Parking Lot Management

Dashboard Analytics

Parking Billing Management

Maintenance Management

Vehicle Data Management\*

Operations Management  
Customer & Business Services

\* AcuSeek is an intelligent search solution powered by large-scale AI models for vehicle information and records.

# Entrance & Exit Management

Seamless and secure access control for vehicles

Efficient license plate recognition and passage recording

Vehicle authentication and entry/exit rule management

Smooth, quiet and precise vehicle access control

Centralized records retrieval and fee management

Three recognition methods can be flexibly combined to suit different scenarios.

Entrance

Exit

## License plate-based access control

License plate recognition, vehicle information capture and recording

## Card-based access control

UHF Card recognition, access for authorized users only

## Ticket-based access control

Get Tickets through entrance controller for **temporary guests'** vehicle access

## Self-service payment

**Self-payment by cash and coins**  
Supports integration with third-party software, POS systems, and apps

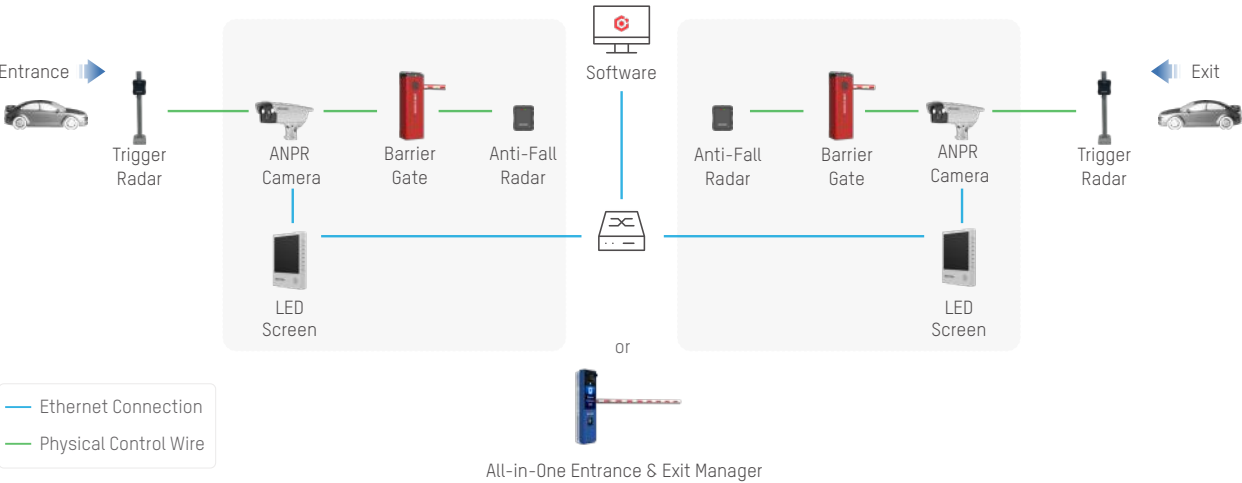

# ANPR-Based Vehicle Access Control Management

This system provides convenient, ticket-free vehicle access control that supports members, visitors, and different user types. It maintains complete vehicle access records with license plate numbers and displays space availability in real-time. The unified HCP management system offers integrated reporting for streamlined operations.

## Highlights

-  Accurate License Plate Recognition
-  Smooth, Efficient Traffic Flow
-  Visual Traffic Monitoring
-  Convenient Centralized Management

## System Topology

# Card-Based Vehicle Access Control Management

The card-based system ensures reliable, convenient, contactless access via UHF cards and stickers, supporting both registered and temporary vehicle management. It integrates UHF cards, IC cards, and optional license plate cameras under the unified HCP system with integrated data reporting for streamlined operations.

