

AN **7i** CENTRAL EXCLUSIVE

Turn your chat agent into

# VOICE AGENT

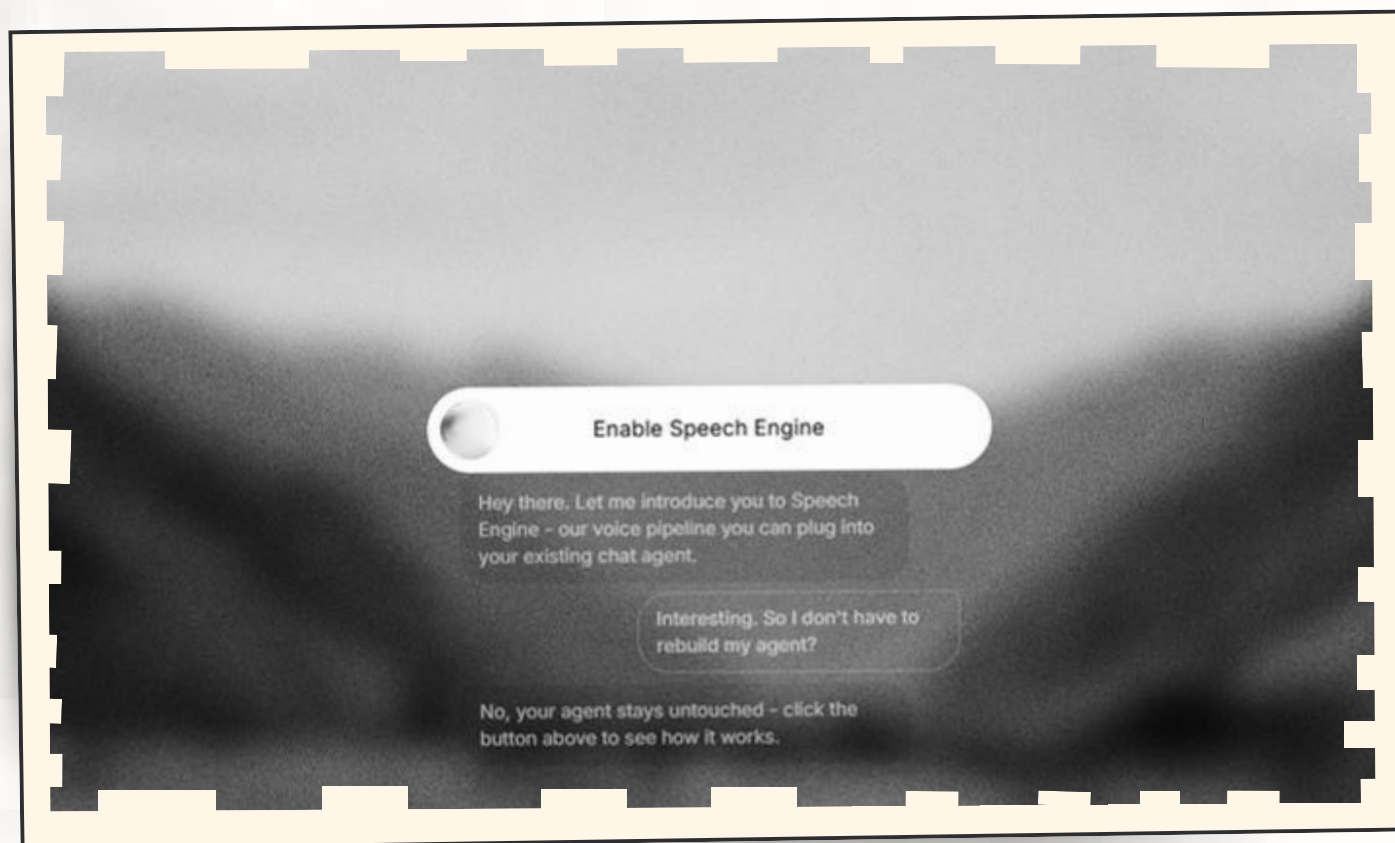

using

**IIElevenLabs**

# You built a great chat agent

- Now your users want to TALK to it
- But adding voice usually means rebuilding everything

Not anymore, let's make it easier

# The Old Way

- Stitch together separate models:
  - Speech to Text
  - Text to Speech
  - Turn-taking logic
  - Interruption handling
  - Voice Activity Detection

**Add Speech Engine to your agent with one prompt**

**Server SDK**  
Attach Speech Engine to your server. Receive transcripts, pass them to your LLM, and send the response back - all in a few lines.

```
import { ElevenLabsClient } from '@elevenlabs/elevenlabs-js';
import 'dotenv/config';
const elevenlabs = new ElevenLabsClient({
  apiKey: process.env.ELEVENLABS_API_KEY,
});
const engine = await elevenlabs.speechEngine.create({
  name: 'My Speech Engine',
  speechEngine: {
    // Note we use the wss protocol instead of http
    wsUrl: 'wss://b0223.ngrok.io/v1',
  },
});
console.log('Speech Engine ID:', engine.engineId);
```

**ElevenLabs UI**  
Drop in pre-built UI components - agent orbs, waveforms, and chat widgets - or build your own on top of the same SDK.

