

Tips for ADMIRA Decorative Laminates (Worktop)

Improving the lifespan of your laminate worktop surfaces:

1. Please ***do not cut or chop directly on the laminate surfaces*** - always use a chopping board or worktop saver. Cuts and scratches will be more noticeable on dark decor or gloss finishes.
2. ***Always place hot pans, ovenware and irons on a trivet or protective pad*** to protect the laminated surface from intense heat which can cause damage to the worktop if it is placed directly.
3. The ***use of abrasive cleaners and pads, corrosive or aggressive cleaning agents should be avoided*** as they will have a detrimental effect on the worktop surface.
4. The ***use of PVC apron may possibly affect the durability of the HPL on the post-formed edge of the worktops***. This could lead to premature wear in high traffic work areas such as front of the sink and hob.
5. ***Kettles, coffee machines, fryers or any other heat or damp source should not be positioned directly over the worktop joints***. Constant changes in temperature could cause the joint to move and eventually fail.
