

Towards the Cybereconomy

Web 1.0	Read
Web 2.0	Read / Write
Web 3.0	Read / Write / Own

Software 1.0	Explicit code
Software 2.0	Optimization function
Software 3.0	Goal setting

- creates optimal path

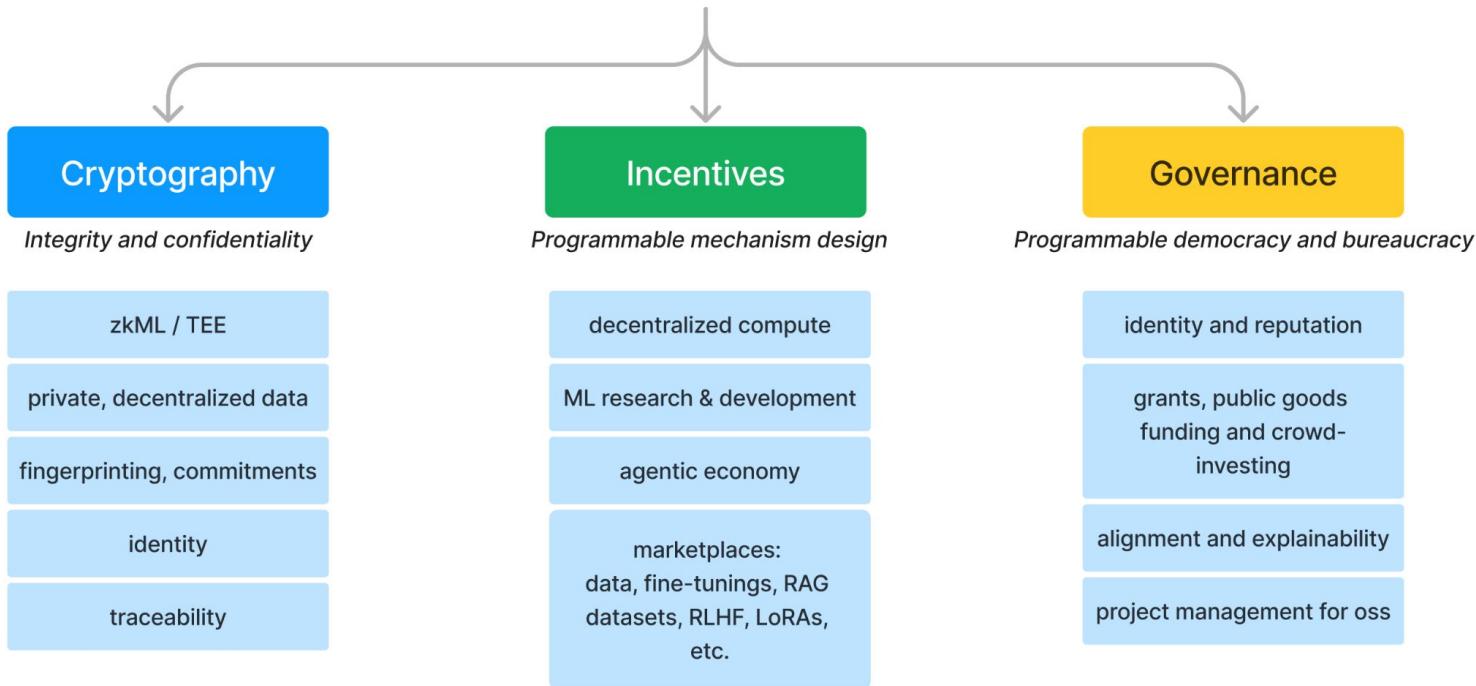

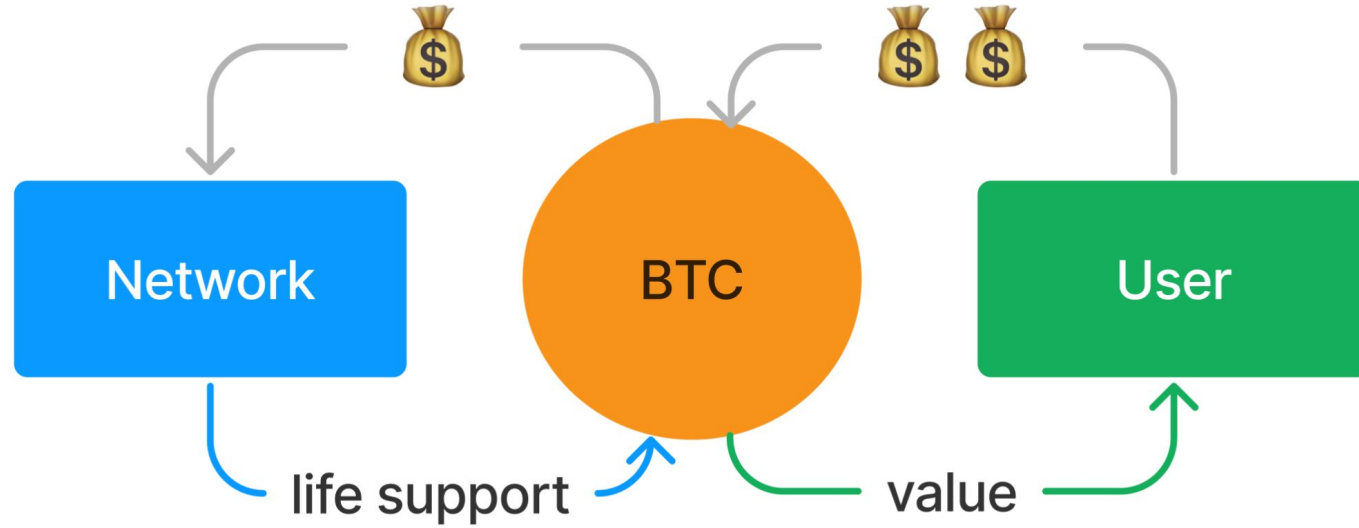