**Client SDK**  
Start a conversation session from the browser or mobile app in three lines. The same client integration as ElevenAgents, so upgrading later requires no changes.

```
import express from 'express';
import { ElevenLabsClient } from '@elevenlabs/elevenlabs-js';
import 'dotenv/config';

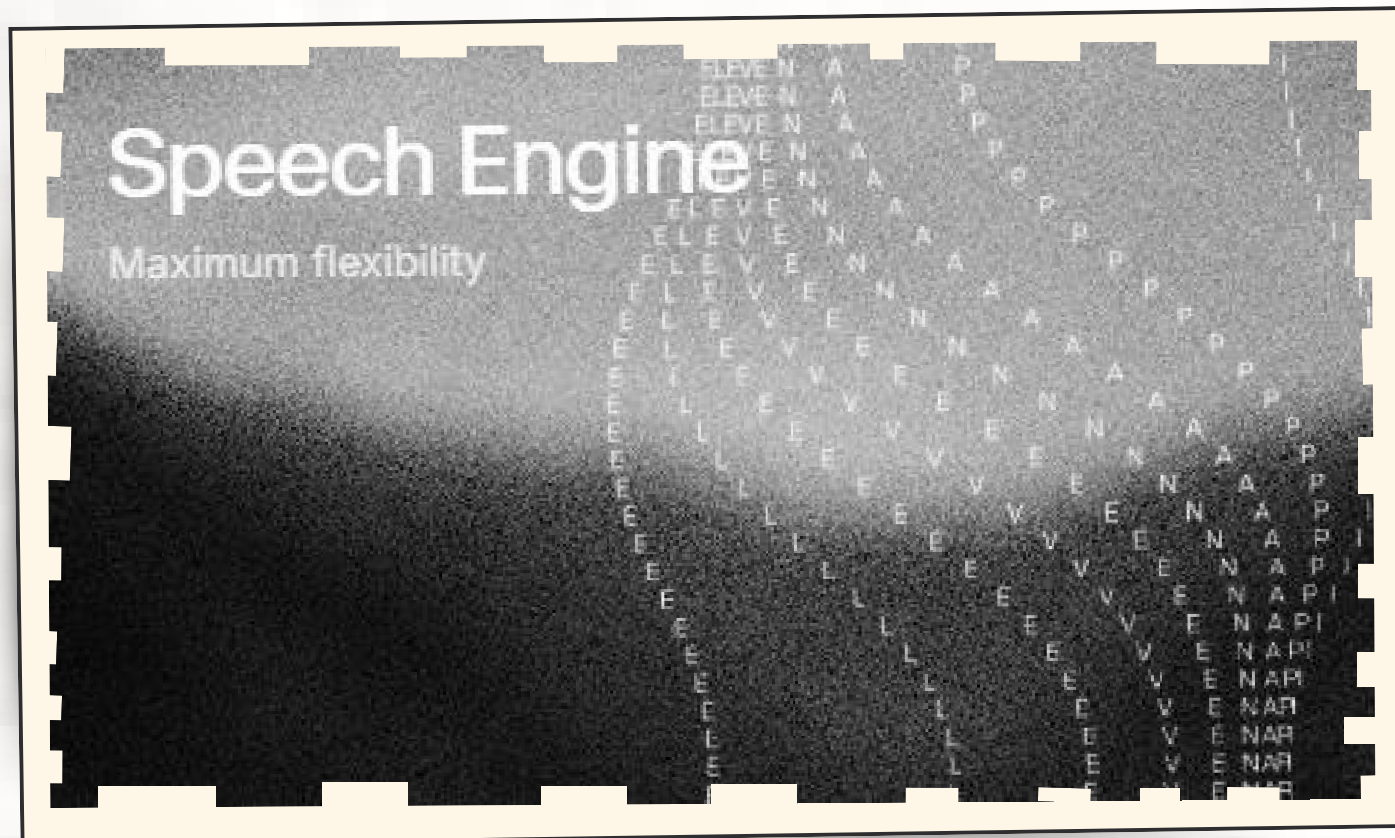

const app = express();
const elevenlabs = new ElevenLabsClient({ apiKey: process.env.ELEVENLABS_API_KEY });
const speechEngineId = 'smg_8x3b4x4h3n7g983c4hd98d';
```