## Highlights

-  Contactless Card Recognition
-  Enhanced Security through Authorization Management
-  Stable Recognition for Efficient Traffic Flow
-  Convenient Centralized Management

# Parking Payment Management

Flexible payment options for different user permissions

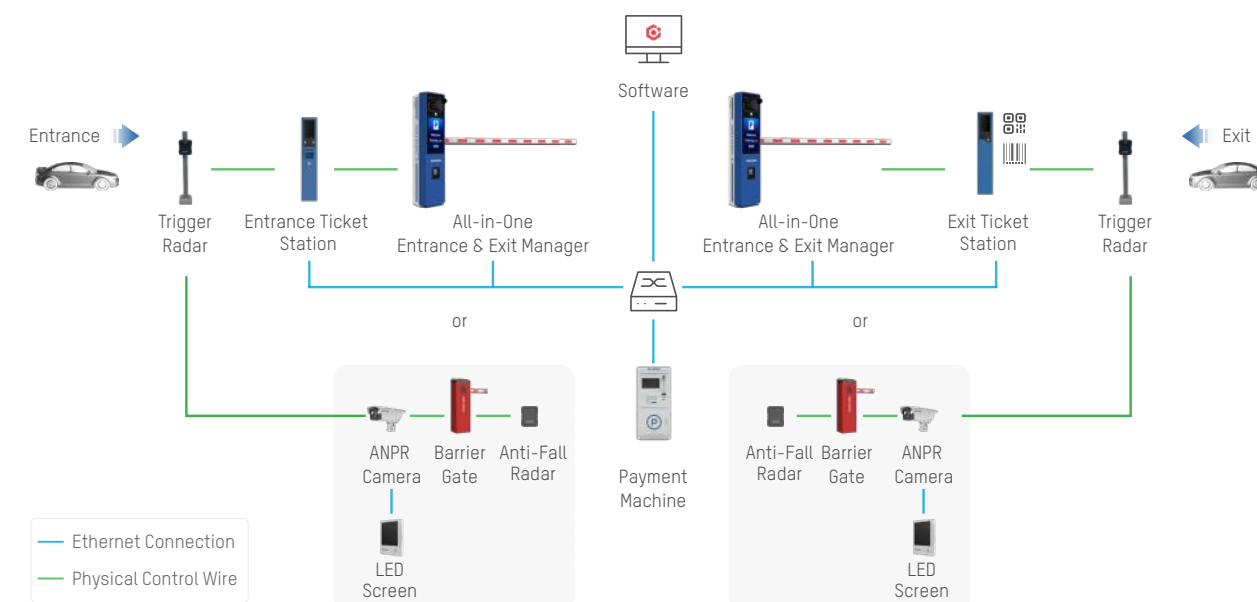

## Convenient Self-Service Payment

This solution offers flexible parking fees for registered, temporary, and visitor vehicles with payment options like exit booths, prepay stations, and account deductions. It offers customizable billing and discount rules, payment record searches, and reports. The centralized platform manages billing rules and visual revenue data to improve analysis and minimize losses.

