

DEAD STOCK, RECOVERED.

The Liquidation Engine by RxDirectSolutions & Datarithm

Inventory is your largest investment, but it's only an asset if it turns. When a bottle of high-dollar brand medication sits past its prime, it stops being potential revenue and starts being a liability.

Liquidation Engine is a new **return-to-manufacturer** feature developed through a partnership between Datarithm and Rx Direct Solutions. It provides

pharmacies with unprecedented transparency and control over short-dated and expired returns, including the ability to select value thresholds for returns, determine eligibility and timing, view expected return credit values, and generate return authorizations, debit memos, and shipping labels, as well as, optionally, insuring shipped packages — benefits not typically available through traditional reverse distributors.

HERE IS HOW LIQUIDATION ENGINE CAN OPTIMIZE YOUR INVENTORY RETURN PROCESS

HOW IT WORKS

Scan and Identify

Use QR code to capture lot, serial, and expiration details.

Get Credit Estimate

See real-time value based on NADAC.

Track Return Eligibility

Know exactly when items qualify for manufacturer return.

Recover Revenue

Submit returns with full documentation provided.

WHY IT WORKS

Transparent manufacturer returns with real-time estimates

Lower fees, faster credits (up to 9 months sooner)

Automated tracking with audit-ready logs

Full return kit: authorization, packing slip, label, and insurance

"RxDS turned our dead stock into cash flow in no time. It's an effortless system that pays for itself!"