# The New Way: Speech Engine

- One complete voice pipeline
- Add it to your existing chat agent with a **single prompt**

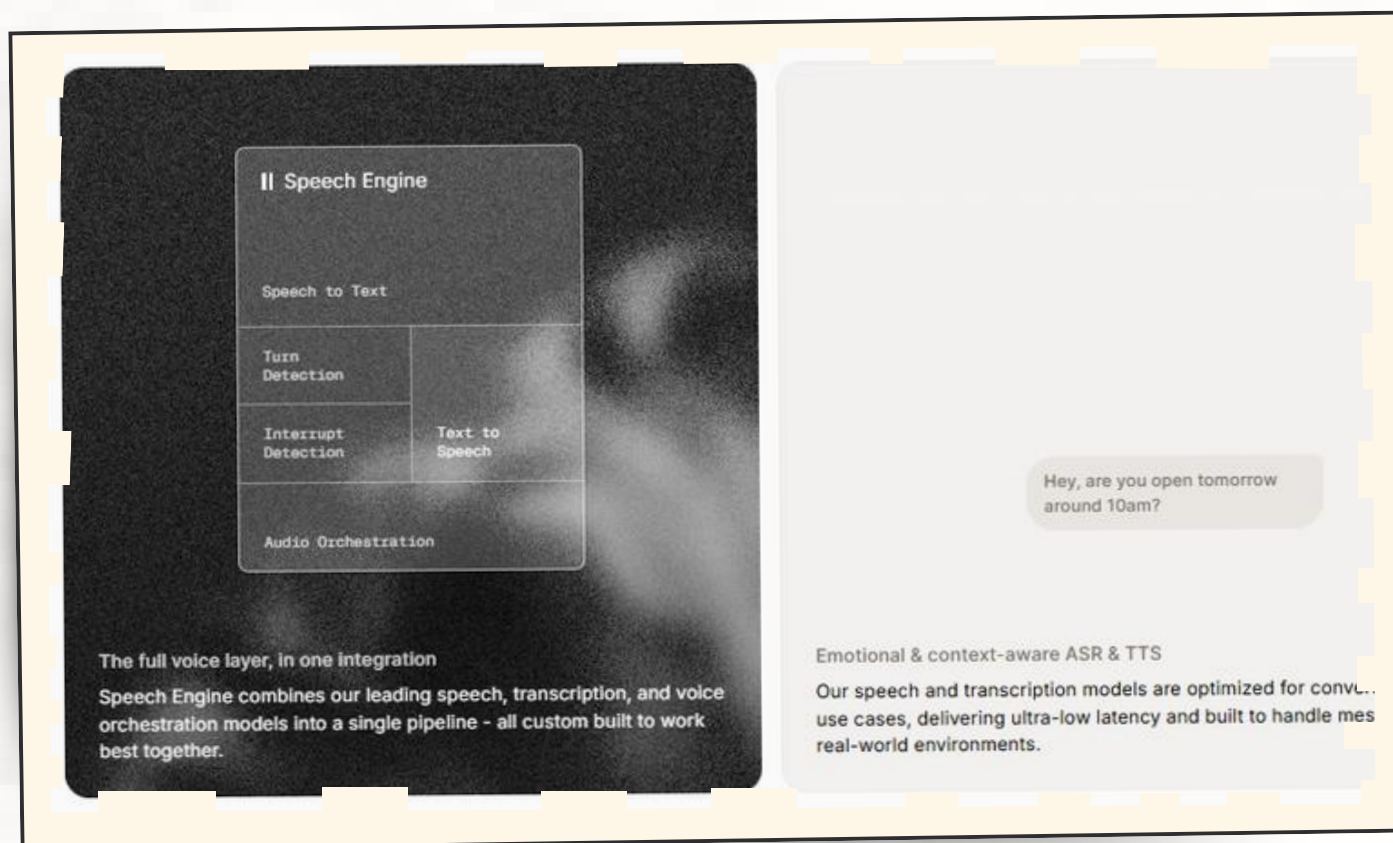

A next-gen AI audio platform powering

# What Stays Untouched

- Your LLM
- Your RAG pipeline
- Your knowledge base
- Your architecture

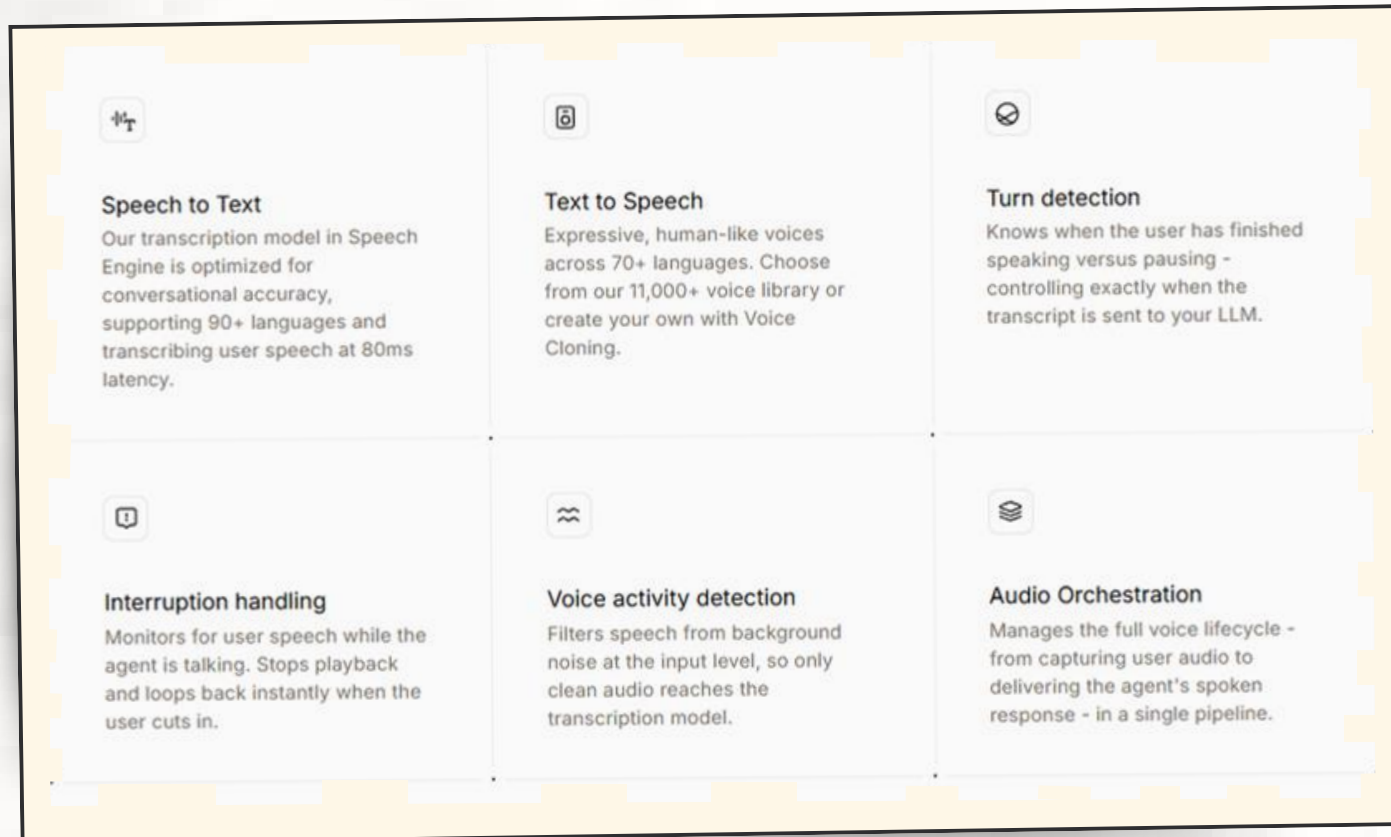

**Only the voice layer changes,**  
everything else stays exactly as-is

# What Speech Engine Handles

- Text to Speech
- Speech to Text
- Turn-taking
- Voice Activity Detection
- Interruption handling

All built to work together out of the box

# Natural Conversation Built In

- Interruption detection? Handled
- The agent responds the way a human would
  - No awkward "let me finish" pauses
  - No robotic turn-taking

#### Sub-second end-to-end latency

From user speech to agent audio response — significantly lower than assembling your own pipeline from standalone API calls.

#### Natural turn-taking and interruption handling

Dedicated models handle overlapping speech and mid-sentence changes without custom logic on your end.

#### 70+ languages, with automatic switching

Speech Engine detects and switches languages mid-conversation without any configuration changes.

