Towards a Greener Footprint

Cleaner Energy

In 2022 alone, Hikvision purchased **32,852 MWh** of green energy, including solar, wind and hydro power, and generated **4,508.3 MWh** of photovoltaic power ourselves.

Cleaner Materials

Wherever possible, we use clean materials in the manufacture of products. For example, we use a no-paint process to minimize pollutant emissions when producing our turnstiles.

Cleaner Packaging

Using folded cardboards instead of polyethylene to cushion the interior of product packaging alone can reduce our plastic use by **27.9 tons** per year.

📍 **Tonglu Manufacturing Complex**

9.118 MW of rooftop solar panels, with an expected annual power output of 8 million kWh

Green Operations

Cloud-based R&D Platform

Providing 4,200 virtual machines on 500 computing service nodes, Hikvision's R&D cloud platform cuts electricity consumption by nearly **5,000 MWh** and carbon emissions by nearly **4,000 tons** per year.

Smarter Energy Consumption

AI-powered sensors detect the presence of people in our meeting rooms and automatically turn off lights and air conditioning when a room is empty.

Sustainable Water Use

We control the total amount of stormwater runoff and improve the way stormwater is recycled and reused in our office parks.

'Green Office' Initiatives

We implement a paperless office philosophy. Where possible, meetings are held online and printed materials are replaced by their digital equivalents. We also encourage low-carbon business travel.
