which are individually created for use in specific precast disciplines, from concrete block-paving production, efflorescence control to self-compacting concrete.

Oscrete is engaged with the UK ready-mix concrete and mortar industries through its comprehensive range of polycarboxylate- and lignosulphonate-based performance admixtures which create performance benefits and cost savings in use.

Additionally, Oscrete is a major supplier of structural and shrinkage control fibres for concrete and screeds. Oscrete represents and distributes the Forta Corporation and Owens Corning fibres in the UK and Ireland.

As part of the Christeyns UK group of businesses, Oscrete operates from a large manufacturing site which boasts concrete testing and R&D laboratories, modern liquid and powder production facilities, warehousing and logistics and a highly skilled customer service team. Oscrete uses its own fleet of delivery vehicles including a bulk liquid tanker for large admixture deliveries.

Proteus Equipment Ltd **D55**

Proteus Equipment has been in the construction business since 1985, and has been supplying concrete duvets for many years.

Proteus concrete duvets have numerous benefits including: insulating and protecting curing

concrete from temperature fluctuations and cold snaps, ensuring stable, uniform quality; speeding up productivity by significantly reducing curing times; retaining heat and moisture to reduce energy consumption and optimise cement content; combating rising energy bills by reducing heating costs in the production hall; lightweight and easy to handle with multi-layer insulated construction and tough outer foil; high-quality insulation protects curing concrete from excessive heat in summer, preventing rapid moisture loss and ensuring structural integrity; available in various configurations from simple rectangular sheets to large roll-mounted systems, customised shapes, sizes, foil types and insulation thickness.

By optimising curing conditions year-round, concrete duvets improve productivity, enhance concrete quality, and reduce material waste, making them an invaluable asset for any precast operation.

Utranazz A40, A60, M2

With over 55 years' experience, Utranazz is proud to offer the UK's largest range of concrete equipment. Utranazz is a one-stop solution for all concrete equipment needs, making it easy and efficient to source everything from a trusted, single supplier. The range includes: concrete truck mixers, volumetric concrete mixers, concrete pumps, batching plants, rough terrain mixers, cement silos, screed and mortar equipment, concrete block moulds and more.

Now available in the UK through Utranazz are products from the IMER Group. Founded in 1962, the IMER Group is Europe's largest manufacturer of concrete truck mixers. Its extensive product range includes concrete truck mixers, concrete batching plants – including self-service, precast plants, and vibroforming machines – all engineered for durability and precision.

- Sectors covered - aggregates, ready mixed concrete, asphalt, cement, waste management and the full range of concrete products
- Published reports include
 - GB market surveys on each sector showing market size, trends, companies and prospects
 - Annual reports listing outputs and company market shares
 - Planning reports showing the latest planning developments in each sector

If your needs are not met by our published reports we will deliver a tailored research project to you. Over 50 surveys are commissioned each year by individual clients including some or all of the following:

- Assessing market size and prospects for a new investment
- Business and product development
- Acquisition appraisals and commercial due diligence
- Analysis of companies, markets and prices
- Market research

Wasa Palletts

C10

Constant improvements to the Uniplast board have led to Wasa Uniplast Ultra. Comprising microfibres in a homogeneous, solid plastic provide even greater stability without the need for profiles and a reduction in board thickness. Demonstrably high and uniform vibration transmission ensures faster and better compaction. Designed for short cycle times under the most demanding conditions, the Wasa Uniplast Ultra boasts the highest performance ratings the company has ever offered.

Wasa also manufacture wet-cast moulds made of the highest quality polyurethane to client's own design and specification, either singly or composite (several units in one large mould). The Wasa carrier system ensures zero warp and the highest possible stability.

Call for Concrete Society Award nominations

THE CONCRETE
SOCIETY
AWARDS 2025

Nominations are now open for the highly anticipated Concrete Society Awards 2025, a cornerstone of excellence in the construction industry. Recognised for celebrating innovation and craftsmanship, the awards generate significant publicity for all shortlisted projects, highlighting the versatility and ingenuity of concrete applications.

The Concrete Society encourages

submissions showcasing the diverse potential of concrete. Past winners have included private homes, hotels, bridges, coastal works, churches, offices, wastewater treatment plants, and even innovative sculptures.

