

## Hangzhou Yamei Dental Medical Equipment Factory

Catalog

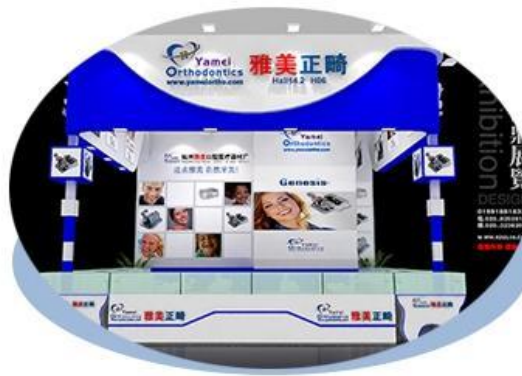

### Pursuit of Yamei, Beauty of Teeth

# Company Profile

Hangzhou Yamei Dental Medical Equipment Factory is located in Hangzhou, Yuhang district, Liangzhu university science park. It is a high-tech enterprises with 2000 square meters' manufacturing base which is committed to the researching , developing, manufacturing and managing of professional orthodontic materials for more than 20 years. Our factory missions are “People Oriented, Quality Excellence, Aggressive Innovation, Safety Production” .Our factory has introduced advanced production equipment and the production technical process, and in accordance with advanced product testing method and equipment, in order to guarantee our goods high quality and can be the top grade goods in the market.

We insist on taking the technology as the first productivity, and strive for promoting the development and introduction of new production and technology. We would try our best to meet customers' needs, and devote ourselves to enhance the quality of orthodontic equipment. Our factory are mainly produce various of orthodontic brackets, molar bands, buccal tubes, orthodontic accessories, archwires, elastics power rings, oral auxiliary materials and tools. Among them CNC brackets and passive self-ligating brackets have won the good market reputation and brought good experience and orthodontic effect to dentists and patients.

# Catalog

# Products Quality Certificates

we have established a strict quality control system throughout the entire manufacturing process, from raw materials organization, production, packing to shipment.

We have obtained registration certificates of Class I, Class II and Class III in China, and have passed ISO9001 & ISO13485, EU CE certificates and US FDA registration.

中华人民共和国医疗器械注册证

注册证编号: 浙械注准20172630537

注册人名称	杭州雅美口腔医疗器械厂
注册人住所	杭州市西湖区三墩镇双桥村油车桥80号1幢101室
生产地址	杭州市西湖区三墩镇双桥村油车桥80号1幢101室
代理人名称	不适用
代理人住所	不适用
产品名称	正畸带环颊面管
型号、规格	见附表
结构及组成	产品由带环和颊面管焊接而成,由符合GB/T3089-2008和GB/T1220-2007中规定的不锈钢材料制成,其中带环由06Cr19Ni10不锈钢制成;颊面管由06Cr18Ni11Ti不锈钢制成。
适用范围	产品供人体牙列正畸用。
附件	产品技术要求

### Yamei Advanced Orthodontic Bracket Design Concept

- ✦ Yamei Orthodontic brackets are endowed with innovation in terms of design. Orthodontic brackets are produced not only using advanced manufacturing technology and mechanical equipment, but also absorbing aesthetic idea of human body.
- ✦ So that orthodontic brackets manufacturing moves on to the stage of personalization and miniaturization, and makes dentists and patients get maximum comfort.

# Orthodontic Metal Passive Self-ligating Bracket

## Metal Passive Self-ligating Roth Plus 6/MBT Plus 8 Bracket

### Advantages

- 1) Mini Shape, adjust size and height so as to realize optimal condition.
- 2) Unlocking is towards the same direction: downwards.
- 3) The ligation space of ligation wings is ample.
- 4) With bottom sliding ball hook.
- 5) With auxiliary hole of orthodontic wires: 0.42\*0.42;
- 6) Rectangle wires are adopted CNC machining, process, the 3 sides of bracket slots are bright and smooth, which can reduce the friction between wires and bracket slot greatly.
- 7) Bracket base is 80 molgbdemum mesh, and hook is ball spherical arc shape design, which can both increase bonding strength.
- 8) 4 sides of bracket are adopted laser welding process, bracket base can be sandblasted and laser marked as clients requirement.

