**Transmutation of the Elements of Matter,  
part 2: Under Pressure**  
([https://healingtones.org/2022/11/17/trans  
of-the-elements-of-matter-part-2-under-  
pressure/](https://healingtones.org/2022/11/17/trans-of-the-elements-of-matter-part-2-under-pressure/))

*"The elements of matter are but varying aggregations  
of corpuscular light units gathered together in  
systems familiarly known as atoms." —Walter  
Russell*

(<https://attunementwithsacredsound.files.wordpress.com/2022/09/1.jpg>).

THERE ARE NOT NUMEROUS ELEMENTS.

According to Dr. Walter Russell, from Nature's point of view, there is only *one* substance, Carbon, undergoing changes under changing pressure and transmuting through ten octaves of seven tones each, every element a precursor of the next. "*A radium particle was once a light unit of hydrogen and will be so again. More than this, an atom of any element actually contains within itself all of the other elements.*" More about this is my next post.

In the vibrational context of Creation, that One Substance is called Light. In a spiritual context, that substance is called Love. Out of the Light of Love all substance is created . . . and transmuted by Love..

All substance in the Creating Universe is under pressure to change, to transmute to a higher vibration . . . including the substance that comprises our

physical bodies — and they do transmute at death, at least some of it, leaving the greater portion of mineral ash to fall back down into the earth from which it transmuted to a level just above the mineral kingdom to the animal kingdom.

These are the “kingdoms of this world” that are to become the “Kingdom of our Lord and of His Christ.” This restoration awaits the restoration and ascension of Man to his ordained place as keeper of the Garden of Eden on Earth. What needs to be restored, and transmuted, is the substance of human consciousness. Much more of the substance of our physical bodies, and of the entire planet Earth, can and needs to be transmuted than is now occurring. That transmutation will follow in the wake of the restoration of Man. My rationale in writing this blog is that human consciousness might be elevated to a level where understanding of the Whole Holy World is advanced by at least some degree. These are my thoughts as I enter the Golden Years of my life cycle.

In this series I will consider the process by which the elements of matter transmute under pressure to higher and higher levels in the ten octaves of elemental progression to higher tones. I will call on Dr. Walter Russell to guide us through this consideration. The excerpts I will be using are from

his 1955 published work *A NEW CONCEPT of the UNIVERSE* and his 1926 signature work *THE UNIVERSAL ONE*. I will start at the beginning with Dr. Russell's stated Life Principle.

\* \* \*

## THE LIFE PRINCIPLE

### LIFE IS THE PULSING, ELECTRO-MAGNETIC OSCILLATION OF THINKING MIND

All life is immortal life. There is no mortal life. Life is a vitalizing property of all matter.

Life is in and of all matter.

Man's concept of life is not logical.

Man conceives life to be a property apart from matter, quickening compound elements of inorganic matter into living, functioning, organic beings.

Man defines organic matter as that in which life begins to function, imbuing it with vitality and intelligence. Man defines inorganic matter as those elements or compounds of matter in which there is no life and in which there is no vitality nor intelligence.

Man conceives life as spontaneously generated in matter at favorable temperatures and under favorable conditions. Such concepts are not true concepts.

In searching for the life principle man is attempting to discover something corresponding to a germ which quickens lifeless matter. Life is not a germ and no matter is lifeless.

Life is in and of all things from the beginning, always and forever.

Life has no beginning. Life has no ending. Life is eternal.

Life is in and of all inorganic as well as all organic matter.

Life is in and of all of the elements and the atoms of the elements and the compounds of the elements.

Life is in and of the sun of the atom, the planets of the atom, and the heavens surrounding the universe of the atom.

Life is the effect produced on the substance of Mind by the sequence of alternating electromagnetic pulsations which constitute the process of thinking. The progress of this effect is registered in integrating

light and manifests itself in that orderly periodic phenomenon inherent in all matter and all things which man calls “growth.”

All matter is evolving.

All “growing” things are imbued with the life principle.

All things are “growing” things.

All matter is growing.

All matter is living.

Life is merely the registration, in matter, of states of motion of thinking Mind.

The substance of Mind has the appearance of many states of motion which man calls the “elements of matter.”

The “elements of matter” do not vary in substance. They vary only in their states of motion.

All motion is periodic and evolutionary.

All motion is motion in equilibrium. No other motion is possible.

All motion has the appearance of being divided into opposites. .

These opposites of motion shall henceforth be termed “motion-in-inertia” and ” motion-in-opposition. “

All that appearance which man calls matter is “motion-in-opposition.”

Motion-in-opposition is under either preponderantly electric or magnetic domination. It is a state of motion where pressures are un-equalized and sustained in their state of un-equalization by the resistance of the two opposing forces in motion. The point of maximum motion-in-opposition is the nuclear center of a unit or system where opposing pressures reach their point of maximum pressure.

Form of matter disappears into motion-in-inertia.

Motion-in-inertia is equally electric and magnetic. Neither force dominates. It is a state of motion where pressures are equalized. Man’s concept of life is energized, organic substance. Man’s concept of death is de-energized, organic substance.

There is no death. Life is eternal.

The One substance of the universe cannot become de-energized. Man's concept of life belongs to motion-in-opposition.

Man's concept of death belongs to motion-in-inertia.

Life belongs, in principle, to motion.

This is a universe of motion.

The cause of all motion is the dynamic action of thinking of the One universal living Being, which man calls God, or Mind, or by other names, all of which stand practically for the one idea of fatherhood, or deity.

Thinking is a process, an orderly, evolutionary, periodic process of absolute limitations.

All motion of thinking Mind is born in the maximum high speed of the universal constant of energy. It runs the gamut of periodic and opposing deceleration and acceleration in six full tones, one double tone, and a master-tone, to each of nine lowering octaves, and a variable number of mid-tones in each of the last four octaves.

The seven tones are those so-called “elements of matter” which are improperly classified in the eight groups of the commonly accepted Mendeleef periodic table. All effects of motion which cause the appearance of these elements is that which is herein termed “motion-in-opposition.”

The master-tone of each octave is the record of all motion taking place within the octave.

The master-tones are the turning points between reaction and action, just as the double tones are the turning points between action and reaction.

They are the beginnings of each new expression of energy in motion and are records of the old.

They are the ends of exhalations and the beginnings of inhalations.

The master-tone of each octave is the inheritance of the original motion of the thinking process of Mind. These master-tones are the “inert gases” which are classified in the zero group of the Mendeleef table.

The state of motion of these inert gases is that of motion-in-inertia.

Motion-in-inertia is that state of pressure equilibrium which lies between any two masses.

The inertial line, or plane, is that dividing line, or plane, toward which all masses discharge their potential.

It is the line, or plane, of lowest potential of two opposing areas of potential, where opposing pressures neutralize. This is the plane of minimum pressure of two opposing areas.

The master-tones which represent a state of motion-in-inertia and are the inert gases, bear the same relationship to the elements that white bears to the colors. They are a registration of them all. White is not included in the spectrum, it has no place there. The inert gases should not be included in the elements. They have no place there. Of this more shall be written later in its proper place.

The ten octaves constitute a cycle of evolving states of motion. This cycle includes the uttermost limitations of divine possibilities, and beyond it nothing is or can be.

The cycle begins with the highest note and descends the scale sequentially through man's unseen universe until hydrogen, the first element perceivable to man, is reached.

There is no unseen universe.

Those tones which follow hydrogen are man's visible or "physical" universe of matter and continue into the tenth octave. Here elemental integration and disintegration have ended the cycle by the attainment of the equilibrium of its beginning.

All motion is oscillatory, swinging in sequence between two apparently opposing forces, gravitation and repulsion, which are respectively electric and magnetic.

This oscillatory motion is a pulsating in-breathing and out-breathing, an inhalation and an exhalation, which is a characteristic of all matter, whether it be in units, or systems of units, or mass.

These two apparently opposite forces are the father ... mother forces of Mind, which, added together, make but the One force.

There is but one pendulum to the cosmic clock.

All the so-called “created” universe of matter is but the effect of these two apparently opposing male, female forces exerting their opposition.

All motion-in-opposition is both gravitative and repulsive. This is characteristic of all matter.

Motion, at the inertial line or plane where mass disappears, is neither gravitative nor repelative. Hence the master-tones, which register effects of motion on this line or plane, should not be included in the table of the elements.

All matter is characterized by periodic and alternating opposites of motion in sequence, each opposite being preponderant in sequence.

Each opposite force is the cause of the other.

Opposition is a characteristic appearance of all effects of motion and has no existence other than as an appearance. In inertia, this appearance always disappears.

Motion and matter must not be confounded. Matter, as man understands matter, is only an appearance due to states of motion.

The creation of form in matter is the apparent integration of those things which are and always have been.

The de-creation of form in matter is the apparent disintegration of apparently integrated things.

Creation is transmutation, or integration, of the one simple indivisible substance, into the appearance of many complex substances and things.

Creation may be likened unto the assembling of a few letters of type for the printing of a very complex idea.

De-creation may be likened unto the redistribution of type, after it has served its purpose of giving expression to idea on the printed page.

Matter is light crystallized into the complex idea of this universe, exactly as literature is type assembled into the complex ideas of a library.

Matter is the registration medium of light, just as letters are the registration medium of literature.

Matter is light gravitationally assembled into the appearance of form, and radially disassembled into the disappearance of form.

The assembling process is what man calls life.

The disassembling process is what man calls death.

—

Light exists as light always and forever.

All matter is but a variation of the state of light due to variation of dimension of the evidence of motion in the wave by which all motion is expressed.

To man, matter means the complexity of many substances and many things.

Complexity and variability belong to motion and not to substance. There is but One unchanging substance.

The appearance of change does not belong to substance but to motion.

Man lives in a universe of motion, a universe of appearances and illusions which deceive him, except for those simple, obvious illusions with which he becomes perfectly familiar.

Man will stoutly aver that matter changes and that there are many substances, but he would not dream of contending that the moon runs along the road behind the trees as he runs.

Yet one contention would be as reasonable as the other.

Matter and Mind and light and energy are eternal. They are constant. They are cause.

Form and motion are illusions. They are fleeting. They are effects.

\* \* \*

This post is quite full, so I will allow space to give it deep thought over the next two weeks. I welcome any thoughts and insights you may wish to share. Until my next post, I wish for you a very Happy Thanksgiving Day. My heartfelt thanks to you for your presence with me in this venture into new insights into the amazing Universe in which we live out our many incarnations.

Thank you!

*Anthony*

## Transmutation Demystified Part 4: At the Crossover Point

(<https://healingtones.org/2022/09/26/transmutation-demystified-part-4-at-the-crossover-point/>)

*“He that dwelleth in the secret place of the Most High  
shall abide under the shadow of the Almighty.”  
(Psalm 91)*

\* \* \*

(<https://attunementwithsacredsound.files.wordpress.com/2022/09/e1663375613772.jpg>).

**PROCEEDING TO THE FINAL** two misconceptions our featured author and science mentor, Walter Russell, rectifies in his book *A NEW CONCEPT of the UNIVERSE*, this excerpt reminds me of a quip uttered by a friend and attunement colleague: *“Nothing’s wrong. Everything matters.”* Used as a verb, if you will, the word “matters” would mean *materializes or manifests*.

The flip side of this coined quip could read *“Nothing’s wrong, everything un-matters,”* as in disintegrates, in the life/death cycle in this *“Creating Universe,”* as Russell calls it, implying that there is no beginning nor ending to God’s eternal Creation, as energy — which is what everything is — cannot be created nor uncreated or destroyed. The Universe of Light is as eternal as its Creator. Let’s hear what Dr. Russell has to say about matter. Does anything really “matter” or is it all an illusion? Hmmm.

\* \* \*

*Now you see it. Now you don't.*

## Misconception of Matter

*4. Electric matter is but a mirror which reflects qualities outside itself to simulate those qualities within itself.*

*In the Mind of any creator of any product is the IDEA of the formed body which Mind desires to produce. Also the knowledge, energy and method of production are in the Mind of the creator of that product and not in the product. The architect does not say that the energy, idea, or construction methods are in the temple of his conceiving, nor should man say that they are in the temple of God's conceiving.*

*To thus claim that energy is a property of matter is to deprive The Creator of His omnipotence and omniscience. The entire universe manifests power, but the universe is not the power which it manifests.*

*Not one particle of matter which constitutes the material body of any product can move of itself. It can move only through desire and command of the Mind of its creator extended to it electrically.*

*The powers of “attraction” and “repulsion” which science mistakenly attributes to matter are electrical effects performing their one and only function of dividing an equilibrium into two opposing conditions, which extend equally from a dividing equator. The magnetic Light controls the balance of these two opposing conditions which interchange two ways in their endeavor to void their opposing conditions, but the stresses and strains which seem to make matter attract and repel matter are electric effects.*

*Electric effects of motion can be insulated from each other — but the magnetic Light of The Creator, which causes those effects, cannot be insulated from matter by matter.*

*All matter is electric. Electricity conditions all matter under the measured control of the ONE MAGNETIC LIGHT which forever balances the TWO electrically-divided, conditioned lights of matter and space.*

*Divided matter strains to find balance in the zero of equilibrium from which it was divided. The senses of man are mightily deceived by the illusions of appearance which cause him to conclude otherwise.*

*Newton's apple was not attracted to the ground by gravitation. The high potential condition of that solid apple sought a similar high potential condition. That is to say it "fell" toward the earth to fulfill Nature's law of like seeking like.*

*Had Newton sat with the apple for a week or two he would have seen that same apple "rise" unto the heavens as a low potential gas seeking a like low potential position to balance its electrically-divided state. The "rising" of the decaying, expanding apple again fulfills Nature's law of like seeking like.*

