PRINT COLLECTION

BY SATELLIET

Printing fabric in a personally chosen colour or pattern

It is possible to print your own pattern or colour on 6 different fabrics. This is in line with the increasing demand for personalizing products. The desired colour can be obtained by specifying RAL colour number or a submitted colour sample. To have your own fabric printed, a seamless vector file pattern can be supplied from for example Shutterstock.com.

Fabric

BARRY	fabric with a fur look
BOWIE	soft mat velvet quality
CORD	mat velvet quality
CRYSTAL	shine velvet quality
GLITTER	woven fabric with gold lurex
EDEN	fabric with a woven look

Almost all fabrics can be provided with a dirt and water repellent finish. On request and from 100 meters the fabrics can be made fire-retardant at an additional cost. The minimum order is 40 meters. It is possible to print multiple patterns or uni colours on 1 roll to get to the required number of meters.

Method

Choose a fabric on which the pattern needs to be printed.

STEP 1

Deliver a RAL-number, a reference fabric or a seamless vector file.

STEP 2

An A4-size sample with pattern will be sent for approval.

STEP 3

SUSTAINABLE COLLECTION

BY SATELLIET

Sustainability is also increasingly taken into account in the origin of our fabrics. The beauty of this is that the opportunities related to sustainability present themselves in different ways. For instance recycling takes place before and after consumption and/or only uses raw materials that can later be reprocessed into raw materials. These three ways are known as Pre-consumer recycling, post-consumer recycling and Cradle 2 Cradle.

Pre-consumer recycling

Pre-consumer recycling is the recovery of waste materials generated during the production process or during the delivery of goods even before they were delivered to a consumer.

Pre-consumer recycled materials can be broken down and remade into similar or different materials. They can also be sold to external buyers who then use these materials for consumer products. For example, in fabric weaving. Fibres fall off the machine during weaving and are, instead of being discarded, spun into new yarns.

Post-consumer recycling PCR

Post-consumer recycled (PCR) products are made of waste materials that are created by the end user and can no longer be used. Worldwide, post-consumer waste is the biggest waste stream, more and more ways are being found to reduce this flow or be able to make it into new products. After usage, this waste is collected and recycled into a new product. Empty shampoo bottles, PET bottles and other waste materials can be recycled into completely new products such as furniture fabrics.

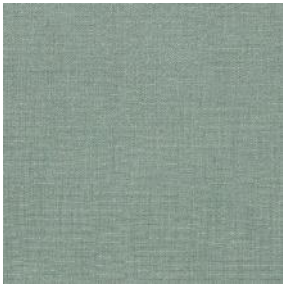

Cradle 2 Cradle (C2C)

The Cradle 2 Cradle principle is about preserving valuable raw materials based on the idea: raw materials remain raw materials. This means that all selected materials can after a period of use, can be reused in another product endlessly, without loss of quality. The concept is therefore not about striving for less bad, but to more good. This cyclical concept makes sure that raw materials are converted into safe materials that can be re-used time and time again. Everything is created as a raw material to be used for something else and in that way makes a positive contribution to the world and the future.

Glass table tops with a wooden or metal edge

These table tops are made with an MDF core and a tempered glass top which is provided with a (personalised) print. As the personalised print is fired on the underside of the glass it lasts longer. The tempered glass is heat treated. This gives the glass its special features and a permanent tension distribution. The glass is not harder, but stronger and safer. If broken, it breaks into tiny pieces instead of fragments. The glass is also extremely stain resistant. The edges can be finished with a metal edge or an oak edge that can be stained in any Satelliet colour, and with a metal edge insert for extra detail.
