# What is CQ?

Cultural Intelligence (CQ<sup>®</sup>) is a person's capability to function effectively in a variety of cultural contexts - both internationally and domestically.

In our own cultures, we usually have an idea of what is going on around us because we have a wealth of information, most of which subconscious, that helps us make sense of what we experience and observe. When we interact with individuals who have a different cultural background, the same cues may mean something entirely different.

## CQ CAPABILITIES

There are four primary CQ capabilities:

# CQ Profile

This page summarizes your scores for the four primary CQ capabilities. The graphs indicate the worldwide norms and show typical differences in the scores across the four capabilities. Note your self-ratings (in the squares).

<p><b>LOW</b></p> <p>Scores in this range are in the bottom 25% of worldwide norms.</p>	<p><b>MODERATE</b></p> <p>Scores in this range are in the middle 50% of worldwide norms.</p>	<p><b>HIGH</b></p> <p>Scores in this range are in the top 25% of worldwide norms.</p>

# Research Basis of CQ

## THE RESEARCH BASIS FOR ASSESSING CULTURAL INTELLIGENCE

Cultural Intelligence is conceptualized as a multi-dimensional construct based on application of Robert Sternberg's integrative theoretical framework of different "loci" of intelligence. The dimensions of Cultural Intelligence represent qualitatively different aspects of the overall capability to function and manage effectively in culturally diverse settings.

### CULTURAL INTELLIGENCE IS ...

Cultural Intelligence is a malleable capability that can be enhanced by multicultural experiences, training and self-awareness programs, travel and education.

- Cultural Intelligence is distinct from stable individual differences such as personality, which describe what a person typically does across time and across situations.
- Cultural Intelligence is also different from emotional intelligence because it focuses specifically on capabilities in multicultural contexts.

Cultural Intelligence has predictive validity over and above demographic characteristics, personality, general mental ability, emotional intelligence, cross-cultural adaptability inventory, rhetorical sensitivity, cross-cultural experience, and social desirability.

The Cultural Intelligence Scale has excellent psychometric properties.

- Published scholarly research demonstrates the factor structure of the scale is stable across samples, across time, and across cultures.
- In addition, self-rated scores are positively correlated with observer rated scores, and multi-trait multi-method analysis supports the convergent and discriminant validity of the scales.
- Reliabilities of the four factors and subdimensions exceed the standard cut-off of .70.

Most important, research demonstrates that cultural intelligence predicts adjustment, well-being, cultural judgment and decision-making, and task performance in culturally diverse settings.