*All polarizing bodies add to their densities and potentials. The apple which fell to the ground was a polarized body. All polarized bodies must reverse their polarities and depolarize. They then lose their densities and potentials. The depolarized apple returned to the zero of its beginning.*

*The Newtonian law is in this respect invalid because it accounts for but one half of the apple's growth-decay cycle. This is a two-way universe of opposed effects of motion — not a one-way Universe.*

## Misconception of Substance in Matter

*5. Sense of observation has led to the erroneous conclusion that there are 92 different substances of matter.*

*This universe is substance-less. It consists of motion only. Motion simulates substance by the control of its opposing wave pressures of motion which deceive the senses into seeing substance where motion alone is. The senses do not reach beyond the illusion of motion, or do those who believe that they can gain knowledge of the secrets of this vast make-believe universe even faintly comprehend the unreality of this mirage of polarized light-in-motion which they so firmly believe is real.*

*Motion is two-way, for all motion is caused by the division of an equilibrium, and its extension in two opposite directions to create the two opposite conditions of pressures necessary to make motion imperative.*

*One of these two conditions of electric motion thrusts inward toward a center to create a centripetal vortex to simulate gravity. On the*

*other side of the dividing equator, the other condition thrusts outward from a center to create a centrifugal. vortex to simulate vacuity.*

(<https://attunementwithsacredsound.files.wordpress.com/2022/09/the-mystery-of-gravitation-and-radiation.jpg>)

*Moving waves of oppositely-conditioned matter simulate substance, but there is no substance to the motion which simulates IDEA in matter. If a cobweb could move fast enough, it would simulate a solid steel disc — and it could cut through steel. If such a thing could happen it would not be the “substance” of the cobweb which cut through the steel — it would be the motion which cut it.*

*Fast-moving short waves simulate solids, while slow-moving long waves simulate the gases of space which surround solids. Waves of motion are substance-less, however. They merely simulate substance.*

*Motion itself is controlled by the Mind of the Creator Who uses it to express His desire for simulating IDEA of Mind by giving it a formed body. There is no other purpose for motion.*

*Desire in the Light of Mind for creative expression is the only energy in this universe. All motion is Mind motivated. All motion records Mind thoughts in matter.*

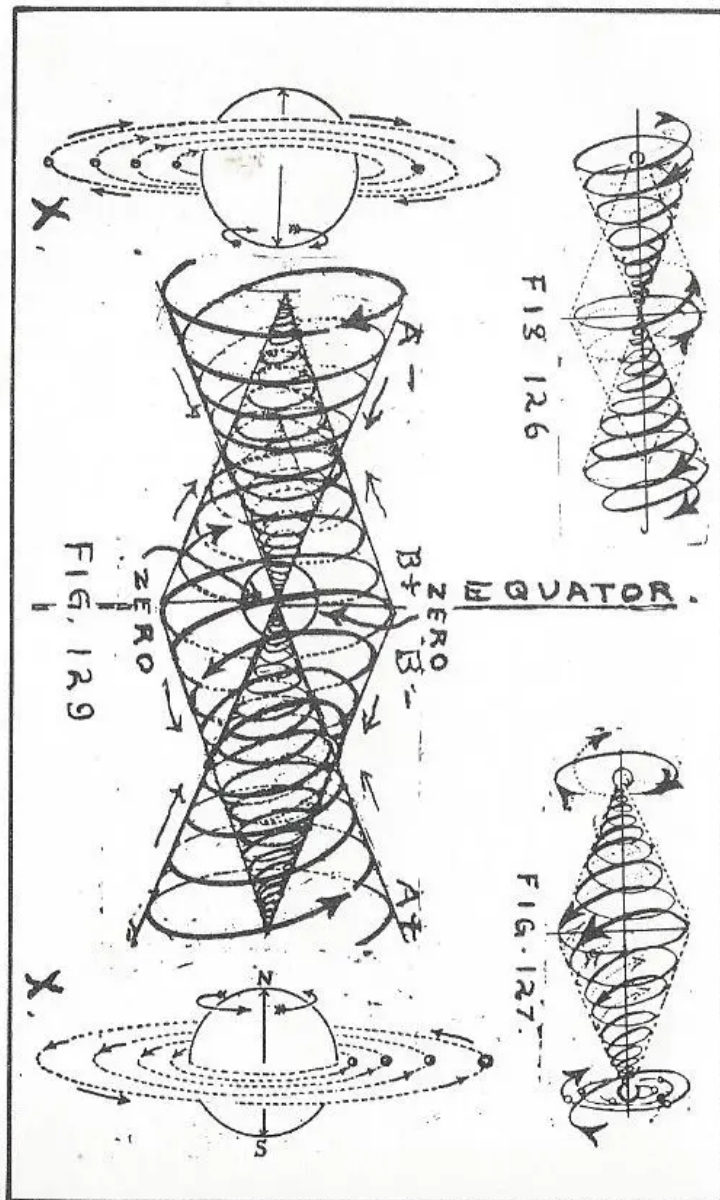

*All matter is but pressure-conditioned motion. Varying pressure conditions yield varying states of motion. Varying states of motion are what science misinterprets as the elements of matter.*

*Varying pressures in a wave are tonal. In each octave wave there are four pairs of tones, each of which has the same relative position in its octave color spectrum as it has in its octaves of chemical elements.*

*Waves are, therefore, electric pressure-conditioned octaves of tone.*

\* \* \*

(<https://attunementwithsacredsound.files.wordpress.com/2022/09/currents.jpg>).

## ELECTRICAL VORTICES OF ENEGETIC WAVES

This graphic from Russell's book demonstrates how electrical currents spin a vortex of energy, a "field" if you will, as bodies of matter are created and un-

created and returned to their origin as invisible plasma, or gas.

The crossover point is at the equator where Light abides in stillness offering control to the movement of atoms and providing a fulcrum for balancing the opposing actions of radiation and gravitation. (Another word for gravitation is *response* or *attraction*.) It's also the place of greatest pressure, as well as the point of *transmutation*.

## AS BELOW SO ABOVE

What manifests and takes shape in the *explicate* order under the heaven reflects Life's design for forms in the *implicate* order of the heaven. There is only One Law governing the Creative Process: Radiation–Response–Attraction–Union–Unified Radiation. This law governs the electric universe at all levels, including and especially at the level where Man was created to live and function at the crossover point between Heaven and Earth as co-creator with God. The substance of connection between Man and Creator is the medium through which the Tone of the Word that creates Life on Earth is propagated so as to be perceptible by Man

and re-sounded in the expression of his living. That medium is the rarified substance of *pneumaplasma* (spirit substance).

Pneumaplasma is the silvery substance comprising the plasma chord of connection between the Angel and his/her incarnating human capacity. Essentially it is *transmuted flesh* generated by the movement of the Spirit of God in expression through body, mind and heart. The flow of Spirit, of Love, enters the body by way of the heart as it is open in love response to the Spirit of God — as Handle celebrated in his MESSIAH: “*Lift up your heads, O ye gates, and be ye lifted up, ye everlasting portals, that the King of glory may come in.*” — and as the Lord of Love commanded when he gave us the First Great Commandment.

A friend and attunement colleague, Chris Jorgensen, of the International Association of Attunement Practitioners, recently penned a succinct description of the *crossover point* in a context relating to Attunement:

*The crossover point is the sacred place where the Radiation of Being is consciously known and shared. It is the point where Love is made visible. It is Assurance in divine Presence. The current vibration of the world is the Spirit of Purification, the crossover point – the energy, frequency and radiation of the Heart-Thymus. It is a singular point where Heaven and Earth meet.*

*Living in Attunement at the crossover point we find ourselves alone in our own radiation and pneumaplastism. This sacred setting is not a school, or a place to find an external leader to direct or instruct, nor is it the place of questioning. At this crossover point we know our own divine name, our sense of purpose, and the commission for the life-pattern that we have created and continually enfold in love . . . and, we know the answers to any of our questions.*

**The electric technology for the transmutation and ascension of flesh to a higher vibrational state, and for the generation of spiritualized atomic substance, is already in place. All one need do is come into the place of greatest pressure and greatest stillness at the *crossover point* of no magnitude between Heaven and Earth and look up in utter love and abandon and say — with all of one's heart and with**

all of one's mind and with all of one's strength— "I love you Lord God" — and never leave that place of stillness. Live in the place of attunement with the tone of that love response upward and the outward flow of life will continually be strong and radiant. Transmutation is natural.

As always, I welcome any thoughts you may wish to share either in the comment feature or by email. Until my next post,

Be love. Be loved

## Transmutation Demystified Part 3: Our Electric Universe of Light (<https://healingtones.org/2022/09/25/transmutation-demystified-part-3-rectifying-misconceptions-2-and-3/>)

*“When they shall know the Light of Me in them, then they shall be Me and I them.” — Russell, from THE DIVINE ILIAD*

\* \* \*

(<https://attunementwithsacredsound.files.wordpress.com/2022/09/e1663375613772.jpg>).

**SIMPLY PUT, TRANSMUTATION is about energy changing pressure and frequency to manifest new forms. Literally the verb “to transmute” means to change or alter in form, appearance or nature, especially to a higher form, by changing the pressure — as in raising the temperature to change water into steam and air — or by changing the frequency at which a substance vibrates —**

as in changing the pitch of a guitar string by changing its tensile pressure. All the notes used in a musical composition, regardless of its complexity, can be created on a single piano string simply by changing its tension, or tensile pressure.

In chemistry, all of the elements are created from a single element by a process of transmutation in which the Universal substance of Light changes its potential for power as it transmutes from one form and substance to the next. There are not *many* elements. There is only *one*. Change that one element's pressure, and its form and nature, as well as appearance, change. How amazing is that!

As Walter Russell describes elements: "The elements of matter are but varying aggregations of corpuscular light units gathered together in systems familiarly known as atoms."

One of the privileges and responsibilities we have as Human Beings made in the image and likeness of our Creator is to transmute the atomic fabric of our physical bodies into the spiritualized substance of *pneumaplastm* to enrich our connection with our Creator. That connection is by way of what has been described as a "silver cord" in Ecclesiastes: "*Or ever the silver cord be loosed, or the golden bowl be broken, or the pitcher be broken at the fountain, or the wheel broken at the cistern. Then shall the dust return to the earth as it was; and the spirit shall return unto God who gave it.*" (Eccl 12:6). It is by means of this silvery substance that the ordinances of heaven descend into the earth to make all things new. This is not simply a belief or even a theory. It is a scientific phenomenon.

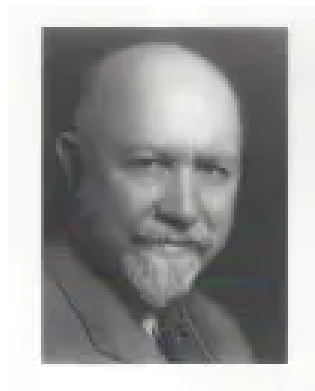

Pursuant to a deeper understanding of this transmutation process, the topic of this series, let's move along with Walter Russell in rectifying a few more scientific misconceptions about

the electric universe in which we live as we lay the foundations for understanding the alchemy of transmutation.

\* \* \*

## MISCONCEPTIONS RECTIFIED

### 2. Misconception of Electro-Magnetism

(<https://attunementwithsacredsound.files.wordpress.com/2022/09/russell-2.jpg>).

*“The Einstein theory of the constitution of matter conceives this universe to be “one great ocean of electro-magnetism, out of which – and into which – flow the streams of gravitation, matter and energy.”*

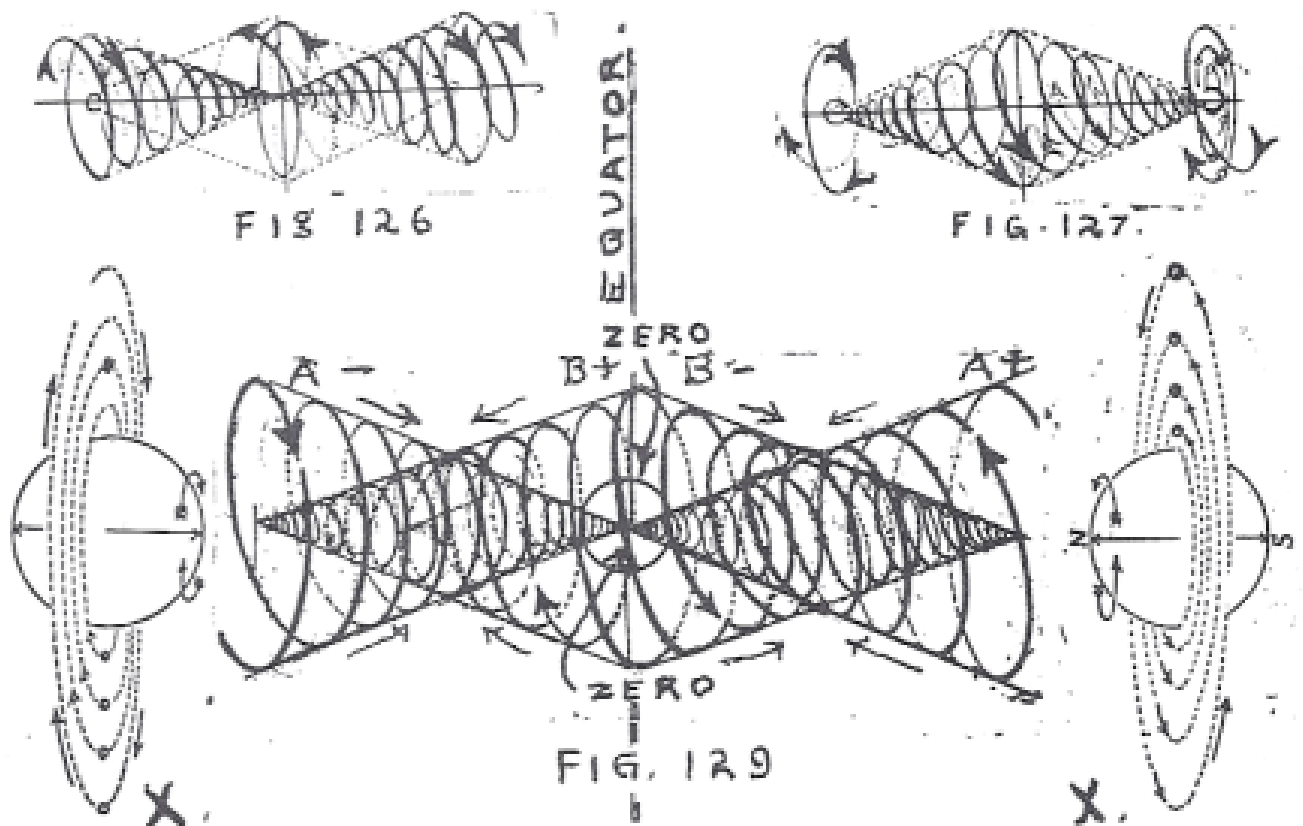

**“Radiation, the equal-and-opposite mate to gravitation, without which gravitation is impossible, is entirely ignored in this fantastic and unnatural concept.**