Both new constructions and repurposed buildings are eligible, provided they are UK-based and substantially completed between Autumn 2023 and Spring 2025.

The awards generate extensive publicity for all companies shortlisted.

The nominee for the 'Overall' Gold winner and 'Highly Commended' Silver winners will receive a specially designed concrete trophy. All shortlisted projects will receive a 'Certificate of Commendation'.

Last year's winner

The 2024 awards crowned The Whiteleys Redevelopment in Bayswater, London, as the overall winner (see p48 for more information).

This project transformed the historic Whiteleys shopping centre into a mixed-use residential and retail space, achieving a BREEAM 'Excellent' rating while preserving its Grade II-listed façade.

Get involved

Any organisation involved in a project can enter by completing the nomination form available on The Concrete Society website. Sponsorship opportunities are also open, offering a unique chance to support and gain visibility in one of the industry's most prestigious events.

For more information and to download an entry form, visit the Concrete Awards' website - concrete-awards.org.uk

Announcements of the awards will be made at the 57th Awards Dinner to be held on Wednesday 12 November 2025 at The Royal Lancaster Hotel, London.

The
Concrete Society
Your concrete community. Est. 1966

Based in Sandhurst, Berkshire, The Concrete Society was founded in 1966 and remains an independent technical organisation with a broad membership base that includes professional engineers and designers; the contracting and material supply industry, academia and client bodies from over 60 countries.

The Society offers a comprehensive portfolio of products and services to the industry including the highly regarded Advisory Service, which offers prompt and impartial support to industry clients either on-site or by telephone and e-mail.

It is also highly regarded for its magazines and technical reports providing an invaluable information resource.

Additionally, The Society provides increased opportunities for professional development in concrete. It also runs regular day courses on varying subjects for the industry and bespoke training for members. Membership involvement is key to the enduring success of The Society with a strong UK Regional Network providing both social and technical support activities.

The Concrete Society Awards 2024 winners

Overall winner Whiteleys Development, Bayswater, London

The Whiteley is the large-scale reimagining of the former Whiteleys shopping centre in London's Bayswater. This huge restoration project includes the construction of a deep three-level basement and a ten-storey superstructure mixed residential and retail space, set behind a retained and refurbished Grade II-listed façade. (Photo: Nigel Young, Dare & Hier Media, Aaron Hargreaves)

Highly commended

Everton FC Stadium, Bramley Moore Dock

Rising from the banks of the River Mersey at Bramley Moore Dock, the new 52,888-seater stadium comprises over 14,000 precast concrete units – from innovative double-terracing to the columns, beams, twin walls, lattice slabs and façade panels. Combining meticulous BIM and innovative precast, the end result is a once-in-a-generation stadium. (Photo: Emma Simpson / Everton FC)

Highly commended

Lost Shore Surf Resort, Edinburgh

Craigpark Quarry, Edinburgh, was an infilled quarry that had been partly remediated into a country park. The accessible location has now been redeveloped to provide a leisure resort and Europe's largest wave pool – 23,500m³ in area – with 50 million litres of retained water in a 10,500m³ water-resistant reinforced concrete structure. With a heavily designed and detailed structure to resist shrinkage, it required a specialist selection of materials, testing and mix design.

The Peninsula London, Belgravia

The Peninsula London is a project of exceptional quality, delivering the most significant hotel and residences in London in recent times. Concrete was the material of choice for the structure of the building from very early in the design process. The project embraced top-down construction for the basement areas, post-tensioned concrete flat slabs for the upper floors and precast concrete for the façades. Reciprocal House, Hampstead, London

This new four-storey house was designed to complement Foster Associates' lightweight single-storey structure of steel, concrete blocks and large-span glazing. The industrial character has been retained, with the elemental quality of the new house evident in the highly effective palette of timeless materials – primarily concrete, aluminium and glass. (Photo: Schnepf Renou)

TTP Campus, Melbourne

The single-storey TTP Campus has been moulded to the non-hierarchical ethos of TTP and its passion for invention. Its exposed concrete design maximises openness and flexibility, providing high energy efficiency and minimising structural loads. The use of concrete was central to TTP's aspirations and its vision of a high-tech building that would stand the test of time. (Photo: Hutton+Crow)