### Special Process

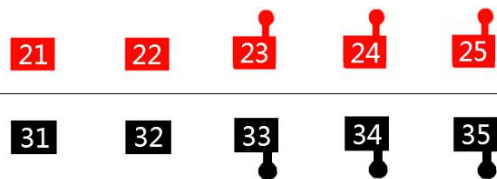

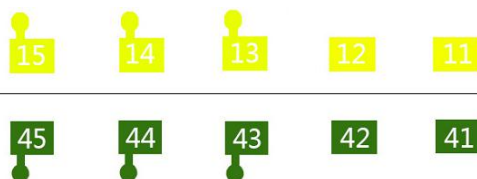

Base Marked Easier to identify the teeth position

Base Sandblasted Increase bonding Strength of mesh base

### Teeth Position Identification

## Orthodontic Metal Passive Self-ligating Low/Middle/High Torque Bracket

### Advantages

Innovative auxiliary hole design which can accelerate teeth movement

Sliding unlocking & locking design, the placement and removal of wires are both convenient, which is easy for doctors to operate. Reducing lean-on operation, patients have no discomfort.

The walls of passive self-ligating bracket are smooth and solid. The slots are high precision which can offer 3 options : high/middle/low torque.

Round shape which is not only comfortable for patients to wear, but also easy to clean. Passive unlocking design is more stable, reliable, not distortion comparing to active self-ligating design.

All sides laser cold welding process provides high welding strength, maintains precision of bracket data, and ensures accuracy of orthodontics.

# Orthodontic Metal Active Self-ligating Bracket

Accurate positioning of brackets: Make the teeth move faster. No ligatures required, there is no dental plaque caused by ligating, more efficient.

Round shape which is not only comfortable for patients to wear but also easy to clean. Its unique polishing process which Reduces the friction between brackets and wires.

The walls of active self-ligating bracket are smooth and solid. The slots are high precision. Smooth streamline edges: improve patients' comfort.

All sides laser cold welding process provides high welding strength, maintains precision of bracket data, and ensures accuracy of orthodontics.

## Orthodontic Passive Machining Self-ligating PLUS 3 Bracket

### Advantages

High flexible material ensures clip still maintain the original effect after unlocking & locking hundreds of times. It is easy and convenient with the use of professional unlocking tools and dental probes.

Reliable structural design to avoid clip deformation and falling problems.

Clip can be directly closed with a finger, which is easy for operation.

80 molgbdemum mesh base retains more bonding area, which can make bonding more accurate and strong.

The clips are easily to operate for both unlocking and locking, and it is also durable.

## Orthodontic CNC Bracket

### Advantages

The 3 sides of slots are equally smooth, and the sizes of slots' 3 sides are all the same. Which can reduce friction between brackets and wires greatly.

The slots are curve which can realize good match between bracket and wires, in this way can improve the orthodontic effect.

Brackets surface are circular bead design, and which is specially polished. Patients those who wear occur rejection very little.

Ultra-thin low wing design can avoid occlusal interference and brackets falling off problems effectively. What's more, it will make patients more comfortable.

# Orthodontic MIM Bondable Bracket

## Advantages

Ligating wings is smooth ball head design which reduces the stimulation of oral, and it can improve the patient's sense of rejection greatly.

Brackets surface are circular bead design, and which is specially polished. Patients those who wear occur rejection very little.

Metal slots are precisely machined, the entrance and exit of wires are processed carefully which can not only reduce the friction between slots and wires, but also can improve torque control of wires.

The center lines of slots are clearly visible which is easy and accurate for teeth position locating.