**“Equally fantastic is the claim of this theory that “it is impossible to have gravitation without matter,” and “for space to exist without gravity or without matter.”**

**“The weak point in this theory is the fact that electro-magnetism is not an existent force in Nature; nor are there electro-magnetic fields or magnetic fields. Wave fields are electric – exclusively electric.**

**“Electricity is the only force which God makes use of to create this universe. And the only two “tools” God makes use of for creating His universe of matter and motion are the two pairs of opposed spiral vortices. One of these opposite pairs meets at apices at wave amplitude to create spheres of matter and the other opposed pair meets at cone bases upon wave axes to void matter and motion.**

**LOOPS OF  
FORCE IN AN  
ELECTRICAL  
CURRENT ARE  
WOUND UP  
CENTRIPETALLY,  
JUST AS SOLAR  
AND STELLAR  
SYSTEMS ARE  
WOUND UP IN  
THE HEAVENS.  
CENTRIFUGAL**

**FORCE  
UNWINDS  
THEM FOR  
REWINDING  
AND  
REPETITION.**

**“These two pairs of opposed electric spiral vortices are the basic units which construct all matter. Together they form the electric waves of motion which create the various pressure conditions which are needed to produce the many seemingly different elements of visible matter.**

**“Electricity is divided into two equal-and-opposite forces which thrust away from each other to build this polarized universe.**

**“When inability to thrust away from each other takes its sequential turn in the pulse of the universal heartbeat, depolarization voids all opposition. Thus the universe consists of cycles of life followed by death – growth followed by decay, and generation followed by radiation – each expressed simultaneously and repeated sequentially forever without end.**

**“That which science calls magnetism, and believes to be a force which has the power of lifting tons of steel, is God’s still Light which balances and controls the equality of electric division, but electricity alone performs all of the work of this universe. The magnetic Light which controls the universal balance performs no work whatsoever.**

**“A bar magnet picks up nails because of the electric current which divided that steel into its activated polarized condition and not because of its focal poles of stillness which center its two**

activities. Even though the electric current has been withdrawn, the steel retains its electric activity for long periods and acts as though the current still remained.

“Magnetic Light control might be likened to the rudder of a ship which controls the direction of the ship’s motion without in any way motivating that motion.

“It might again be likened to the fulcrum which extends its power of expression through motion to the lever, without in any way acting to motivate that expressed motion of the lever.

“God’s still magnetic light is the fulcrum of this creating universe. Electricity is the two-way lever which extends from that fulcrum to give the universe its pulsing heartbeat of simulated life-death sequences.

“Wherever God’s Light appears in matter, there stillness centers motion, *but there is no motion at that point*. The center of gravity in a spherical sun or earth is one locatable point where God’s Light is. Likewise, the two still centers of north and south spiral vortices are other locatable balancing points of control. Likewise, the shaft which connects all pairs of opposed poles is an extension of stillness from the zero of wave beginnings to the zero of wave amplitude, and the return of motion to the zero of its beginnings in the stillness of its borning place on its wave axis.

“This is a universe of Light-at-rest from which two opposed lights-of-motion appear to manifest the IDEA which is eternally sealed in the light-at-rest.

### 3. Misconception of Energy

**“Failure to recognize that this universal body of moving matter has been created by some power outside of itself has led science to conclude that the energy which created matter is within itself. Even more erroneous is the conclusion that energy is a condition of matter, such as heat.**

**“This failure has led to the conclusion that Creation will disappear when heat energy “runs down.” The first and second laws of thermodynamics are built upon this obviously wrong conclusion. The universe will never “run down.” It is as eternal as God is eternal.**

**“The poem is not the poet, however, nor is the symphony its composer. In a like sense this universe is not its own Creator. Whatever qualities or attributes there are in any product — whether it be an adding machine or a universe — have been extended to that product by their creator to manifest qualities, attributes and energies which are alone in the creator of that product.**

**“Nor is the IDEA which matter manifests within matter. *IDEA is never created. Idea is a Mind quality.* Idea never leaves the omniscient Light of Mind. Idea is but simulated by matter-in-motion.**

**“*IDEA never leaves its invisible state to become matter.* Bodies which manifest IDEA are made in the image of their creator’s imaginings.**

**“Every creation, whether by God or man, is an extension of its creator. It is projected from him by a force which is within its creator and not in the projected product.**

**“All of the knowledge, energy and method of creating any product are properties of Mind alone. There is no knowledge, energy, life, truth, intelligence, substance or thought in the**

## **motion which matter is.” — From A NEW CONCEPT OF THE UNIVERSE**

\* \* \*

Throughout Russell’s writings he uses the capitalized word “MIND” as his choice of a term for God, as the Mind of God is one with God. The term “MIND” implies Divine Consciousness, which helps allay any possible concern that he is inferring mental or intellectual activity. He is not. Walter Russell was a genius whose mind was opened upward and receptive to the Truth and to the Genius of God as made manifest throughout His “Creating Universe.” He knew the real meaning of the phrase “mind over matter,” using his mind to channel his creativity. His mind was a true and faithful Light Bearer. I will share more about some of the fruits of his ingenious creativity later as I honor him in this blog series.

The second excerpt above brought up a curious thought in my mind as to what may be implied in the biblical creation story where man is created in “the image and likeness” of God. Did the Creator of heaven and earth simply project an image of Himself into the *imaginal realm* of His consciousness as a template for the creation of man? Just a thought that crossed my mind as I read the excerpt.

I write these blog posts simply because I enjoy the creative fun of writing as a vehicle for sharing my thoughts and meditations. I always hope my readers enjoy reading them. I invite you to share any thoughts you may have on the subject of this post.

In my next post I will present Russell’s final two misconception rectifications which are concerned with the nature of the substance of matter. So stay tuned. Until then,

**Be love. Be loved.**

# Transmutation Demystified, Part 2: Rectifying Misconceptions (<https://healingtones.org/2022/09/11/transmutation-demystified-part-2-rectifying-misconceptions/>)

*“Great art is simple. My universe is great art, for it is simple. Great art is balanced. My universe is consummate art, for it is balanced simplicity.”* Walter Russell, *THE DIVINE ILIAD*

\* \* \* \* \*

**TRANSMUTATION IS NO MYSTERY** — any more than the digestion of food is a mystery. Transmutation of the earth itself, though presently limited, is an ongoing process of ascension . . . one in which we human beings could well play a more conscious stewarding role. Let me elucidate.

(<https://attunementwithsacredsound.files.wordpress.com/2022/09/e1663375613772.jpg>).

There are some 14 inorganic minerals and 72 trace minerals or more being chelated (literally clawed apart from their covalent bonds) and lifted up through the roots of your garden vegetable plants, transformed and transmuted into organic vegetables that

are easily consumed, digested, ingested and absorbed into your body . . . transmuted again into flesh and bone . . . and not one of these steps can be circumvented. *Inorganic* minerals cannot be transmuted into living flesh without passing through the chelation process of the vegetable kingdom where they are disassembled and rearranged for use in animal organisms, such as our bodies. They are the building blocks of the body temple and facilitators of its chemical processes and nutrient utilization.

But that's not the final destination for these elemental building blocks, nor their last transmutation to undergo. They have yet a higher purpose to serve and a sacred role to play in this Whole Holy World.

Creation comes from God through Man and returns to God through Man. How this occurs and unfolds is the magic of transmutation, which is no longer a mystery, as "The mystery of God is finished on earth." (Rev 10:7)

Let me share with you the rest of this amazing story, a story that demystifies not only transmutation, but a story that demystifies as well the "mystery" of God and of our relationship to our Creator. This will be a fascinating series . . . albeit a bumpy ride for a structured mindset.

Before we get into the story, let's take a few posts to rectify some longstanding misconceptions in the scientific community, which will establish a foundation for our consideration of transmutation. For this I will rely on my science mentor, Walter Russell (<https://healingtones.org/2022/09/10/transmutation-demystified-part-1-walter-russells-cosmogony/>), and his illumined consort and beloved companion, Lao Russell. (*Click on his name above to visit my previous post about him*).

(<https://attunementwithsacredsound.files.wordpress.com/2022/09/of-russell-and-lao.png>)

**We are at the beginning of a glorious New Age of knowledge and awareness of our oneness with all life. May we bring into being in this twentieth century the Life Triumphant for all peoples everywhere and thus fulfill our sole purpose on earth—*which is to discover our divinity and live it*” — LAO RUSSELL**

## Misconceptions Rectified

**1. The cardinal error of science lies in shutting the Creator out of His Creation.**

**“This one basic error topples the whole structure, for out of it all of the other misconceptions of light, matter, energy, electricity, magnetism and atomic structure have grown.**

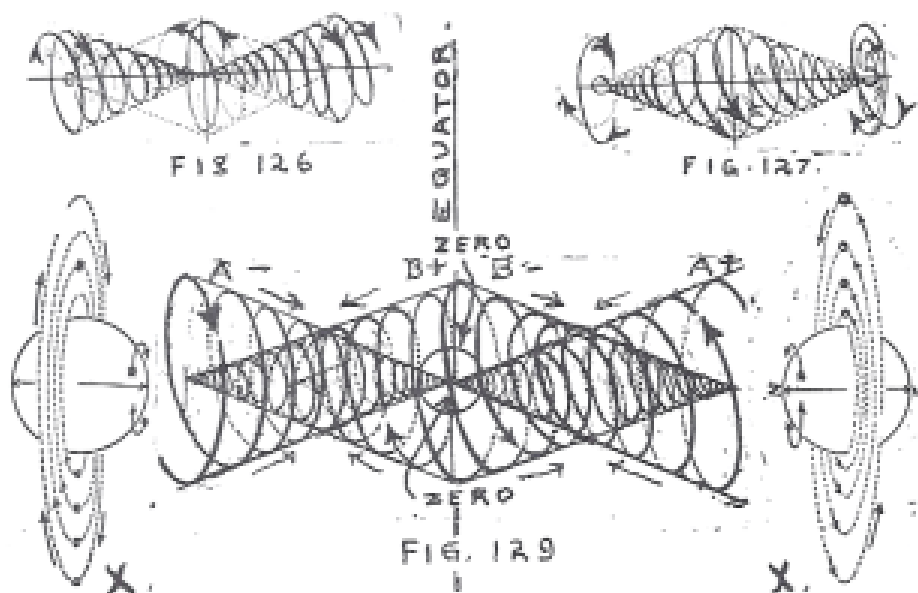

***“If science knew what LIGHT actually IS, instead of the waves and corpuscles of incandescent suns which science now thinks it is, a new civilization would arise from that one fact alone.***

**“Light is not waves which travel at 186,000 miles per second, which science says it is,— nor does light travel at all.**

**“The light of incandescent suns is but an effect of one of the two equally-opposed electric pressure conditions which interweave this universe into visible solids and liquids surrounded by invisible gases of space.**

**“These two opposite electric conditions which form the basis of the constitution of matter are the compressed condition of gravity pressure and the expanded condition of radiation pressure. These two electric conditions are the equal-and-opposite pressures which make motion imperative and without which motion is impossible.”**

*This is essential to our understanding of transmutation, as we'll see later.*

(<https://attunementwithsacredsound.files.wordpress.com/2013/02/e1663379714924.png>)

LOOPS OF  
FORCE IN AN  
ELECTRICAL  
CURRENT ARE  
WOUND UP  
CENTRIPETALLY,  
JUST AS SOLAR  
AND STELLAR

SYSTEMS ARE  
WOUND UP IN  
THE HEAVENS.  
CENTRIFUGAL  
FORCE  
UNWINDS  
THEM FOR  
REWINDING  
AND  
REPETITION

***“The positive electric condition compresses large volumes of light-waves into small volumes by winding them up centripetally into spiral vortices by thrusting inward from without. That is what gravitation is.***

***“The negative electric condition expands small volumes of light-waves into larger volumes by unwinding them centrifugally into voiding equators where matter disappears. This is what radiation is. Radiation thrusts outwardly from within to depolarize matter and void motion.***

***“The light of suns and the dark of space are but two opposite conditions of the same thing. They interchange constantly. Each becomes the other sequentially.***

***“Science excluded God in its considerations because of the supposition that God could not be proven to exist by laboratory methods.***

***“This decision is unfortunate for God IS provable by laboratory methods. The locatable motionless Light which man mistakenly calls magnetism is the invisible, but familiar, Light which God IS — and with it He controls His universe — as we shall see.” — Walter Russess, A New Concept Of The Universe***

The disappearance of matter is precisely when the final process of transmutation of flesh to a higher order of Light takes place, as we shall see . . . *and* it need not all fall back into the soil which gave it rise.