# Indoor Parking Guidance

Park faster, park smarter

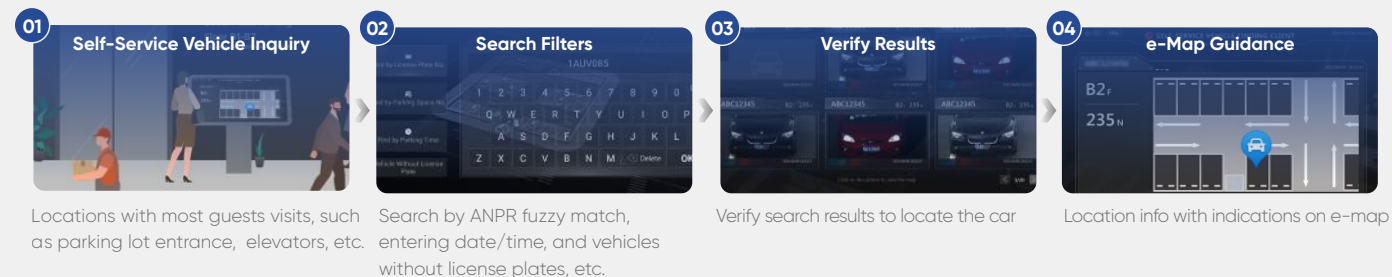

## Drivers Arrival:

Quickly find vacant parking space

## Drivers Departure:

Quickly find vehicle parking location

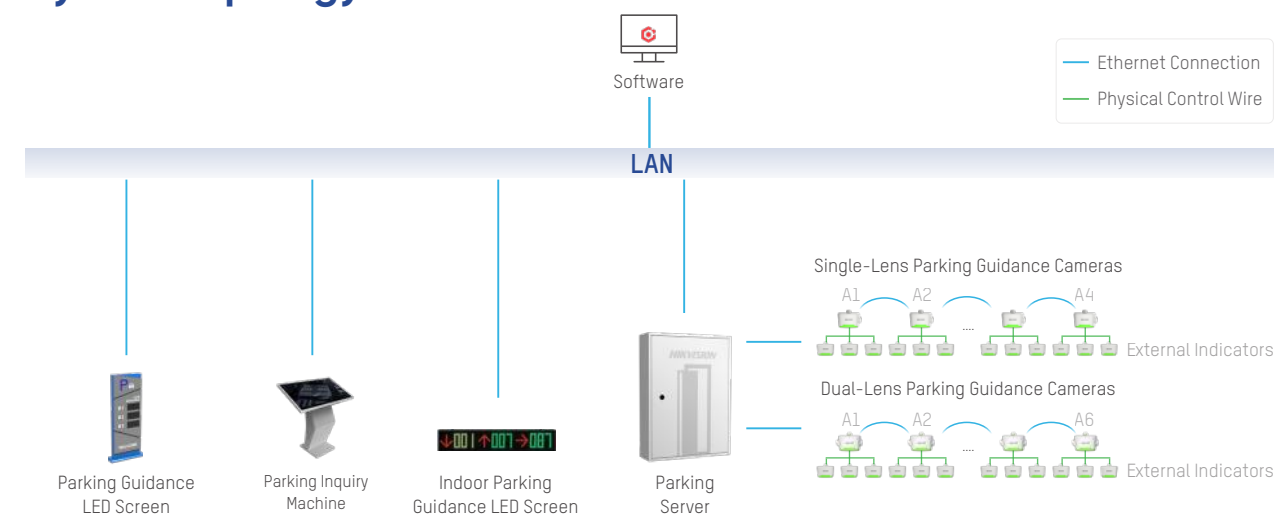

# ANPR-Based Parking Guidance and Car Finding

The system displays real-time space availability and directions by area or space type while enabling remote parking lot management through e-maps and video verification. It maintains video-based parking records searchable by space or license plate and supports registered, reserved, and special parking spaces. The platform provides detailed parking management with various space types, reserved space configuration, and alerts for wrong parking or overtime violations.

## Highlights

- Real-Time Parking Space Status Detection
- Available Space Guidance and Anti-Occupation Alerts
- Self-Service Car Location Services
- Centralized Parking Management

## System Topology

# Video-Based Parking Guidance

This solution uses built-in deep learning algorithms for parking space detection with motion detection and smart analysis features. It provides high-definition imaging with excellent low-light performance and vivid colors, displaying real-time space availability and directional guidance organized by area or space type.

## Highlights

-  Ultra-Wide-Angle Panoramic Monitoring
-  Parking Space Status Detection and Guidance
-  Multi-Scenario Adaptability
-  Centralized Parking Management

# Multi-Floor Parking Space Counting

The system provides designated area parking space counting and available space displays using visual multi-floor zone-based counting. This approach eliminates counting errors from floor transitions found in traditional solutions, ensuring precise parking space management across multiple levels.

## Highlights

-  Real-Time Multi-Floor Monitoring
-  Smart Available Space Guidance
-  Reduced Congestion and Wait Time
-  Centralized Parking Management

# On-Street Parking Guidance

Simplify urban parking for hassle-free street stops

## On-Street Parking ANPR Bullet Camera

Using advanced image recognition to deliver accurate parking information, reduce manual work, and enhance drivers' self-service experience. Video records capture license plates, entry/exit times, images, and videos—greatly improving parking efficiency.

Single-row parking

Double-row and 90-degree perpendicular parking

## On-Street ANPR Pole

Combined with a bullet camera, it covers blind spots and supports vehicle entry/exit detection through license plate recognition. It distinguishes electric vehicles by plate color and connects with parking locks to manage spaces reserved for electric vehicles.

