

Clicfix™

The climbing wall with movable grips for elementary schools and daycare centres

ANOTHER WAY TO GET KIDS MOVING!

The introduction to rock climbing helps develop new skills and different ways of using the arms and legs to climb. It also creates interest in this new sport that will make its debut at the next Olympic Games.

Highlights

- High-density polyethylene (HDPE) modular panels make it easy to create a climbing wall that fits well into the space available.
- Clicfix™ climbing grips come in various shapes that can be repositioned, using an anti-theft key, to keep the layout challenging.
- Engravings on the panels represent various themes (waves, mountains, nature, etc.).
- 3" thick folding landing mats available (ask for product S-5002).

COLOURS AVAILABLE

Three-layer lamination with a contrasting colour in the centre.