I welcome any thoughts you may wish to share. Next weekend I will post the second misconception of science relating to “electromagnetism.” Walter Russell proposes and demonstrates how and why there is no such force in Nature. Until then,

Be love. Be loved

## Evolution: From Consonance to Dissonance to Consonance (<https://healingtones.org/2020/06/07/evolution-from-consonance-to-dissonance-to-consonance/>)

*“This is a time when we either meet the moment or miss the moment.”* —Eric Garcetti, Mayor of Los Angeles.

It's a challenge to remain relevant these days as the NOW generation leaves us older folks behind—and my thoughts turn to lofty considerations that seemingly have little if any relevance to current events in the world—philosophical and existential considerations like

*“Where do we come from and where are we going?”* Often while writing a blog article I wonder if anyone really cares about the topic. *“Who cares about our origin or our destination? All I care about is where my next job will come from*

*and paying the rent next month?”* That’s understandable . . . for those who have their noses up against the grinding stone. There is, however, a larger picture to be seen in which these challenging times can be understood and seen for why they are the way they are and what we can do in moving forward, if we would only look up from the grinding stone. This post offers such a perspective—but it will require you to *think*.

Before I launch into this post, I wish to share words and a poem from my favorite bard, Don Hynes, sent in response to my [previous post: \(https://healingtones.org/2020/05/30/the-garden-of-consciousness-as-above-so-below/\)](https://healingtones.org/2020/05/30/the-garden-of-consciousness-as-above-so-below/)

Thank you for this wonderful perspective brother. You asked for our thoughts. Here are a few of mine:

The New Heaven

The old heaven and earth  
are passing away  
before our very eyes.

Anger and opinion of little use  
as the ground slips beneath our feet  
and the wide sea opens.

The words written long ago  
about horsemen riding  
and a great city falling  
are now in present tense.

Hold together what you wish  
of the crumbling structures  
but be sure to look ahead,  
to begin the work  
of the new heaven.

Don’t scar it with old hatreds,  
with all that hasn’t worked.

Remember to forget

and follow the trail  
that life is leading.  
Keep peace amidst the turmoil  
and your crown in the chaos.  
New life is coming  
and into that new body  
we are all being born.  
*Thank you, Don*

## *ORIGIN*

I just finished reading Dan Brown's *ORIGIN* and I'm dwelling on the chapter where he finally arrives at the anxiously anticipated moment when the pivotal character in the story, futurist and computer entrepreneur Edmund Kirsch, reveals his belief-shattering discovery of the origin of life, along with the origin and destination of the human species, as the age of Artificial Intelligence dawns. I won't spill the beans for those who haven't yet read the book. But I will take a phrase from the chapter to launch a consideration along the lines of the evolution of human consciousness, incorporating also words of my spiritual mentor from back in the day of my conscious awakening. The phrase is

*“DISSIPATION-DRIVEN ADAPTIVE ORGANIZATION”*

Lifted from the book, this phrase takes me back to my journey through Walter Russell (<https://wp.me/pQ3IV-xI>)'s signature work THE UNIVERSAL ONE (<https://wp.me/pQ3IV-1hN>), in which he portrays and demonstrates the “Creating Process” as one of simultaneous integration and disintegration facilitated by the dance between the equally empowered Masculine and Feminine energies, partners in creation. When you have a few minutes, it's revolutionary reading. Just click on the above links to previous posts.

Back to *ORIGIN*: Edmund Kirsch's scientific "discovery" of the origin of life in Brown's novel is based on the urge and compulsion of life-giving energy to move out and bring the light of life to all corners of the Universe. Ergo, the "Big Bang" theory. To accomplish this, the "Laws of the Universe" assemble atoms and molecules into forms that will "dissipate" the energy in order to spread it further out into the formless void of the cosmos. In the process, forms are disintegrated and dissolved, making room for new forms to emerge, all for the purpose of distributing energy throughout the Universe. In order to accomplish its drive to spread energy around, the *thermodynamic* law of the universe creates a state of *entropy* by destabilizing a system of accumulated energy so that the energy can be dissipated.

"ENTROPY: A thermodynamic measure of the amount of energy unavailable for useful work in a system undergoing change."  
(New World Dictionary)

Many systems on the planet are undergoing change. Examples of *entropy* can be seen in weather patterns where hurricanes and tornadoes form to dissipate the built-up warm energy in the tropics then move out and spread the energy into cooler climates, which absorb the energy and dissolve the entropic system. The same dynamic is at work in the cooling of a cup of hot tea where the heat is dissipated in the tea and absorbed by the cup.

In the larger picture of human relations, entropy is at work in the clash between two classes of people, such as we see in the suppressed prejudicial racial issues in America that have bubbled over into "peaceful" demonstrations against unjust treatment of "people of color" by a policing system purposed to protect them. Eventually the energy builds up to the point of *destabilizing* the emotional and mental capacities of the

demonstrators which results in violent, and often destructive, outburst of energy. As the energy is spent, the demonstrations disintegrate.

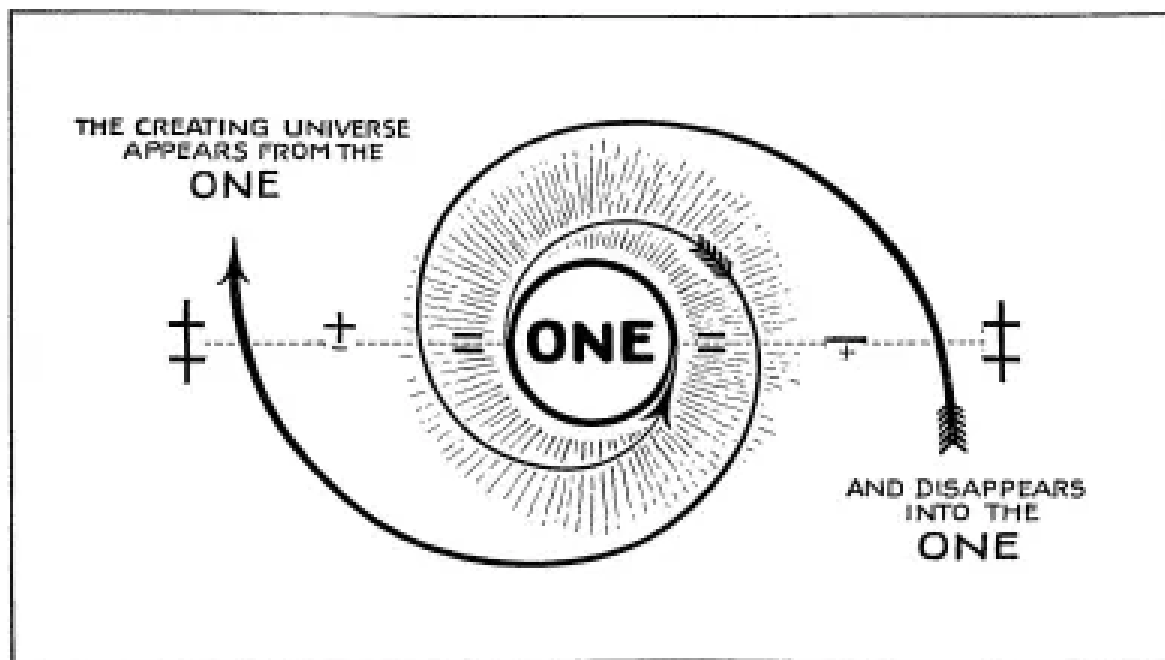

Considering Don's poem "New Heaven," entropy is working in the *transference of energy* from the disintegrating old heaven and old earth to the New Heaven and New Earth in a process of transmutation. The acceleration of transference is exponential as the new absorbs the dissipating energy and substance of the old, which appears to be going out with a bang. To try and stop it is literally a waste of precious energy needed to empower the New Heaven and grow the New Earth. Fighting and resisting it only feeds it and hastens its collapse. The word of Life is "Come out of her my people."

New life is coming  
and into that new body  
we are all being born.

### *The Old God is Dying*

Along with the passing of the old heaven, the old God of religion is dying. In Brown's novel, Edmund Kirsch's theory is supposed to preclude the need for God in the creating universe—that is, the God of religion made in the image and likeness of man. Science with its Laws of the Universe—quantum physics, chemistry, microbiology, gravity, etc—under the dominion of Artificial Intelligence, had become the new God to replace the old. The obvious question, posed by Michael Langdon, an academic scientist himself, is "*Who created the Laws of the Universe?*" He suggests that there has to be an Intelligence behind the Universe wherein energy and mass oscillate between chaos and order.

I propose a more realistic formula: **LIFE-DRIVEN ADAPTIVE ORGANIZATION FOR THE ONGOING EXPRESSION OF CREATING LIFE ENERGY**, in keeping with Walter Russell's model, as portrayed in this graphic:

All created forms come from and return to their Origin. The forms for moving life's creating energy dissolve in the dissipation of energy. Life's creating energy itself does *not* dissipate, except in the form, resulting in the dissolution of the form.

However, we've been considering the *transformation* and *transmutation* of consciousness, along with the physical body, and not their dissolution—although that *is* what's happening in the fallen state into which we've incarnated as spiritual beings, *angels* if you will. The warning by the Creator in the Beginning was and is "thou shalt surely die" if we continue to live our lives on the basis of our self-active mind's *judgments* as to what it thinks is "good" and what is "evil."

**ASCENSION TAKES PRESSURE**

There is another way our *physical* forms may go, and that's *up* into the Light rather than down into the dust. That would require *pressure*. That pressure is available within our living organism wherein spirit and flesh mingle to create a "Human Being." Life's energy, allowed to *build* rather than dissipate, would lift human consciousness to a new and higher level and shift the frequency of our physical forms to a higher vibration, where they would be completely impervious to all disease.

## *FROM CONSONANCE TO DISSONANCE TO CONSONANCE*

So, how does all this play out in the evolution of *my* consciousness? It plays out in how I conceptualize sensory perceptions in my consciousness and then neatly file them away into "good" and "bad" categories. To help demonstrate, allow me to refer to my musical expertise.

Music is generally a movement of sound-driven energy that alternates back and forth between dissonance and consonance. There's nothing "wrong" with dissonance in the musical composition as it is part of the movement of the music, which usually resolves into consonance. By the same token, there's nothing more "right" about consonance. One is simply the *evolving* or *resolving* phase of the other. Now, we all love consonance, harmonious sounds of symphony. It pleases us more, however, when consonance resolves out of dissonance. Now, if we don't like the dissonance and attempt to resolve it without any musical knowledge, we would likely create a noisome cacophony. Listen to this recording of Sergej Rachmaninov's *Vespers (All-Night Vigil)* and experience what I'm talking about.

*(Move the red dot in the tracking bar to 23:50, and listen with your earphones at a moderate volume, as it will get louder at 25:00, then very quiet at 25:27. So, keep your finger on the volume control.)*

## *RESOLVING DISSONANCE*

**I would now like to share some poignant words and profound insights of my spiritual mentor, Martin Exeter. He spoke these words some forty years ago. However, as you will see, they are quite applicable to the present state of turbulence in our world. (Read these excerpts when you have the time to be quiet and still.)**

*The state of affairs in the world might be described as an immense dissonance of raucous sound. How is this dissonance going to come to a point of consonance, harmonious consonance? How is it going to be resolved? The creative process in operation throughout the whole universe moves in cycles, in the overall sense in a creative spiral. It is an upward movement with which human beings are not particularly familiar because they have not for a long time been participating in it, but it is going on nevertheless. It moves in this spiral from a point of consonance into a state of dissonance and back to a state of consonance again at a higher level. This is the natural creative cycle; there is nothing wrong with it. In its relationship to human beings it was described long ago as the tree of the knowledge of good and evil. Good and evil then were part of that original state—both are perfect. There is consonance and there is dissonance and they each have a part to play in the creative process. There is nothing wrong with the dissonance; there is nothing wrong with the consonance. There is nothing wrong with evil, there is nothing wrong with good, until human beings interfere with the process. Then things go very wrong in human experience, not that this interrupts the creative cycles of the universe particularly but it brings a good deal of tribulation and suffering upon the human race and upon many other forms of life which are part of the creative life cycle related to this earth.*

*So there has been a mess-up in this whole process because of the failure of human beings, so that they are now disassociated from the creative cycle. We could say, to illustrate something, that at the point of human failure there was a state of consonance. The state of consonance was properly to be followed by a state of dissonance in the true creative cycle, but certain ones distorted the state of dissonance in order to conform with their desires, desires which they presumed were good or would lead to more satisfying consonance.*

*Unfortunately this was none of the business of human beings; they had no business interfering with what was happening. They were warned of what would occur if they insisted on this interference, and of course it did, because they did. And so since that point of consonance there has been a constantly increasing dissonance; the cycle has never been resolved. It may be seen that there were a number of points of hesitation in the dissonant pattern when it could have turned again into a cycle which would have led to consonance, but in each case human failure reoccurred and so the dissonance, or the disintegration in this case, continued.*

*Now if consonance is to come out of dissonance there must be present in the dissonance a starting point, a starting point which relates to the consonance that is later to appear as the dissonance is resolved. That starting point, in our present consideration of what is necessary on earth to emerge out of this unnatural cycle, is the presence of angels in human form on earth . . . . This vast dissonance that is present on earth in the experience of all human beings can only be resolved on the basis of this starting point which I have mentioned, because this starting point is a point of consonance within the dissonance. As there is that point of consonance within the dissonance the positive quality of that point begins to draw into association with itself all the material that is necessary to permit a resolution to bring the whole unfolding cycle to the point of consonance which we have referred to as the point of restoration. . . .*

*What the angels are to do has been described in various ways but maybe we should look at it in the sense of our immediate fields of responsibility, because if we have been sent on earth as angels and we land up here, wherever here may be for the individual, that is the place we have been sent to; otherwise we wouldn't be here. This is the place which makes possible the*

