

End-to-End Manufacturing of Custom Aluminum Profiles, Parts & Assemblies

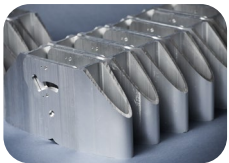

With world-class extrusion technology, scalable manufacturing resources, and downstream value-added capabilities, MMG-Engineered Extrusions can support more of your manufacturing needs.

END-TO-END MANUFACTURING SUPPORT

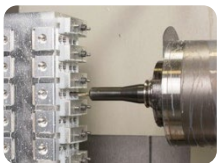

DFM SUPPORT

Our engineers collaborate with customers to help them achieve optimal cost and performance requirements.

CUSTOM EXTRUSIONS

Advanced capabilities for tighter tolerances, consistent quality, and better finishes for even the most complex extruded aluminum shapes.

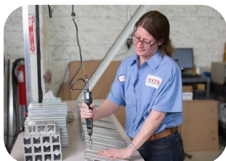

MACHINING & FABRICATION

150+ CNC machines and advanced fabrication technologies across six locations ensure consistent, customized quality for projects of all sizes.

FINISHING

Powder coating, anodization, wet coat, plating, silk screening, and thermal imaging capabilities.

ASSEMBLY & SHIPPING

We support various partial and finished component assembly, kitting, packaging, and fulfillment configurations.

\$30M+

Invested since 2021 in new equipment and technologies

200K SQ. FT.

Manufacturing space dedicated to aluminum extrusion production

55M LBS.

Annual extrusion production capacity using USA-made aluminum

150+

CNC machines across the MMG business

35 YEARS

Industry excellence with 20+ year relationships with several global customers

Need to launch a new product or scale a growing product line? Interested in strengthening your domestic supply chain? Need a manufacturing partner who has comprehensive in-house capabilities? Look no further than MMG-Engineered Extrusions.

HIGH-PERFORMANCE CAPABILITIES

WORLD-CLASS PRESS LINES

Two Prezezi 8-inch diameter press lines--2,750 ton & 2,920 ton--support 55 million lbs. production capacity.

CUSTOM ALUMINUM PROFILES

Produce aluminum rod, bars, pipes and tubes; support alloy series 1350, 6005, 6063, 6101, 6061, 6082 and a range of tempers.

TWO-STAGE QUENCHING

Prezezi HECS High Velocity Air & Water Quench System and Belco Flo-Thru aging ovens optimize quality and consistency.

AUTOMATED HANDLING

Fully automated material flow accelerates production and minimizes surface defects.

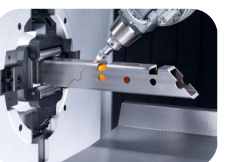

TOOLING MAINTENANCE

Closed-loop die cleaning system ensures we maintain the quality and efficiency of our extrusion dies.

LARGE FORMAT MACHINING

Seven large envelope CNC machining centers able to process custom profiles up to 144" in length.

LASER TUBE CUTTING

Trumpf 5000 tube lasers handle multiple processing actions, including cutting, machining, drilling, and punching, in a single operation.

A proud supply chain partner to 257 U.S.-based customers across many industries.