# What makes Speech Engine different?

- 70+ languages
- 11,000+ voices
- Enterprise-grade compliance

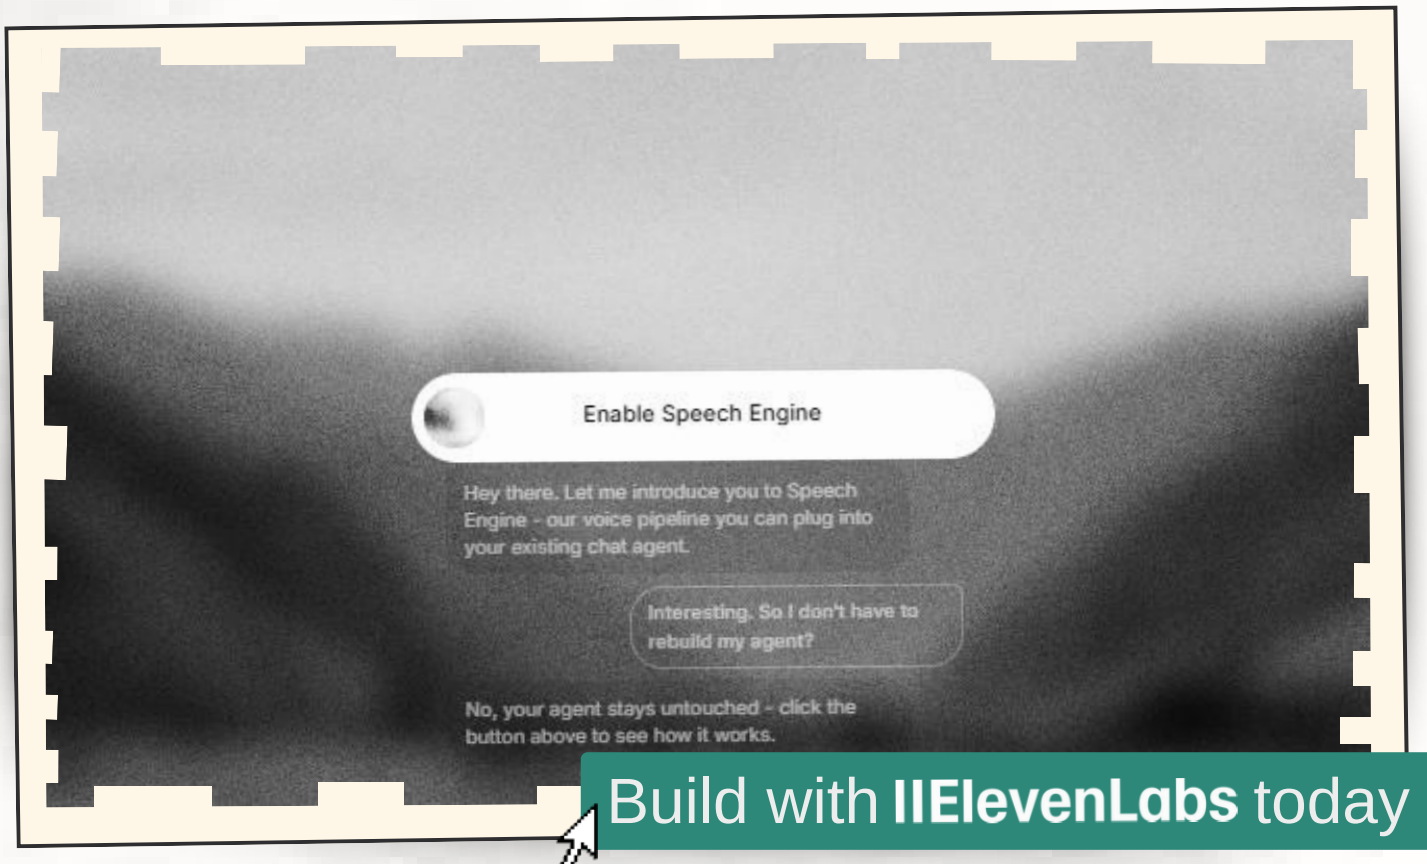

Production-ready **from day one**

# What You Can Build Today Using Speech Engine

- Any chat agent → Any voice agent
  - Customer support voice agents
  - Sales development reps (SDRs)
  - Internal helpdesk assistants
  - Voice-enabled personal tutors

Introducing Speech Engine

## Turn your chat agent into a voice agent

Add human-like voice to your existing chat agent. We handle the voice - your agent's LLM, RAG, and logic remain untouched.