*resolution from the worldly state of dissonance to a state of consonance. So there is something very special about the particular place where a person is now. There is a place where we always are. It relates to the present moment, doesn't it? It always relates to the present circumstance and it will include other people who are in the vicinity, who are a part of our present circumstance—this is always so. . . .*

**Later in his message, Martin Exeter offered something more.**

*The changes that need to come are changes in consciousness. Did you ever try to change someone else's consciousness? If I had been trying to do this over these years I would have been discouraged long ago. I have been offering services over a lengthy period of time, not to change anyone's state of consciousness, because I can't do that, but to offer the opportunity to those who would receive it to remember how to let their own consciousness change. And I have been very happy over the years in doing this to discover that my own consciousness changed.*

**That's how it has worked for me. I'll close with these words of Martin's:**

*Now you can't as a human being change your own consciousness. You wouldn't know how to do it or what your consciousness should be after you had gotten it done. So that's not the point. The point is that we have begun to discover and experience a new state of consciousness to the extent that we have been willing to accept a new quality of expression, not struggling to build some model state of spiritual consciousness that we had decided would be useful but in a very practical way letting our circumstances be used to provide us with the opportunity of giving expression to a quality of living that transcended what we knew before. We had to take responsibility for ourselves to do this, to recognize that whatever it was that was present with us exactly where we were was the facility by which we might let our state of consciousness change.*

**"Be Where You Are."** As always, I welcome your thoughts and comments. Until my next post,

**Be love. Be loved.**

## The Pituitary's Partnership Role in the Creative Process

(<https://healingtones.org/2019/08/31/the-pituitarys-partnership-role-in-the-creative-process/>)

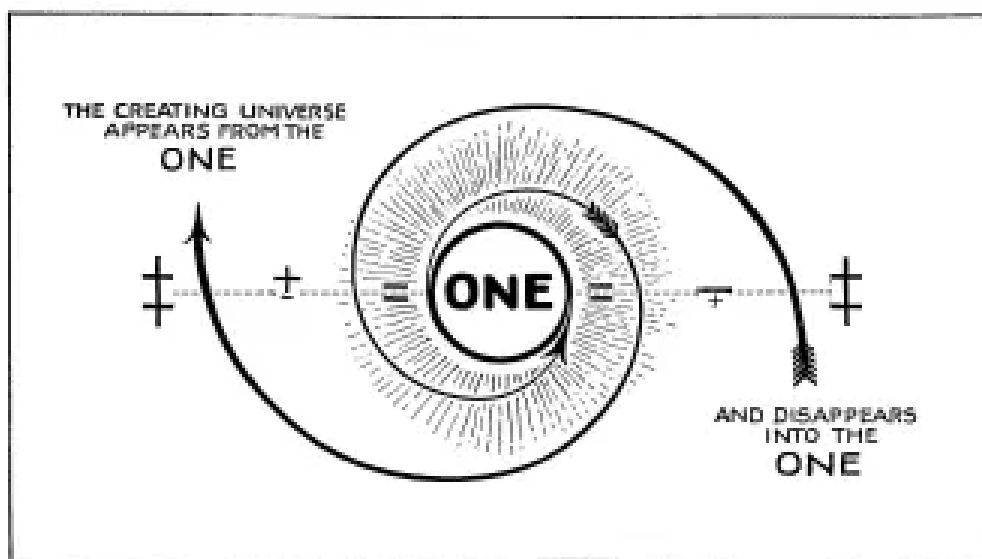

*When you make the two into one. . .and thus make the male and the female the same, so that the male isn't male and the female isn't female. . .then you will enter the Kingdom. — (Jesus, The Gospel of Thomas)*

We have created a world of competing opposites within a Unified Field of Universal Oneness. Little wonder our way of life isn't working toward the good of all, including the planet. We have isolated ourselves from God and from one another with our religions, our social classes and our political camps. We treat the wilderness as a separate world to conquer and our natural habitat as a resource to be ravaged and raped to support our consumptive lifestyle.

Even in my writings, I separate things that are inseparable. For example, masculine *and* feminine, men *and* women, God *and* Man, Creator *and* creation. In the Unified Field of Universal

**Oneness, men and women are united in Man. Creator and creation are united in God. As Walter Russell went to extreme pains to demonstrate throughout his life and his exhaustive writings, there is only God. God is all there is in his “Creating Universe,” as his graphic here portrays.**

**Contained in this graphic is the inhaling and exhaling of creative masculine/feminine energy, radiation/response, positive/negative, God/Creation. As the song goes, “You can’t have one without the other.” Only there is no “other,” just the One.**

**Thus, today we have men being more feminine and women being more masculine. We know innately that we belong together. That we are One Man with equal masculine and feminine functions — as our Pituitary gland reminds us by its physical anatomy and functional physiology. One lobe doesn’t lord it over the other. They work together as one gland toward the good of the whole body, each lobe playing its unique role and not trying to be like, or better than, the other. There is no competition between our body parts. Only cooperation and co-creation.**

**I will continue now with this series on The Spiritual Significance of the Pituitary gland.**

# THE CREATIVE PROCESS

*Another name for God is the Creative Process, a process by which the things of God in the invisible realm of spirit are conceived, nurtured and given birth in the visible realm of form. That process moves through five stages: positive radiation of the creative power of love (the masculine), negative response and openness of the womb toward the flow of radiation (the feminine), attraction and movement toward the Source of the radiation (romance), inexorable union with Source (intimacy) and, finally, release of the positive, unified radiation of the creative power of love through the forms so drawn together (radiant release of the seed, both vibrational and genetic, for the next and ongoing creative cycle.*

*This process clearly plays itself out in our body temples in the interaction between the endocrine glands. Love radiates continually through the Pineal. The radiation of Love engenders response in the Pituitary, which begins immediately to differentiate the positive current of Love and send it forth into the body by way of stimulating hormone precursors which initiate hormonal activities in the other five endocrine glands; first in the Thyroid which immediately transforms it into life for the body cells. The response of these hormonal crystals to the currents of love enlighten them as they absorb the currents and send forth their differentiated light emanations into the body tissues.*

*Thus is a pattern of attraction established throughout the body cells as the atoms and molecules forming them, caught up in the ascending current of love response, are drawn into union with love and with one another. The result is a vibrant human being expressing a Unified Field of radiation toward which elements from the natural world in turn begin to give their response in support and renewal of the body temple. It is truly a magical and magnificent symphonic movement orchestrated by the Creative Process.*

*This process also describes what is sometimes referred to as the “sex principle,” a principle which I believe underlies the deeply suppressed longing in human beings for the erotic in human sexuality: the passionate embrace of the Beloved in the ritual space of sacred sex. The branches, bowls, knobs and flowers, along with the other six candle holders, depicted here are coming out of the One standing in the midst with “his shaft,” his one golden candlestick, in the fourth plane of being. It all came out of “him.” It was all fashioned as one piece of hammered gold. . . .*

### *The Womb of All Life*

*Cyanogen-blue is the sixth color of the rainbow and, therefore, the wavelength of light that I have assigned to the Pituitary. It correlates with the musical pitch E flat. Vitamin E with manganese and other trace minerals support this master gland nutritionally. The Spirit of Truth nourishes it vibrationally.*

*These are also the pitch and color tone of our planet Earth, as we noted earlier. What the Pituitary provides for the temple of the physical body, which is composed largely of water, the Earth provides for the Cathedral of our solar system. Our Home among the stars is the womb of life for our solar system, which I prefer calling a “Solar Entity” because of its role embodying the Great Spirit Creator. Ours is a water planet and water is the universal symbol for truth, the mother of all life. It is in the womb where the Spirit of Truth works her wonders in developing the embryonic form in the warm, wet darkness of amniotic fluid, bringing forth her perfect design and firm control with great ease and wisdom. . . . Passion for the truth of love and of life nurtures an innate sensing in us for what is fitting in*

*each moment as we seek ways to fit and blend our unique individual part with the parts of others around us without pushing or imposing.*

## *The Gift of Wisdom*

*Wisdom, the gift of the Spirit of the Womb, has been aptly defined as “the sense of the fitness of things.” It causes us to pause before we speak and act, to consider how what we bring and express may impact those close to us and in the larger whole. Timing is of the essence as well. Wisdom engenders in us a deep sense of caring for what life brings to us in each moment for blessing, and a genuine sense of respect for what others are bringing and handling in themselves. It compels us, as well as enables us, to look and see the essences back of all things and to perceive them vibrationally even before they manifest so as not to be overwhelmed or taken by surprise.*

*Herein lies the essences of the Master’s instruction, “But seek ye first the kingdom of God and his righteousness and all these things will be added unto you.” All things in the natural world, our bodies included, emerge from out of the Creative Process operative within what was referred to by the Master as the “Kingdom of Heaven,” which is within us and all around us.*

*This passage has been interpreted to mean that we should go about doing what is required in order to “go to heaven” when we die. What I hear being said here is that as I look first to the Father within me for my needs, and then make right use of the things that come to me from God out of heaven, everything will be provided for me to live life in this sphere of creation.*

*This is not based on some kind of reward system but rather on the fact that all things emerge from out of the heaven, where the Creative Process works to create the patterns of new forms to*

*clothe the Spirit of Life in all of its colorful diversity. As co-creators we each have a part to play in birthing and caring for these new forms. The Spirit of the Womb is the wise Mother of Life who knows how things fit together so as to create a whole body that glorifies God and manifests the wonders of his love.*

*We use the masculine gender when we refer to God, even though the Creative Process is both masculine and feminine. In the Aramaic language, for example, the tongue Jesus spoke with the common folk of his day, the word for kingdom (malkutak) is feminine and more accurately translates as “queendom” rather than “kingdom.” In the Lord’s Prayer, the phrase in the Aramaic, “tete malkutak” actually commands “Let thy queendom come now!” Let the Spirit of the Womb, the Mother of Creation, or Mother God, come and provide a womb and all the material and processes of gestation and growth needed for this new creation. Even the Aramaic for “Our Father,” at the beginning of this ancient prayer, “Abwun,” translates, at best, as “O Father and Mother of all life,” or “O Breathing Life,” as scholar Neil Douglas-Klotz translates it in his tape series, *Original Prayer*.*

*This dual partnership is clearly portrayed in the anatomy and physiology of the Pituitary Gland itself, as previously noted, where two lobes provide both masculine and feminine functions for the Creative Process to bring forth life in the body temple.*

*Farther out in the world body we see this co-creative mechanism in place, to some extent anyway, between men and women working together to bring forth life on this planet. The masculine and the feminine aspects of God are reflected in the body of Mankind. Here is the means by which the “kingdom of heaven” is made manifest on earth, and the “will of God” is done by the Father within, through the collective body. How we*

*behave toward one another in relation to our shared role as co-creators and toward the things that emerge from God out of heaven by means of the Creative Process, is important to all of life on Earth. And the word righteousness is the key ingredient here, right-use-ness of things. "Waste not, want not," as my mother-in-law, rest her soul, used to say.*

*Herein, as I have already suggested, may well be found a deeper meaning in the text of Moses' seventh commandment, which instructed us to "Honor thy father and thy mother, that thy days may be long upon the land which the LORD thy God giveth thee." Honor our Father who is Love and our Mother who is Truth, the means by which Life makes flesh and is born on Earth. We would do well to honor the womb of life instead of raping the Earth and exploiting the feminine aspect of our being. We do fit together as complements in a body of diversity. We discover this only as we love one another and embrace our differences. Spiritual governance reveals itself naturally in a community that is founded upon a culture of love. — (from SACRED ANATOMY)*

**I will wind this series up with my next post. Until then,**

## **Rise of the Masculine In Men and Women (<https://healingtones.org/2018/12/01/rise-of-the-masculine/>)**

Taken 12/01/2012

For the past several decades, we have been experiencing the “Rise of the Feminine.” This resurgence of feminine energy in virtually all sectors of society — including the political sector, which has traditionally been dominated by men in both the congressional and the executive branches — is being met with much welcome and celebration by both women and men. The infusion of

estrogen into the bloodstream of the body politic has been a refreshing and nurturing reprieve from the testosterone-laden climate in Washington and elsewhere. Let's face it, guys, the aggressive corporate male of our species has taken us down the industrial path to an existential crisis, according to climatologists — not that the shadow side of women's wiles haven't played their alluring part. Both genders have let our shadow sides take the lead in human endeavors to achieve what we each want out of life. Notwithstanding all of the competitive strife, we are encouraged, I believe, by the rising of the female of our species to help bring about a balance, and hopefully a change in our suicidal course toward extinction. The Masculine is rising alongside the Feminine.

I take note of the fact that in virtually all situations where women are speaking out and taking on leadership roles, there are men present in the mix supporting them — which may well be being prompted by the rise of feminine energy is men, as we men are “getting in touch,” as we say, with own own femininity. So, I thought it timely, in the wake of my recent series on masculine-feminine energy, to acknowledge the Rise of the Masculine prior to and alongside the Rise of the Feminine, and perhaps see it in a new light. It could well be that women are also experiencing the rise of their own Masculine energy while men are experiencing the rise of their Feminine energy. Whatever the scenario, something of a balancing of these two energetic creative forces is trying to take place in the Human species.

## MASCULINE AND FEMININE Vs MALE AND FEMALE

In these articles I have been capitalizing the words “Masculine” and “Feminine,” but not the words “male” and “female,” for the purpose of differentiating between *energy* and *gender*, a distinction I made in my last post.

(<https://healingtones.org/2018/11/17/masculine-feminine-energy->

part-iv-energy-must-flow/) For me, the words “Masculine” and “Feminine” represent the Divine creating *energy* of the Universal One Walter Russell writes about, which is shared in a co-creative partnership with Man, who was created both male and female. The words “male” and “female” represent the specific *genders* of our species, distinguished by our anatomical, chemical (hormonal), physical and psychological makeup.