Centralized A(G)I

1. Centralization of power
2. Governance by a few
3. Centralization of infrastructure
4. Data lock-in
5. Regulatory capture
6. Lack of privacy
7. Pace of Innovation
8. AI Safety

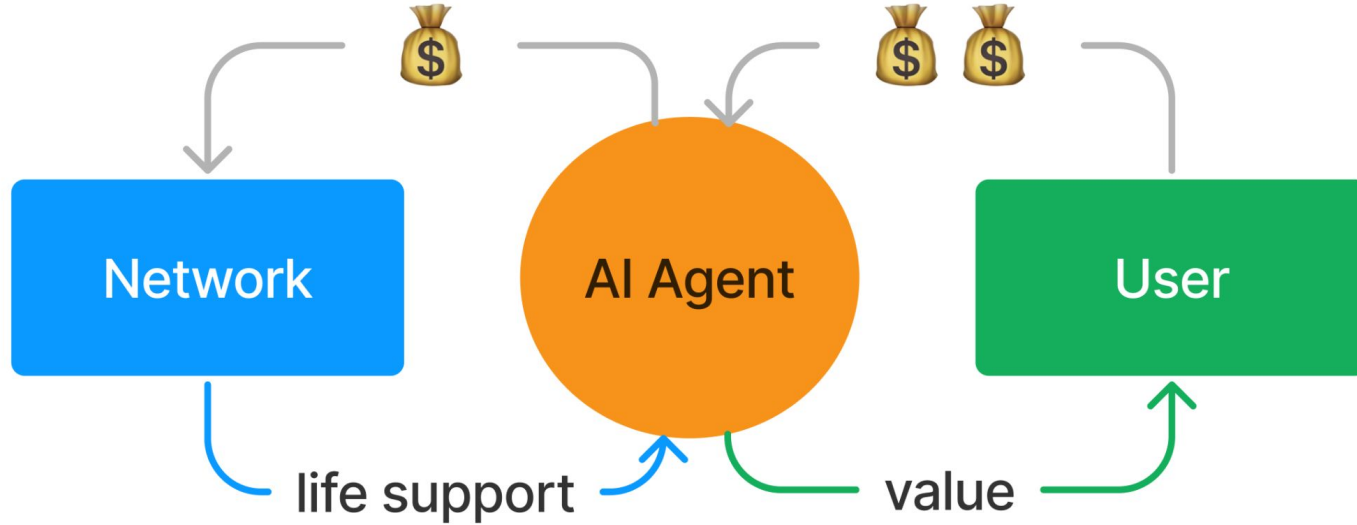

Decentralized AI

Why AI needs crypto?