## Orthodontic Ceramic Self-ligating Bracket with Metal Clip

### Advantages

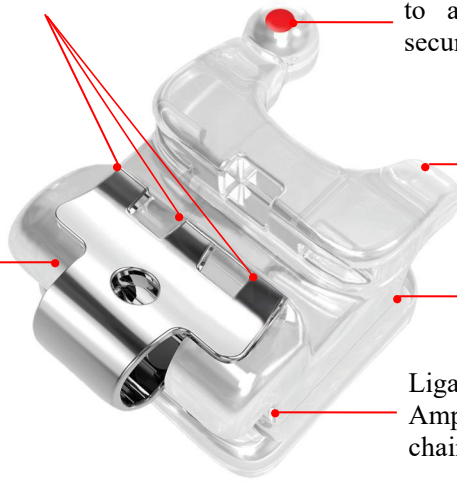

Three-finger mechanism: Secure the wires in the slot while preventing mesial-distal movement.

Smooth rounded hook design: to add patient comfort and secure engagement of elastics.

Advanced ceramic material: Superior aesthetic appearance, strength and fracture resistance.

Triple X base: Superior mechanical bonding with reliable and consistent debonding

Nickel-Titanium tension clip: Exceptional memory properties ensure reliable open & closing for the entire length of treatment.

Ligating wing: Ample undercuts for use of elastic chains and other ligation auxiliaries.

# Orthodontic Full Ceramic Self-ligating Bracket

## Advantages

Esthetic self ligation bracket:

The world best Nano ceramic refining technology through the co-work of R&D with KICET (korea institute of ceramic engineering and technology), which is known to possess the best Nano ceramic material technology in korea, enables the optimal transparency.

Sub-Micron pure alumina ceramic refining technology and Nano particle polishing treatment reduces friction, and discoloration from food such as coffee, tea or curry to maintain stable dental esthetics.

More stable, easier unlocking & locking  
Patented snap spring door mechanism disperses force during opening & closing to prevent door fracture even though in excessive force.

Base contour design which is optimized for teeth surface curvature and fits perfectly on the surface of the teeth.

# Orthodontic Ceramic Self-ligating Bracket

## Advantages

The ceramic bracket whole body is round and smooth, which avoids the damage to soft tissue.

“T”-type ball shape hooks, it is more stable for elastic loops traction.

The hook is in the middle of bracket which is suitable for mesial & distal orthodontic, and is more durable.

Install Ni-Ti spring bolt inside the ceramic self-ligating brackets, so the locking and unlocking operation of brackets is more flexible.

This ceramic self-ligating bracket mesh base is deepen design which can strengthen bonding.

# Orthodontic Lingual Bracket

## Advantages

Perfectly concealed: the brackets and wires are mounted invisibly on the backs of the teeth.

Hardly noticeable: no sharp edges

Quick visible results: through optimal transfer of forces of the teeth.

# Orthodontic Sapphire Bracket

## Advantages

The base is mechanical lock, it has a good firm bonding, as well as for easy disassembly.

Unique double-wide hook design for additional strength.

Smooth rounded hook design for add patients comfort, and secure engagement of elastics.

The slots are smooth, and the surface of brackets are processed Specially. It has good biocompatibility.

# Orthodontic Buccal Tube

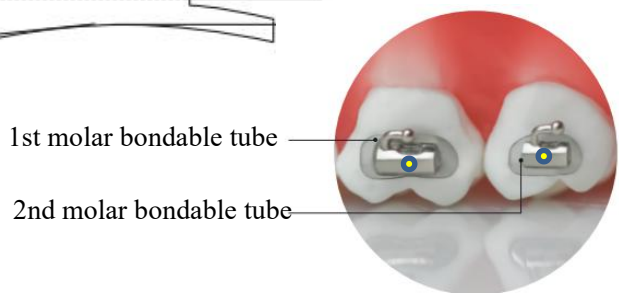

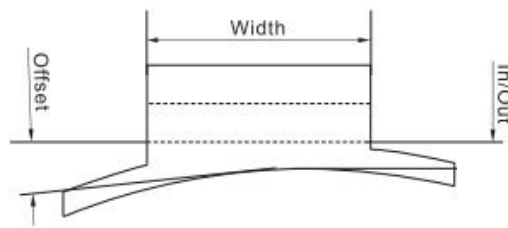

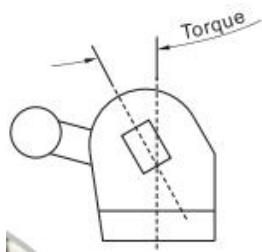

## Advantages

## More features

Mature casting technology is applied to buccal tubes manufacturing, which avoids drawbacks of years domestic manufacturer buccal tubes, and increases the strength and accuracy of buccal tube itself.