While I celebrate the men who have risen up with the women in support of their movement underway — a movement that is boldly ignoring the domineering male ego while giving women back their power and voice to speak and be heard and assume their rightful place in the forefront of human endeavors as equal partners in co-creation with men — I am also cognizant of the energetic factors at play *behind the scene*, so-to-speak, in the spiritual or vibrational levels of our Being, as well as in the larger galactic context. There is something much larger and grander afoot in the overall scheme of things than the rather miniscule “battle of the sexes” that’s been being waged for all too many centuries now. It’s time we took a break from our competitive warring and put a listening ear to the shifting frequency of the harmonic Tone sounding in our galactic home among the stars.

We’re not just being invited to harmonize with this Tone, which is sounding the vibrational frequency of Love. We are being compelled to do so or perish. What we have created on Earth, and the way we have been behaving toward one another and toward our planet, can no longer be sustained by the Tone of Love — and the Tone of Love is what creates and sustains the Natural World, the Earth and our entire Universe. Love has accommodated us thus far in our evolution from out of the cave world into which we tumbled in our fall from grace, but it is moving on in the larger cycles of planetary evolution and transformation, and we need to hurry and finish growing up in order to move on with it

— and not as passive passengers but as active stewards of the evolution of our species and of our planet. And, yes, that is a mouth full.

So, a timely and compelling resurgence of both Masculine and Feminine energy is afoot, and it has nothing to do with women's and men's so-called "rights." It's much larger than that. It's about the creation of a new world that is in harmony with the Tone of the Universal One and the Natural World itself.

## THE RISE OF THE FEMININE IN MEN

The "Rise of the Feminine" is not so much or merely a women's movement as it is a natural and timely movement of the Divine Feminine energy through the body of Mankind. In other words, the rise of the Divine Feminine is taking place in both genders of our species, in women and men alike, and it is doing so simultaneously with and in response to the rise of the creating force of the Divine Masculine.

It wasn't too many years ago that we saw the "Men's Movement" sweep through our species here in America and elsewhere. These two movements are taking place in both men *and* women, and they're doing so at a time when the "New Earth" project is emerging from out of the "New Heaven" — something that men and women throughout the world have been welcoming into their consciousness yea these many, many years since the dawning of the "Age of Aquarius."

If you've read my [previous two posts](https://healingtones.org/2018/11/17/masculine-feminine-energy-part-iv-energy-must-flow/) (<https://healingtones.org/2018/11/17/masculine-feminine-energy-part-iv-energy-must-flow/>) — and if you haven't then I would encourage you to do so — you will recall how Walter Russell describes the Masculine force of energy as the attractive, magnetic, contracting and integrating force of the Universe

moving centripetally (inward) toward the apex of a spiraling vortex. The Feminine force he describes as the radiant, expelling and disintegrative force moving centrifugally (outward) from the apex of the same spiraling vortex of energy. The Masculine *builds* up form while the Feminine *dismantles* form in a creative destructive process of clearing the deck, so-to-speak, for the creation of the next new form — only one of her more nurturing roles. This creative process is ongoing eternally at both the level of consciousness (cause) and the level of form (effect). Mental constructs and outdated concepts and belief systems are discarded in this way.

We are experiencing such a discard now, along with a radical revision and transformation of our consciousness that is allowing us to invision new possibilities for life on Earth. To refer back to a Biblical prophecy, the “old heaven” and the “old earth” are passing away in our time, making room for a “New Heaven” and the “New Earth” to manifest. The image of the “New Jerusalem,” if you will, has descended down from God out of Heaven into the consciousness of enough human beings on earth to begin transforming our collective consciousness. We see it and feel it as a real possibility.

It's time for us to go to work now as equal partners in letting a New Earth and a New World be born — a vision and dream that was held by one of our own generation, the late Scott Peck, beloved author of “The Road Less Traveled” and “A World Waiting To Be Born” — whom I celebrate with profound gratitude. The dream has been dreamt. The image is firmly planted in our consciousness, as Simon and Garfunkel sang out some years back when the cancerous “Silence” was being disturbed and broken and we began to speak our truth in poems, songs, books, blogs and demonstrations.

My wife Bonnie and I recently saw the movie *Bohemian Rhapsody* about the British rock band Queen and their amazing lead singer, Freddie Mercury, played by Remi Malek in an outstanding performance worthy of an Oscar. I don't know if some of the film footage was of Queen's actual concert at Knebworth in 1986 or not, the last time the four original members of Queen performed on stage together and when they sang that powerful mantra "We Are The Champions" with the crowd. Over a million people attended that Queen tour, one of the largest ever, which was part of a global "Aids Benefit" for the famine in Ethiopia involving several bands in various locations. But the sight and sound of so many young people our age all gathered in one place and in one accord was heart stopping. A shift took place in the way I have been viewing rock concerts, which are not my "cup of tea." I prefer good jazz and the classics.

Such gatherings have been taking place at concerts all over the world for several decades, and I now see how their "rock" sounds have been instrumental in shattering the silence of the youthful masses, along with the stigmas attached to AIDS and homosexuality, among other fixations in the collective consciousness. They have literally rocked the foundations of our culture and disrupted the status quo. It is perhaps telling how Freddie and several others in his circle of male friends became confused about their own sexual orientation, feeling the emergence of their femininity, which I felt was given rise by the music they were writing and singing.

But what I also see in all of this is the Feminine force at work clearing out the old to make room for the new. I see a phenomenon that speaks loudly and clearly that we very much want a new world on the face of our planetary home — and even more obvious, that we have the energy and the power in our hearts to create it — and God knows we have the technology.

## THE RISE OF SPIRIT

What we are witnessing and experiencing in our time is the rise of Spirit from within the heart of Humanity — which is the Heart of God incarnate on this planet. It is Love that is drawing us to each other and gathering us in concerts and demonstrations — and also in relationships. Let there be no wavering or doubt that Love is in charge and moving us all into position to do our part each one in revisioning and transforming the consciousness of Humanity by bringing our individual spirits and gifts into the process of creating the New Earth. We simply need to let love command — an unconditional love that “keeps no record of wrong,” as novelist Ted Bekker describes love in his book *The Rise of the Mystics*, which I just finished reading, I am finding this kind of love a challenge to have consistently in my heart — and it is the heart that keeps record of wrong. “Let it go” the song in *Frozen* sings out. “Let it go!” I tell my heart.

This morning my wife asked me what I thought these recent blogs are all about, and, more pointedly, what I have learned in writing them. We were having one of those heart-rending moments couples have when love is asking for more and deeper change yet. Perhaps, after some personal reflection and introspection, that could be the content of my next blog — and why not? I have indeed learned much, about myself and about my partner. I have also learned something about human behavior and the greater potential of success and harmony available to us as co-creators on this beautiful planet Earth, pregnant with life yet to be born, nurtured and stewarded by men and women in partnership with one another in Love’s embrace.

I sincerely thank you for sharing my thoughts and views . . . and I would love sharing yours. So, email me at [tpal70@gmail.com](mailto:tpal70@gmail.com). Until my next post,

**Be love. Be loved,**

**Masculine-Feminine Energy, part IV:  
Energy Must Flow  
(<https://healingtones.org/2018/11/17/masc>**

# feminine-energy-part-iv-energy-must-flow/)

As with a lot of my writings, this post is as much for my own conscious evolution and spiritual transformation as it is for my readers'. If you benefit from them as well, then I am thankful. This is heady stuff, I will admit. However, we do have minds – although Walter Russell says there is only one Mind we all share – and there are many

errors and incomplete truths we hold as sacred in these minds. We are wise to open them up and have another look at things we have been told by those who have gone before. Even the Teacher Jesus said that he had many things to share with his disciples, but they could not “bear” them then. Well, we’ve evolved since then and there are things we need to unlearn and learn anew. That’s where my passion lies in writing this blog.

So, let the creating, transforming Masculine-Feminine Energy flow as I put fingers to the keyboard and apply a fraction of the newfound knowledge that Walter Russell has left us in his signature work THE UNIVERSAL ONE to our experience and handling of Masculine-Feminine energy.

## SUBTLE ENERGY AT WORK

We can be so preoccupied with our creations in life as to become oblivious to the subtle energies at work within us that bring them about. The creating energy of life is very subtle, when one stops to think about it. For example, consider the giant sequoias that have taken decades and even centuries to grow. On a smaller scale, consider the lowly grass blade that seems to grow so fast in

Summer that one might even be able to observe it growing. Yet these creations of Mother Nature make no commotion as they slowly increase their mass molecule by molecule. The slow growth of our own bodies testifies to the subtle nature of the creating energy of life. What Walter Russell presents in his book about energy is also a testament to the subtle but unconquerable nature of life. My desire in this post is to explore some of the implications of his writings. So, I'm just going to write down my thoughts as they present themselves, trusting they will flow together in a coherent manner.

## ENERGY MUST FLOW

Energy wants and needs to flow in order to create forms, illusions though they are said to be. Masculine and Feminine forces interacting with one another make possible the flow of creating energy. The creating energy that flows through their interactions is the creative power of Love manifesting the ideas in the Mind of the Creator. This is how Walter Russell's cosmology works.

When I speak of Masculine and Feminine, I do not equate these words with male and female, nor with men and women. As we now know in this age of enlightenment, these energies are at work in both men and women. The Feminine energy is by design, and hormonal chemistry, more dominant in women and the Masculine energy more dominant in men. This is not always the case, but is generally so. The ideal would seem to be a balance between these two forces in both men and women — something that I have personally worked at in myself over the past two or three decades.

These two forces are not attracted toward one another, as is commonly thought. Walter Russell's view is that masculine energy spirals centripetally (inwardly) toward its apex, or vortex center, and is thus contractive and magnetic. Contrarily, feminine

energy spirals centrifugally (outwardly) away from its spex and is thus expansive and radiative. One inhales while the other exhales only to restart the inhaling cycle. As the positive masculine force winds inwardly toward its maximum potential charge, it discharges energy via a feminine emoting phase of expansion, much like a spring winding and unwinding. So, there is a continuum here at work. (Is this perhaps what our *emotions* are all about?)

Russell's primary point is a correction to the current scientific understanding of the law of attraction. The way he sees this law is that positive charge is attracted to and attracts positive charge, and that negative charge repels both positive and negative charge.

## MALE AND FEMALE ATTRACTION

Males and females of the same species couple by reason of the law of attraction: positive attracts positive. This is contrary to the common understanding that positive attracts negative, or that the negative female is attracted to the positive male; that men radiate (positive) and women respond (negative) to men; that women are therefore the "weaker" sex and men the "stronger;" that women are to be obedient and subservient to men. All these thwarted concepts and attitudes are the result of a fundamental misunderstanding and therefore misapplication of the law of attraction, not to mention mental fabrications of the patriarchal human ego.

Men are attracted to women and women to men by reason of their positive charge. A lower potential seeks a higher potential and a higher potential seeks out a lower. This is the law of attraction at work, whether between members of the opposite or the same sex. Men are attracted to men in some cases, and women to women on the same basis. These raw energies are no respecter of

persons, hormonal chemistry taken into consideration – and genitalia notwithstanding. Genitals are male and female in their design and function. Energy is masculine and feminine in its function and needs to flow between these two forces. As someone simply voiced it in a recent conversation around the subject of LGBT, the chemistry allows the energy to flow, and that's what relationships are all about, isn't it.

Masculine energy is the *attractive* force of this universe of integrating matter, which increases in density as pressure and positive charge increases. Feminine energy is *magnetic* and is the repellant, or separative, force of this universe of disintegrating matter. Where they meet in what Russell calls the "inertial" plane, these forces come into a state of balance which he designates as a "bi-sexual" zone. (I do not yet see the implication nor the application here.)

## AS ABOVE SO BELOW. AS BELOW SO ABOVE

How things work in the "physical" world of effects mirrors exactly how things work in the "spiritual" or vibrational realm of cause. In the world we have created, what happens on earth is an exact mirror of what is happening in the heaven of human consciousness. As above so below. Because of human interference and manipulation, the harmony and beauty in the Heaven of Divine Consciousness are not reflected in the world that man has created and maintains. Where man has not manipulated the design for the Natural World, such harmony, beauty and balance are evident. We might say that Divine Masculine and Divine Feminine forces work together in perfect balance and harmony. This is not accurately reflected in our world where historically males lord it over females – a dynamic that is rapidly changing these days with the "rise of the feminine" currently underway.

**The Masculine gathers the energy of the expelled and exhaustive Feminine force unto itself to empower his creativity. He contracts light energy into integrating form. He is Brahma, the Creator, in Hindu religious tradition, which holds to the belief that the universe is cyclically created and destroyed.**

**The Feminine discharges the built-up potential of the Masculine in order to disintegrate structured form. She is Shiva, the destroyer, in Hindu religion. She destroys form in order to re-create new form. In this sense, she sees to it that the Creative Process continues to cycle. She does not settle for what the Masculine has created as “permanent” reality, but rather clears the creative field in order for new creations to come into being – sometimes in a fitful outburst of wrathful anger. So, she gives her responsive energy to Brahma so as to foster the ongoing process of creation. Then there’s Vishnu whose role it is to maintain and preserve Brahma’s creations. Vishnu is the second Hindu deity who is both male and female. Perhaps he/she is who Man is designed and intended to be as Steward of the Garden.**

## **THE “BATTLE OF THE SEXES”**

**These two forces are integrated in the Natural World and are beginning to be allowed to integrate more and more in human beings. The so called “battle of the sexes” describes the creative dynamic at play between these two forces in the Creating Universe. As I said above, Masculine and Feminine forces are raw energies that are no respecter of persons or gender.**

**In the hands of the human ego, they are being used to enslave women and men and destroy life on Earth, all to enrich the few who maintain power and control over the masses. Not for much longer, however.**

A third force is needed in order to bridle in these raw forces. Left to their own, they take on the false identities of human nature, dividing men and women in a competitive struggle for power and control over life and the illusory world they create, including their offspring, played out in the legal battle for custody in divorce courts. So long as one force dominates in the affairs of human beings, imbalance and imposition of one will over the other continue to sow the seeds of conflict and war. So a third force is needed – *and is rising today* – to harness and balance these raw forces.

