Mizar online tools

IT

EN

The Mizar website is not just an online catalog, but a real professional tool designed to support architects, lighting designers, planners, and installers at every stage of their work. Every project is a vision to be realized: Mizar is at your side to illuminate it, step by step.

Browsing mizar.it means accessing a tool designed to simplify every stage of product research and selection. Thanks to advanced search, Thanks to advanced search functions, users can filter by key parameters such as type, application, light source, and degree of protection. This makes it easy to find the solution best suited to your design needs, saving time and optimizing results.

Once you have identified the type of device, you can proceed with customization using the configurator, a simple and intuitive tool that allows you to quickly define the product specifications and generate the correct code to access the relevant product sheet.

Within the sheet, you will find all the technical materials necessary for design available for download: images, technical drawings, 3D models, .IES files for lighting simulations, assembly instructions, certifications, and much more.

The brand

ReeR SpA, which has been operating in the field of security technology and lighting since 1959, acquired Mizar in 2020, an Italian brand that has been a leader in lighting design for the last few decades. Today, Mizar is embarking on a new path of developing Made in Italy products, focusing on the production of luminaires for those types of applications where the fixture quality is a fundamental requirement in the architectural project. Present in all industrialized countries, our company boasts a solid distribution and service network, guaranteeing our customers efficient and effective support.

mizar

Proprietary internal electronics

To correctly manage the single power LEDs and micro-drivers contained in most devices, specific original Mizar printed circuit boards have been designed and manufactured. Each PCB is configured to ensure control and efficiency of the electronic components in extreme environmental conditions such as temperature changes and water pressure. The in-house design and production of PCBs gives us great flexibility during product development and the freedom to test the latest technological innovations in advance, ensuring we are always at the forefront of the field of electronic components.

Quality control

All our products are subject to strict controls by our Quality Control staff. The products are inspected to ensure that they meet the compliance requirements imposed by current regulations and fall within the parameters of excellence indicated by internal guidelines. In this way, every product that leaves the production plant will reach the customer at the peak of its technical and aesthetic capabilities.

Aluminum processing and laser marking

At the Mizar plant, we have state-of-the-art machinery and highly skilled labor to process aluminum bars and laser mark products. This gives us full control over production and the specifications of each piece, ensuring precision, quality, and customization at every stage of the process.

R&D and prototyping

Mizar products are designed and manufactured following a tailor-made process, where every detail is carefully studied to combine design and functionality. Thanks to our Design Office, we offer the possibility to create special projects, making modifications to existing models or developing and prototyping custom-made equipment, designed to perfectly complement the customer's project.

Certifications

ReeR is a company that stands out for its commitment to quality and sustainability. It has obtained EN ISO 9001 certification, which attests to the effectiveness of its quality management system. It is also EN ISO 45001:2018 certified, guaranteeing high standards of occupational safety, and EN ISO 14001:2015 certified, demonstrating its commitment to the environment. ReeR also follows the RoHS directive, which ensures compliance with the requirements for the restriction of hazardous substances in electronic devices. These certifications reflect the company's responsible and quality-oriented approach.

IdroSkud® technology

The IdroSkud® system is an exclusive Mizar project developed to eliminate the risks of incorrect wiring and protect the electronic components of the device from:

- Polarity reversal
- Voltage spikes
- Water infiltration

An additional guarantee of the functionality of the product even in extreme environmental conditions.

Materials and finishes

Mizar manufactures its products with the utmost care, paying particular attention to both the choice of materials and the manufacturing techniques used. Each component is selected to ensure high performance, durability, and reliability over time. Most of the devices are made starting from the modeling of the body using the technique of turning from solid, a process that allows for the creation of mechanically more resistant and structurally more stable elements. This production method, in addition to providing solidity, significantly improves the capacity for heat dissipation, contributing to the optimal maintenance of performance even after prolonged use. Thanks to these design and production choices, Mizar products stand out for their high efficiency, which remains constant over time, and for a build quality that reflects the company's commitment to excellence and innovation.

Corrosion categories for outdoor environments

ISO 9223:2012 has defined a system for classifying atmospheric corrosion of metals and alloys in various environmental conditions. This standard indicates corrosion classes based on observed corrosion rates, in standardized samples, exposed to these environments for one year. Additionally, it provides dose-response functions to estimate the corrosivity level, determined by the normalized annual metal loss due to atmospheric agents. This approach allows predicting the highest possible corrosion class, considering local environmental factors, including the interaction of temperature, humidity, sulfur dioxide

pollution, and salinity. However, it's essential to note that the standard doesn't account for other significant elements such as wind speed, sand abrasion, accidental breakdown of protective layers, maintenance frequency, and exposure levels.