Single-row and 90-degree perpendicular parking

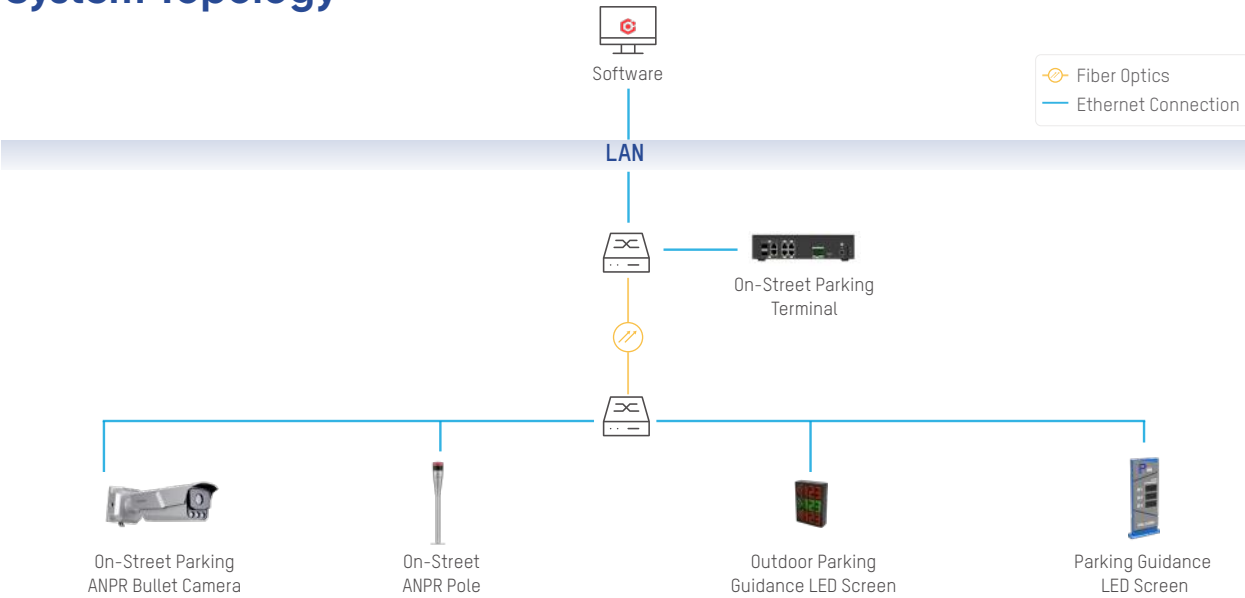

# ANPR-Based On-Street Parking Guidance

This solution improves parking efficiency and user experience through visual guidance and vehicle location services. It records parking time, license plates, space numbers, and vehicle occupancy data, uploading everything to the HikCentral Professional platform. The system manages overtime parking using data-driven traffic and space statistics while providing comprehensive parking management with real-time monitoring, incident video evidence, and detailed reporting.

## Highlights

- Smart License Plate Recognition
- Complete Parking Process Video Recording
- Real-Time Parking Space Monitoring and Guidance
- Centralized Parking Management

# Open-Air Parking Guidance

Simplify urban parking for hassle-free street stops

## Parking Space Detection Camera

High-mounted installation in parking lots

- Real-time detection of parking space status
- Dynamic display of space availability
- Comprehensive parking lot monitoring