## THE “LAW OF THREE”

Here is where Gurdjieff’s “Law of Three” comes into play, which states that when three forces come together, a fourth and totally different state is born of them. That third force is Love. Spirit. A spiritual force that originates from a higher level than that at which men and women presently conduct their warring affairs on the horizontal two-dimensional plane. The vertical component of Love transforms and levels the playing field, so-to-speak — the field that the poet Rumi speaks of: *“Out beyond ideas of wrongdoing and rightdoing there is a field. I’ll meet you there. When the soul lies down in that grass the world is too full to talk about.”* When we meet in that field, a fourth and totally different state is possible: the New Earth.

This Spirit brings with it seven other spirits, or gifts, that are designed to help us meet the various needs and conditions that present themselves along life’s creating journey. The late spiritual teacher Lloyd A. Meeker (Uranda) presented them as “Seven Steps to the Temple of Light.” There’s Patience, the first step toward enlightenment. Tranquility and single mindedness, the second step. The gift of Blessing is the third step. Can you imagine men and women being a blessing to one another instead of being competitors? A fourth gift is Purification, the

detoxification of our words and feelings toward one another; our selfish intentions and motivations, not to mention our lack of respect for one another. The expression and application of these four gifts of Spirit bring about the assurance and confidence of authenticity, along with the fifth step of Radiance, and with it the joy of success and victory. The sixth gift of Spirit is Wisdom, Sophia, whose gift is the sense of what is fitting in our speech and actions with one another and with our shared world. At this level of creativity, Masculine and Feminine forces are brought into balance. Peace is known at a deep heart level, bringing with it the experience of oneness with the All, Love, the seventh gift of Spirit. Enlightenment dawns. These are the qualities and gifts of our Being, our true and divine Self.

In conclusion, I will simply reiterate what I have written above. Our true identity is not as men and women. Our true identity is as Human Beings. I am not only a man. I am a human being in a male form with both masculine and feminine creative energies at my command for creative work on Earth. My origin and Home is Heaven. I have come here from Heaven, as we all have, to bring Love into the world and to allow Love to create the New Earth. Let us be about our divine mission and purpose together as Human Beings, God incarnate on Earth.

Thank you for sharing my thoughts and meditations. I welcome yours. Until my next post,

Be love. Be loved.

Anthony

STATUS ([HTTPS://HEALINGTONES.ORG/TYPE/STATUS/](https://healingtones.org/type/status/))

## **Masculine-Feminine Energy, part III: A Balancing Act** **(<https://healingtones.org/2018/11/11/masculine-feminine-energy-part-iii-a-balancing-act/>)**

Masculine and Feminine *forces* balance one another in the “Creating Universe” of Walter Russell. In this third post of the current series, he expands his consideration of electricity and magnetism to include the balancing act performed by the

**masculine and feminine forces. I shall excerpt this chapter in its entirety, along with graphics, from his 1927 signature work THE UNIVERSAL ONE.**

**(Note: you can open the graphics in a new tab by right clicking on the image for a drop down window and a bit larger image. Also, all underscores are mine.)**

## CHAPTER IV

### POSITIVE AND NEGATIVE ELECTRICITY

*Again it must be repeated that in this universe of motion-in-equilibrium all energy equalizes itself in two equal and opposite swings of the cosmic pendulum, no matter where in the cycle those opposites of motion appear.*

*The cosmic pendulum swings forever between positive and negative electricity, eternally transferring its constant of energy from one dimension to another, but never changing that constant.*

*The opposing energies of the two swings, added together, make one equalized unit of the universal reproductive constant.*

*More than this, these opposing swings are simultaneously equalized at corresponding points in each of the ten octaves.*

*Electric action and its magnetic resisting reactive flow are simultaneous and in equilibrium at all times.*

*Positive electricity is an endothermic, contractive force which is actively absorbing a comparatively large quantity of generative light units of heat which raises its potential, and is expelling a smaller number of them, devitalized into magnetic radio-active emanations, thus slightly lowering its potential.*

*Negative electricity is an exothermic, expansive force which is reactively absorbing a small quantity of generative light units of heat which slightly raises its potential, and is expelling a greater number of them, devitalized into magnetic radio-active emanations, thus lowering its potential.*

*In the term “negative electricity,” the word “electricity” is used in the generic sense, as the inclusive word “man” is used to represent both sexes.*

*Electro-positive systems are preponderantly charging systems, while electro-negative systems are preponderantly discharging systems.*

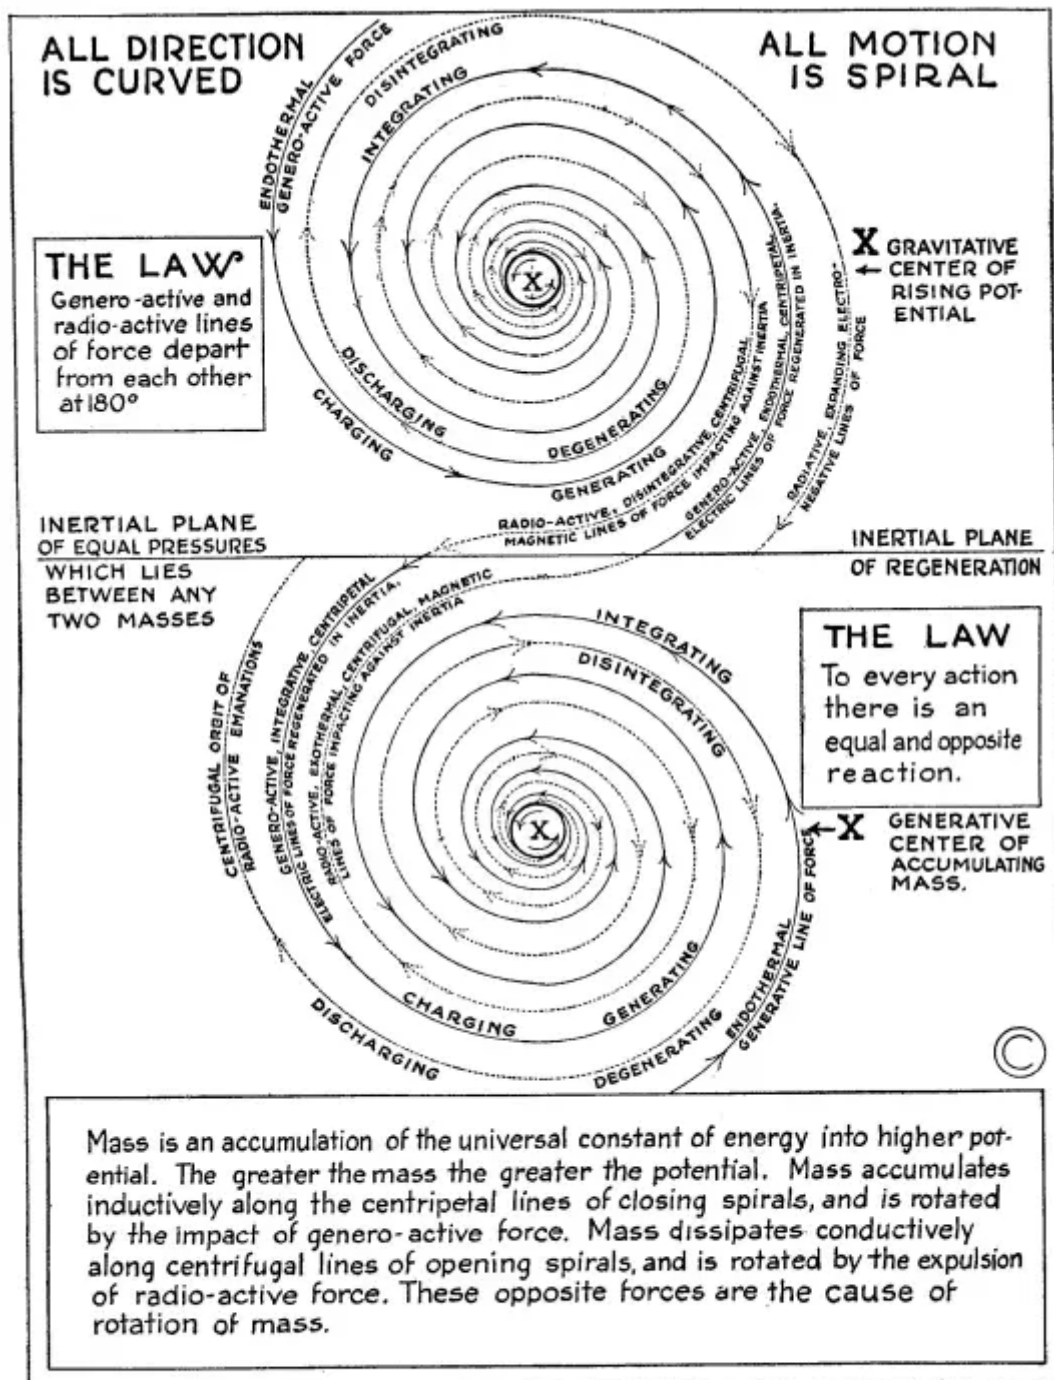

*Charging systems are in the positive half of the octave, the tones of which are generatively dominant. These systems are forcing magnetism out, and because of this they grow more compact. They therefore grow smaller, tone by tone to the fourth tone of the octave. Their atomic volume lessens and their density increases as magnetism is squeezed out, just as a sponge lessens in volume and increases in density as water is squeezed out.*

*Now must it be clearly understood that magnetism, expelled by electricity from within a charging system, did not enter that system as magnetism or as negative electricity. It entered as positive electricity and became devitalized into negative electricity by nucleal absorption of its positive charge. It was then expelled from the higher inner pressure to the lower outer pressure of the system.*

*Discharging systems are in the negative half of the octave, the generative tones of which are weakened. Weakening genero-activity results in weakening radio-activity which causes the systems to grow less compact. They, therefore, grow larger, tone by tone, from the fourth to the master tone. Their volume increases and their density decreases as magnetism is allowed to return, just as a sponge increases in volume and decreases in density as water is allowed to return.*

*increasingly preponderant and dominant until the consequent increase of potential changes the dimensions of the system. They then appear to be another substance.*

*Discharging systems are simultaneously charging, and their negative discharges become decreasingly dominant until the*

*consequent lowering of potential changes their dimensions. When they have readjusted their various dimensions, they in their turn appear to be another substance.*

*Charging systems are preponderantly generative, male systems, while discharging systems are preponderantly radiative, female systems. Charging systems are exactly balanced by discharging systems.*

For example, exercise discharges energy. It is thus a female activity. At the same time it triggers an increase in muscle mass, a male activity of contracting energy, which in turn radiates discharged energy, a female activity — and the cycle is ongoing, one force giving itself to and empowering the other. My young son used to say “Let’s go for a walk to get some energy” — and he was right-on. While we expend energy exercising we increase the potential of our core energy. One can also think of this as the “Breath of Life,” which is twofold in its function and activity: inhaling and exhaling. But it’s one breath.

## TEN OCTAVES OF SEVEN TONES

*All systems are divided into seven tones of energy.*

*One charging tone, and its exact mate in a discharging tone, balances as one unit constant of energy.*

*There are four exactly equal unit constants of energy in each octave.*

*An octave is one universal reproductive constant. Ten octaves constitute one cycle.*

*Tone 1+ is a charging system exactly balanced in all its periodicities by tone 1–.*

*Likewise tone 2+ is balanced by tone 2–, and tone 3+ by 3–. Tone 4± is a double tone which is neither positive nor negative. It is bi-sexual.*

*These seven tones of four unit constants make up the total universal constant of energy which is omnipresent throughout the entirety of this universe of Mind.*

*Consider, for an example of positive charge attracting positive charge, the sun of our solar system.*

*It is the nucleal center of this system, the point of maximum positive charge. It is therefore the high potential point of the system.*

*Consider this planet. It is a doubly charged mass, which means that it is both positive and negative.*

*Its preponderance of positive charge is always toward the nucleal center, which means that it is always toward the light.*

*Its preponderance of negative discharge is always away from the nucleal center, which means that it is always away from the light.*

*The positive charge of this planet is therefore preponderant in that portion which is in daylight and the negative discharge is preponderant in that portion which is night.*

*The daylight portion of the planet is generative and endothermic, which means active, contractive and heat absorbing.*

*The daylight portion is that in which the potential is increasing, where flowers open their petals and relive, where life is regenerative and wide awake.*

*The dark portion of the planet is radiative and exothermic, which means inactive, expansive and heat expelling.*

*The dark portion is that in which the potential is lowering, where flowers close their petals and become dormant, where life is devitalized and fast asleep.*

Well, not all of life is dormant at night, as one reader pointed out in a recent comment. There are flowers that open at night only. The Moonflower comes to mind, as well as Four O'Clocks, the Evening Primrose and Casablanca Lily. One may well explore as to whether nighttime bloomers are female plants and daytime bloomers male. All flowers are Mother Nature's creations using Father Sun's energy. Unlike in man's world, there is no competition in the Natural World of the Creating Universe. There is only cooperation and co-creation.