The buccal tubes' mesh base and buccal tubes whole part are both applied the most advanced laser welding technology. Cold welding avoids deforming and false welding and etc.

1st molar bondable tubes' different mesh base sizes

Large base: 7.2mm      Standard base: 6.8mm      Mini base: 6mm

2nd molar bondable tubes' different mesh base sizes

Mini base: 5.2mm      Large base: 5.5mm

## Advantages

Domestic Molar Bands: Size #10-36 (1st/2nd molar )

- The bands are all round is curved contour which can realize good fitness on the surface of teeth.
- Memory & elasticity maintained after pre-fit and removal.
- Increased occlusal edge strength to prevent deformation
- Available with micro-etched interiors for maximum retention
- Superior tooth morphology.

Pro-Fit Molar Bands: Size #29.0-44.5

- The bands are all round is curved contour which can realize good fitness on the surface of teeth.
- Memory & elasticity maintained after removal.
- Increased occlusal edge strength to prevent deformation
- Available with micro-etched interiors for maximum retention
- Firm material to withstand additional pressure of extra and intraoral appliances

Pre-Fit Molar Bands: Size #1-36

- Enhanced contoured edges
- Permanent laser marking
- Available with micro-etched interiors for maximum retention

Bicuspid Molar Bands: Size #(Upper #1-28, Lower #3-28)

- Full sizes are available.
- Permanent Size Marking
- Fully Tempered, special processing, more perfect.

## Step 1: Select molar bands

Domestic Molar Bands: Size: #10-36	Pro-Fit Molar Bands: Size: #29.5-44	Pre-Fit Molar Bands: Size: #1-32	Bicuspid Molar Bands: Size: upper#1-28 lower#3-28
---------------------------------------	--	-------------------------------------	---

## Step 2: Select buccal tubes (note: bicuspid molars bands preweld with brackets)

	Single	Double	Triple	OCBT	CBT
Non-convertible					
Convertible					

## Step 3: Add Attachments

	Lingual button curved	Bicuspid lingual cleat	Molar lingual cleat	Seating lug
Lingual attachments				
Lingual sheath	Lingual sheath without hook 	Lingual sheath with hook 	MIM Lingual sheath without hook 	MIM Lingual sheath with hook

# Orthodontic Archwires

## Super Elastic Ni-Ti Archwires (SE)

- Predictable, light continuous force levels.
- Bright finish for optimal sliding mechanics.
- Resistant to deformation for high spring back.
- Consistent accurate arch shapes.
- Satisfaction guaranteed.

## Stainless Steel Archwires (SS)

- Stainless steel archwires are manufactured with the highest quality medical grade type 304v stainless steel. These wires have an extremely high tensile strength and accept intricate bends without breaking.
- High luster polish for reduced friction

Rectangle	Upper	Lower

## Thermal Active Niti Archwire (SM)

- Thermal active Niti archwires is provided in the martensitic or soft and pliable state and becomes super elastic once it reaches the transformation temperature of 90°F/32°C and becomes activated or austenitic. It provides gentle, lower force levels and a smooth, bright finish.
- The extreme pliability of our thermal active Niti archwires offers easy ligation and therefore larger sizes wires can be introduced at earlier phases in treatment without compromising patient comfort.

## Orthodontic Archwires

1. Normal Reverse Curve Archwires (RC01)
2. Straight Reverse Curve Archwires (RC02)

Release occlusion, which can not only avoid molars rotation, but also hold on the torque.