Entrance and exit installation

- Vehicle entry/exit counting
- Real-time passage recording

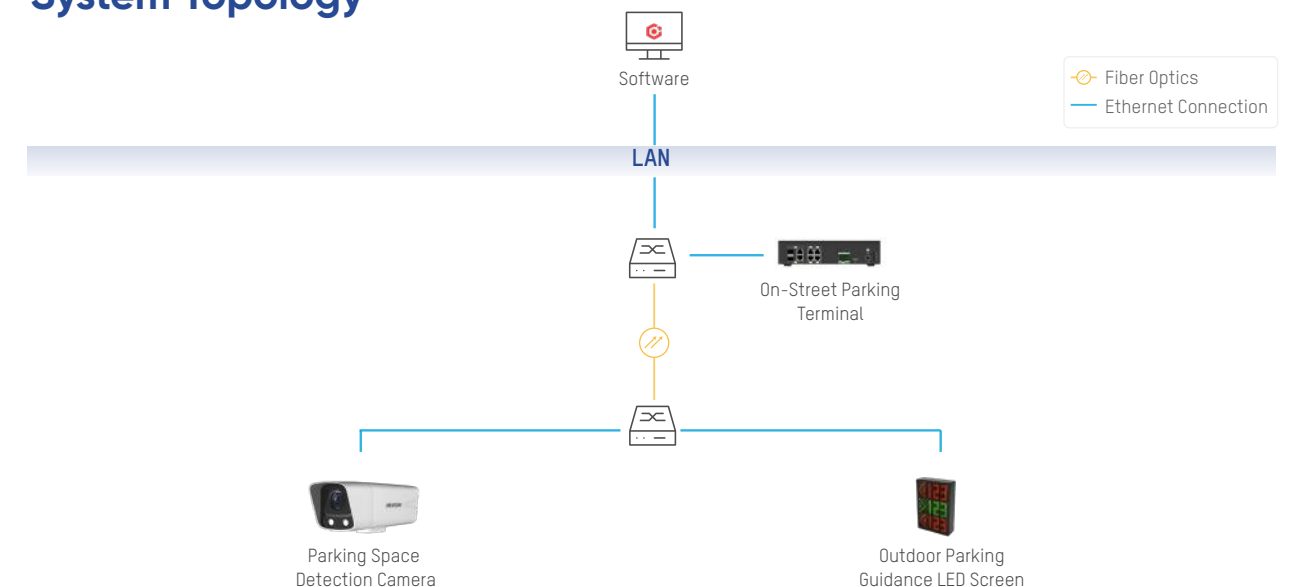

# Parking Space Status Detection and Display

The system offers two detection methods for different scenarios: parking lot space status detection and display, and entry/exit vehicle counting. It detects parking space availability and records all information, uploading the data to the HikCentral Professional platform for comprehensive management and analysis.

## Highlights

- Vehicle Entry/Exit Counting with Direction Detection
- Parking Space Status Detection and Display
- Real-Time Video Monitoring Management
- Centralized Parking Management

## System Topology

## Recommend Products

### Parking Space Detection Camera

IDS-TCR204-E

- Coverage: recommended for 15 parking spaces (actual detection may vary by installation conditions)
- Parking space availability monitoring in designated areas, vehicle counting for entry/exit

### Outdoor Parking Guidance LED Screen

DS-TVL22X-2-10P X=1,2,3

- P10 pixel pitch
- Support 3 colors
- Outdoor parking guidance and space availability display

# HikCentral Professional Parking Lot Management

HIKVISION

The HCP-powered parking solution guides drivers to available spaces quickly, streamlines querying and billing processes, helps optimize operations, and provides additional security layers.

## Entry & Exit Management

ANPR-enabled non-stop passage with flexible access rules for enhanced traffic efficiency and security

## Parking Guidance

Help drivers quickly find vacant spaces with guidance screens and parking cameras in both indoor and outdoor lots

## Parking Query and Charging

Self-service parking queries and multiple billing options further improve customer experience

## Operation Analysis

Help management analyze operations, income, and expenses with comprehensive operational and transaction data

## HikCentral Professional Parking Lot Management Overview

### Vehicle Authentication

Multiple authentication options for different scenarios

### Entry & Exit Rules

Flexible vehicle entry/exit management for permissions, vehicle types, etc.

### Vehicle Records

Vehicle record queries using license plates, dates, times, etc. for efficient management

### Parking Fee Management

Flexible billing methods: per session, hourly, time-based periods, with maximum charge limits

### Differentiated Discount Rules

Support for percentage discounts, amount discounts, time period discounts (entry/exit deduction), and full exemptions

### Payment Record Search

Search payment records, coupon usage, account top-ups, and shift handover records

### Parking Lot Management

Support for parking space management across floors and different space type configurations

### Self-Service Car Finding and Route Guidance

Support for fuzzy license plate, parking space, and entry time searches to locate vehicles with route planning guidance

### Parking Space Monitoring

Support for parking space status and video monitoring, abnormal space status display (overtime parking, wrong parking), etc.