Russell explains how the light rays and heat of the sun do not travel to the planets directly but pass through a very dark and cold space on their way to the surface of our earth, for example. In

**other words, we do not feel the heat of the sun directly. This is fascinatingly rectifying of common belief and orthodox thinking.**

*Just so with all of the other planets.*

*The positive charge moves around them as they revolve, ever keeping as near as possible to their positive nucleus, the sun.*

*It is a well known fact that high potential discharges into lower potential.*

*Consider the radiative rays of the sun as negative light units expelled by positive contraction, which forces them to seek lower pressures and lower potential.*

*It might be argued that these negative rays are attracted by the positive charge of the daylight portion of the planet.*

*Consider the law of pressures as stated elsewhere which says that between any two masses is a line or plane of equalized pressures.*

*As the light units which constitute the rays circle spirally and centrifugally around the sun in their search for lower pressures exactly as this mass of light units which is our planet circles around the sun, they continue to expand and become increasingly negative the farther they recede from the sun.*

*It must be interpolated right here that “light rays” do not proceed directly from the sun to a planet in straight lines. They follow the orbital lines of lowering pressures exactly as does this planet.*

*All direction is curved and every curve is a part of an orbit.*

*When the light units which we familiarly term “light rays,” reach the inertial plane of equalized pressures between the mass of the sun and the mass of this planet, their expanded masses*

*impact against it and continue beyond it in an ever increasing state of solidity.*

*These expanded, negative particles which have reproduced themselves in transit then become positively charged as they impact with, and plunge gravitatively through the pressures which increasingly rise as they near the mass of this planet.*

*Eventually they impact against the planet as positive charge attracted toward another positive charge. The potential of each is increased by this impact and the heat generated by magnetic resistance to the impact is absorbed as accumulated energy until it becomes devitalized and is released by the turn of the planet away from the light.*

*For another example, consider the familiar lightning flash which we know as “forked lightning.” Lightning is a highly generative, positive charge seeking its own pressure and potential.*

*The maximum positively charged high potential and high pressure of this planet is that part which is nearest its center.*

*Lightning and all the forks of lightning are gravitative. They always seek the planet. Never do they proceed in the opposite direction toward negative discharge except in rare instances where a minor charge leaps upward toward a cloud of higher positive charge, or higher potential.*

*This latter effect is exactly analogous to that of an iron nail leaping upward toward a magnet.*

*Lightning seeking its own potential and an apple falling to the ground are effects of exactly the same cause. Gravitation is the cause of each.*

*Each is taking a “short cut across lots,” through intervening pressures, to find its equal pressure.*

*Later it will be seen that the cause of rotation and revolution, together with all of their respective variations and periodicities, can only be solved through the understanding that positive charge attracts positive charge, and negative discharge repels both positive charge and negative discharge.*

Well, there you have it – or maybe you don't and have to read it a couple of times, as I had to. In my next post, I will attempt to apply all this newfound knowledge to our experience and handling of our masculine-feminine creating energy. This will admittedly be a challenge — and I do have a dawning sensing as to how I will proceed in such a delicate thinking process, especially in the wake of a recent in-depth and insightful conversation my wife and I had with one of our sons and his wife during their richly nourishing visit from Ashland, Oregon, this week — a couple who, for me, exemplify the grounding of masculine-feminine energy in the dance they do together in their shared creative field. We shall see how this unfolds in my final post of this series. Until then,

Be love. Be Loved.

**Masculine-Feminine Energy, Part II:  
Opposing Forces**  
**(<https://healingtones.org/2018/11/03/masc>**

# feminine-energy-part-ii-opposite-forces/)

*"It is not the negative "charge" of the female which is attracted to the positive charge of the male, but rather the positive charge of each attracts the other." (Walter Russell)*

In his comprehensive work and captivating book **THE UNIVERSAL ONE**, Walter Russell lays out a scientific foundation for understanding how the "Creating Universe" works energetically. In sharing excerpts from his book, my hopes and intentions are to offer insight into the way we see and experience out

sexuality. We incorrectly identify with our male and female genders, saying "I am a man" or "I am a woman." However, these are not our identities. On the *physical* plane of life, the words "male" and "female" identify the gender of our human capacities. But we are not our human capacities. We are Human Beings inhabiting these earthen forms, endowed with mental, emotional and spiritual capacities for the expression of our creativity.

Russell says we are "creating" human beings, and the energy that empowers our creativity is twofold in nature: masculine and feminine. However, it is One energy, not two different forces. It is the energy of the Universal One — what Russell calls "Mind" (with a capital "M") throughout his book, and what we have come to call "God." This energy moves in two different and opposing directions: inward and outward, toward and away from the apex of a spiraling vortex of creating energy. On the *spiritual* level, the words "masculine" and "feminine" identify the nature of our singular creating energy. Note that I use the singular "energy" with a hyphen between the words *masculine* and *feminine* to call attention to this reality of singleness.

**In this post, I share Walter Russell's explanation of the opposing manner in which this singular energy moves and interacts within itself as it creates and dismantles form through a creative process. I find this explanation, and all of Russell's thought processes and concepts, both fascinating and rectifying. I hope you do as well. (Tip: if you don't understand what he's saying, just keep moving as he'll say it another way the next few lines.) So, with no further ado, I give you the genius himself, Walter Russell.**

## TWO APPARENTLY OPPOSITE FORCES

Walter Russell

*It must be remembered that electricity is the attractive force and that magnetism is the repellant force. The attractive force attracts only attractive force, which is itself.*

*Electricity attracts electricity. Electricity does not attract the repellant force. Neither does electricity repel the repellant force.*

*On the other hand, magnetism, which is the repellant force, does nothing but perform its function of repelling. It does not attract itself. A repellant force cannot be an attractive force, nor can the attractive force be a repellant force.*

*Each can but fill its own office; one attracts, and thus gathers light units together into an appearance of solids of matter. The other repels, and thus pries light units apart into the dissolution of solids of matter, into gases and vapors.*

*Magnetism is that force within the universal Mind substance which tends to preserve the Oneness of universal uniformity.*

*Magnetism desires a formless and dimensionless universe, just as electricity desires a universe of form and dimension.*

*Magnetism prevents the apparent separation, or division, of divine Mind into parts as electricity attempts this apparent separation.*

*All the force of electricity is exerted in the attempt to create the illusions of form and dimension.*

*All the force of magnetism is exerted in the attempt to destroy all illusion, all form and all dimension.*

*Neither force completely fulfils its desire, for each partially thwarts the other.*

*The energy of magnetism is the elastic energy of expansion, a straining energy ever pushing toward the inertial line of equalized pressures which lies between any two masses, while the energy of electricity is ever pulling toward the pulsing heart, the gravitational nucleus of every mass.*

## **ELASTICITY**

*One of the outstanding characteristics of motion is elasticity which also appears to be an attribute of the One substance.*

*Elasticity is due to opposition.*

*Elasticity is that force developed in the One substance of Mind as a reaction to the action of electricity.*

*It is this quality of elasticity which gives magnetism its rebounding force.*

*This elastic, magnetic reaction which is forever and eternally pressing against electric action, is that force which surely restores all opposed motion to inertial equilibrium.*

*Imagine electricity as a compressed spring, with magnetism eternally ready to take advantage of any let-up in the contractive force which is holding it in compression, no matter how slight a relaxation that may be.*

*If one could imagine such a thing as an absolutely complete and sudden withdrawal of all electric contractive energy, the instantaneous response from this elastic counter pressure would cause a cosmic explosion which would instantly destroy all appearance of form. The universe would then be one of equalized pressures, and opposed motion would be at an end.*

*This sudden expansion is exactly what occurs when man combines two or more elements which desire to get away from each other because they are tonally too far removed from each other to be possible mates. The elasticity of magnetism takes advantage of the sudden letup in the process of generation and rebounds so swiftly that it instantly tears apart form which otherwise might take a million years to disintegrate.*

*It is this force of elasticity in magnetism that is constant in its resistance to any appearance of integration into any form whatsoever.*

## **ELECTROMAGNETIC OPPOSITION**

*Magnetism is radiative and repellant, as electricity is gravitative and attractive. Magnetism repels, electricity attracts.*

*That which electricity integrates through gravitation, magnetism disintegrates through radiation.*

*Magnetism is the brake upon the wheels of electricity resisting its generation of higher potential and registering that resistance in heat.*

*Electricity is the accelerator which speeds magnetic radiation, the expansion of which is registered in cold.*

*Electricity and magnetism are actually opposing forces which leap away from each other in exactly opposite directions.*

*Forces which depart one from the other do not attract each other.*

*Opposing forces oppose each other.*

*To say that positive charge and negative discharge attract each other is to say that electricity and magnetism attract each other.*

*This would be equivalent to saying that centripetal force attracts centrifugal force, or that generation attracts degeneration, or that a charging body attracts a discharging one.*

*One might as appropriately say that life attracts death.*

*Electricity and magnetism are opposites, and opposites move in opposite directions.*

*One is accustomed to thinking that male, which is preponderantly positive, attracts female which is preponderantly negative.*

*It is not the negative "charge" of the female which is attracted to the positive charge of the male, but rather the positive charge of each attracts the other.*

*In youth, when the attraction of opposite sexes is at its maximum, the positive charge of each sex is at its maximum.*

*In age the negative discharge increases, the disintegrating magnetic force dominates, the positive charge decreases, and as a result the attraction of each sex for its opposite decreases until it disappears and repulsion takes its place.*

*The apparent attraction of each action to its reaction is due to the desire of the active force within each for accumulation, and the consequent continuance of the evolving idea of itself through that accumulation.*

*When action is preponderant as positive charge, form of idea evolves. When reaction is dominant as negative discharge, form devolves. The record of the idea of both action and reaction is registered in inertia.*

*The chemist, when breaking up compounds, is accustomed to seeing a negative element seek the positive pole, and a positive element seek the negative pole.*

*He would know better how to interpret this if he would think of his elements in terms of sex, and also consider the process of regeneration of negative discharge by impact against the inertial plane between a discharging and a charging mass.*

*When the positive charges of negative reactions are attracted to positive poles, centrifugally dominant force is conquered by centripetally dominant force. The negative reaction then becomes a positive action. The equalization causes reproduction. The union of an action with its reaction is always followed by the reproduction of separate actions and reactions. These reproduced actions and reactions are rebounds of the union.*

*Magnetism opposes electricity in its desire to transform this universe into one solid, motionless, non-elastic ball of positive electricity. Electricity opposes magnetism in its desire to transform the universe into one of equalized pressures where opposites disappear into dimensionless non-opposition, Positive electricity is preponderantly electric. Positive charge attracts positive charge.*

*Negative electricity is dominantly magnetic. Negative discharge repels both negative and positive charge, for both are electric and magnetism repels electricity.*

*Again must it be written down that electricity and magnetism are not opposites, nor are they two forces. There are no opposites of anything in this universe of the One Thing.*

*Mind is the One substance. Thinking Mind is the One force.*

*If Mind were not a thinking substance the universe would be without force. It would be without life. It would indeed be a dead universe.*

*Thinking is a positive action. To every action there is an equal reaction which is the opposite or negative matrix, of that action.*

*The minus charge of the reactive negative matrix is equal to the plus charge of the active positive form of idea.*

*The positive form of an idea is stored in inertia as a negative matrix of that form.*

*There is but One active force of thinking Mind and that is the father force. Man calls it electricity.*

*Electricity appears as the first action of the process of thinking and disappears, like temperature, in motion-in-inertia.*

*Electricity therefore has no existence. It belongs to motion, and not to substance.*

*It is desire which causes the One substance to appear to change in state as it performs its function of recording form of idea.*

*Opposites are born of attempted division of unity or Oneness.*

*The very first action which attempts division of unity develops the reactionary apparent opposite reaction which opposes that attempted division.*

*The father force, acting upon the desire of Mind to create, finds that as Mind is the only substance, idea and its form must be developed out of that One substance of Mind.*

*The father force which is the image making faculty of Mind, proceeds to create idea and then to fashion the form of that idea out of the One substance.*

*The opposing magnetic force is then born to prevent the fashioning of the substance of Mind into form. For a time it vainly opposes such formation, but eventually it succeeds.*

*Electricity and magnetism are the two major dimensions of the universal constant of Mind.*

*Therefore the beginning of creation is the beginning of an attempted separation of the One substance by the One force of the substance.*

*The very attempt to divide the One substance gives the appearance of, but does not make, two substances.*

*It only develops two equal and opposing states of motion which man calls "forces." It but creates two illusions.*

*Part of the energy used in the attempted division into two is given to each, and the sum total of this energy is the exact amount of the energy of the One.*

*Electricity and magnetism are attributes of motion only and as separate entities they are but illusions of the substance of matter.*

*Form, or solidity of matter, is an electromagnetic record of states of motion. Therefore solidity of matter is but an illusion which is measurable by electro- magnetic dimensions which, in themselves, are but illusions.*

*Out of the father force then, is born the mother force, which man calls magnetism. The symbolism of the creation of Eve out of Adam is basically sound.*

*The father force creates all idea and gives it the appearance of form; but that idea cannot be perpetually held as idea in the appearance of form, nor can it be reproduced without the union of the father with the mother force from which the father force has parted and with which it makes an equilibrium of unity.*

*Both idea and the form of idea return to motion-in-inertia as memory and remain there for a time as formless idea.*

*A union of the father force with the mother force brings it back again into the form of idea, for the united energies of these apparent opposites make the total required by the One.*

*Just so with positive electricity and negative electricity. They are not two forces. They are but two aspects of One force attempting to separate, each by its own opposite method, thus*

*becoming two forces.*

*They never succeed in so doing. Each is charged with the other, permeated more or less in accord with its periodicity.*

I love the dynamic creative tension he describes between these two opposing aspects of the One force. I hope I am making us think outside the traditional box of scientific knowledge. In my next post we'll see how these two opposing forces balance one another. Until then,

Be love. Be loved.

Anthony