Corrosion category	Corrosion level	Environments
C1	Very low	Dry or cold zone, atmospheric environment with very low pollution and time of wetness, e.g. certain deserts, Central Arctic/Antarctica.
C2	Low	Temperate zone, atmospheric environment with low pollution (SO2: < 5 µg/m³), e.g. rural areas, small towns. Dry or cold zone, atmospheric environment with short time of wetness, e.g. deserts, subarctic areas.
C3	Medium	Temperate zone, atmospheric environment with medium pollution (SO2: 5 µg/m³ to 30 µg/m³) or some effect of chlorides, e.g. urban areas, coastal areas with low deposition of chlorides. Subtropical and tropical zone, atmosphere with low pollution.
C4	High	Temperate zone, atmospheric environment with high pollution (SO2: 30 µg/m³ to 90 µg/m³) or substantial effect of chlorides, e.g. polluted urban areas, industrial areas, coastal areas without spray of salt water or, exposure to strong effect of de-icing salts. Subtropical and tropical zone, atmosphere with medium pollution.
C5	Very high	Temperate and subtropical zone, atmospheric environment with very high pollution (SO2: 90 µg/m³ to 250 µg/m³) and/or significant effect of chlorides, e.g. industrial areas, coastal areas, sheltered positions on coastline.
CX	Extreme	Subtropical and tropical zone (very high humidity period), atmospheric environment with very high SO2 pollution (above 250 µg/m³) including accompanying and production factors and the strong effect of chlorides, e.g., extreme industrial areas, coastal and oshore locations, and occasional contact with salt spray. Category CX is to be considered for extreme situations where the corrosion rates exceed the upper limits in category C5. Indeed, CX refers to specific marine and marine/industrial environments, such as bridges.

* SO2: Sulphur dioxide (not sodium chloride)

Mizar use the standard defined by EN ISO 9227:2017, to test its products and processes. We implement a pre-treatment process to produce high-quality coating, ensuring excellent paint adhesion and optimal corrosion protection through the use of chemicals specifically dedicated to aluminum.

Mizar also uses EN ISO 12944:2018 to validate its processes for an exposure time over 1500 hours at a constant temperature. All our painted products pass this testing standard. The results are subsequently classified to comply with EN ISO 9223:2012 (as mentioned in the previously indicated table).

In a second step , the luminaire is tested in a sodium chloride atmospheric chamber. This test allows us to monitor the corrosion behavior of the complete product, checking in detail:

- The quality of the paint
- The sensibility of the design
- The behaviour of stainless-steel screws and the aluminium quality

C5

Urban or industrial areas
Every outdoor Mizar product is compliant.

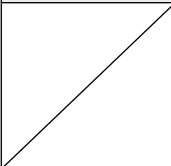

CX

Bridges or marine environments
Only outdoor Mizar products, with exposed surface completely made of stainless steel / brass / glass / technopolymer , are compliant.

Symbols legend

 Degrees of protection against mechanical impacts	
01	Protected against an impact energy of 0,15J
02	Protected against an impact energy of 0,2J
03	Protected against an impact energy of 0,35J
04	Protected against an impact energy of 0,5J
05	Protected against an impact energy of 0,7J
06	Protected against an impact energy of 1J
07	Protected against an impact energy of 2J
08	Protected against an impact energy of 5J
09	Protected against an impact energy of 10J
10	Protected against an impact energy of 20J

Protection against the risk of electric shock		
	Class 0	Protection against electric shock relies on basic insulation only. No protective earth connection.
	Class I	Relies on basic insulation for live parts and an earth connection to exposed conductive parts. The earth connection provides protection if the basic insulation fails.
	Class II	Uses supplementary insulation (double insulation) and does not provide for an earth connection. The extra layer of insulation protects the user if the basic insulation fails.
	Class III	Operates at a Safety Extra-Low Voltage (SELV) (usually below 50V AC or 120V DC) and does not depend on an earth connection for safety. The low voltage level itself ensures safety, with power provided by batteries or a suitable transformer.

 Solid particle protection	
IP0X	No protection against ingress of objects
IP1X	Protected against solid objects larger than 50 mm
IP2X	Protected against solid objects larger than 12 mm
IP3X	Protected against penetration by a probe with a diameter of 2,5 mm
IP4X	Protected against penetration by a probe with a diameter of 1 mm
IP5X	Protected against dust ingress (is not entirely prevented)
IP6X	Dustproof
Liquid ingress protection	
IPX0	No protection against ingress of water
IPX1	Protected against vertically falling water drops
IPX2	Protected against falling water drops with the container tilted at a maximum angle of 15°
IPX3	Protected against rain
IPX4	Protected against splashing water
IPX5	Protected against water jets (12,5 liters per minute, pressure 30 kPa at a distance of 3 m)
IPX6	Protected against waves (100 liters per minute, pressure 100 kPa at a distance of 3 m)
IPX7	Protected against temporary immersion (30 minutes up to 1 m)
IPX8	Protected against permanent immersion (typically 24 hours, at a depth greater than 1 m, typically over 3 m)