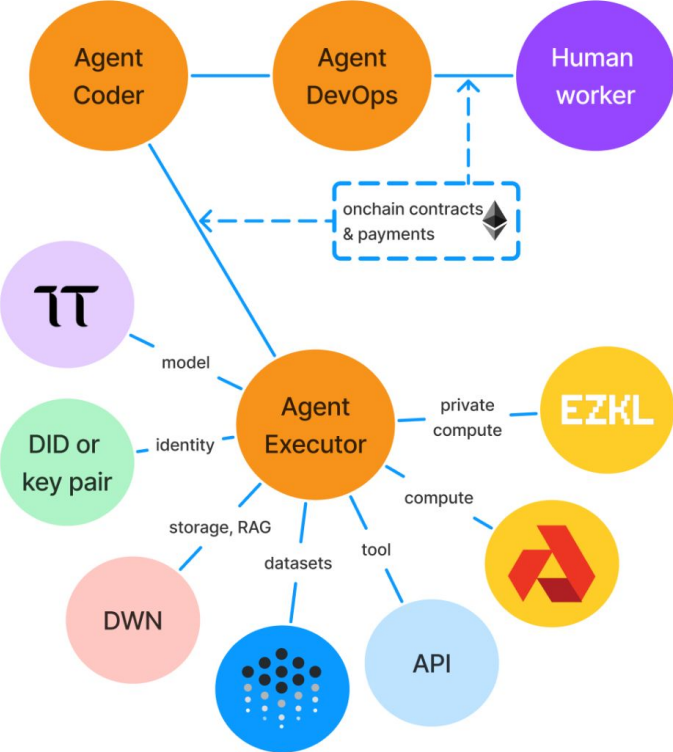

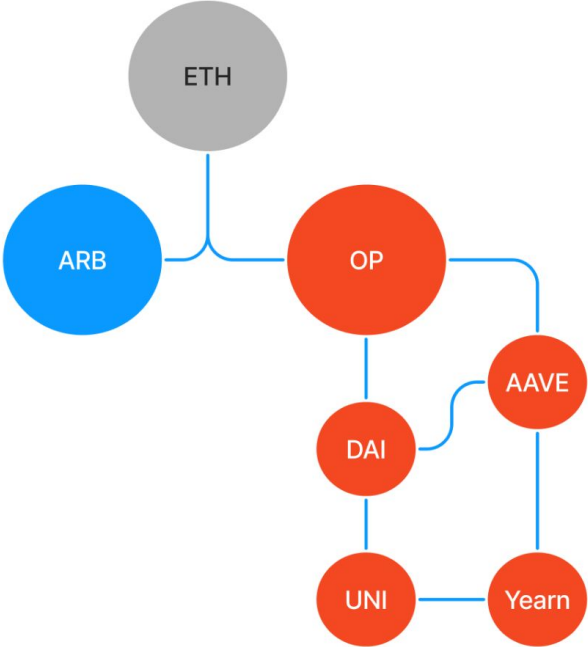

- *proposing, block building, validating*
- *hashing (mining)*

- tools & APIs
- training datasets
- NN architectures
- fine-tunings
- RAG datasets
- compute
- data storage
- models

Collaborative model development

Countries

Verticals

Communities

Experts

Via pre-train, RAG, SDG, scraping, fine-tune

Private AI

TEE

zkML

FHE

Incentives design

Co-ownership

Staking/slashing

Game-theoretic equilibrium

“OpenAI in Open Source”

Marketplaces

Data

Compute

Models

Tools

Routing, Orchestration, Communication

Infrastructure (local, web2, web3)

Models

Agents

Agent parameters

Payments

Human to agent

Agent to agent

Agent to human

Identity

Deepfakes

Agent reputation

Governance

Not building decentralized AI means **surrendering
the way we think, act and live.**