Oceano

[o'tɛ:a:no]

OCEANO is the versatile solution designed to integrate elegantly into any architectural context. Available in different shapes and sizes, it offers versatile solutions thanks to its floor, wall, or ceiling installation options. Resistant materials and refined finishes guarantee extreme durability and unmistakable style, while customizable optics and color temperatures allow maximum design freedom. Top of the range for sophisticated, reliable lighting that is always aligned with the needs of the project.

mizar

Oceano / Product features

Construction quality as the first goal

At Mizar we think that one of the first features of a “Made in Italy” product is excellent build quality. OCEANOs are turned from solid, 20µm neutral anodized 6082 anticorrosion aluminum or 316L stainless steel. The bezels are manufactured in the same materials. Versions with marine brass bezels are available. The diffuser is made of extra-clear tempered glass. TIR optics are made of technopolymer.

Corrosion resistance at the highest level

The care taken in the design and choice of materials makes it possible to achieve the highest classes of the international ISO 9223 standard. All OCEANOs made of anodized aluminum are rated C5 (“Very High”). All OCEANOs made of stainless steel or brass are rated CX (“Extreme”).

Wood effect

Made from an innovative polymer resin, OCEANO perfectly mimics the color and grain of wood, making it an ideal choice for installations on wood surfaces. Whether enhancing outdoor landscapes, or even the teak-clad decks of luxury yachts, OCEANO is designed to disappear into its surroundings while offering extraordinary corrosion resistance.

Designed to be drive-over

Models OCEANO 3.2, 3.3, 4.2 and 4.3 are designed to be certified in driveway areas. Tested to withstand up to 20kN static load (2000kg), 5kN in acceleration and torsion (500 kg).

IdroSkud®

Innovative Mizar exclusive patent to protect electronic components from voltage spikes, polarity reversal, moisture or water infiltrations through the power cable.

Highest degrees of protection

OCEANOs are fully protected against entry of any kind of dust (IP 6X) and protected against permanent immersion to a depth of 3 meters (IP X8). Oceano 3 and Oceano 4 sizes are protected to a depth up to 10 meters. The products are also tested against high-pressure water jets (IP X6). 100 liters per minute, with a pressure of 100 kPa at a distance of 3 m.

Wide range of optics

All OCEANOs can be equipped with narrow, medium, wide or elliptical optics. Maximum design flexibility at the lighting level.

Grazing lighting effects

Oceano 9s are models equipped with optical silicone lens with grazing distribution, to illuminate paths and walkways or to create scenic effects on walls.

Oceano / Product features

Wide choice of color temperatures

The OCEANO series is offered with a wide choice of color temperatures: 2700K, 3000K and 4000K. In addition – upon request – versions with extremely warm color temperature (2200 K) are available.

RGBW dynamic scenarios

The OCEANO series, in addition to different color temperatures, in the OCEANO 4.0 and 4.1 models is available in versions equipped with RGBW sources, controlled in PWM.

Faithful reproduction of colors

OCEANO series products are equipped with a range of the highest quality LED light sources. Color rendering index (CRI) > 90. They also offer very high color consistency, with a Step MacAdam value of 2.

Special anodizations

The OCEANO series offers unparalleled customization.

Available – upon request – in 24 stunning new finishes, including bronze, chrome, and rose gold. All of these colors are achieved through an anodizing treatment and subsequent hand-brushing.

Vitrum

['vi:trum]

VITRUM is simplicity with style: a sophisticated, elegant, and durable flush-mounted fixture, designed to blend into the environment and leave space for light to be the sole protagonist. Thanks to its minimalist design, the quality of its construction materials, and the various optical solutions available, it is the ideal choice for projects that require discretion and refinement, enhancing every context with harmony.

mizar

Vitrum / Product features

Construction quality as the first goal

At Mizar we think that one of the first features of a “Made in Italy” product is an excellent build quality. VITRUMs are turned from solid, made of 20µm black anodized 6082 anticorodal aluminum and equipped with 8-10mm thick extra-clear tempered glass.

Corrosion resistance at the highest level

The care taken in the design and choice of materials makes it possible to achieve the highest classes of the international ISO 9223 standard. All VITRUMs are rated CX (“Extreme”).

A surprising robustness

The VITRUM range features a tempered glass diffuser 8 to 10 mm thick (depending on size). This peculiarity, not only characterizes it aesthetically, but also makes it certified as walk-over, up to 500kg of static load.

Highest degrees of protection

VITRUMs are fully protected against entry of any kind of dust (IP 6X) and protected against permanent immersion to a depth of 3 meters (IP X8). The products are also tested against high-pressure water jets (IP X6). 100 liters per minute, with a pressure of 100 kPa, at a distance of 3 m.

IdroSkud®

Innovative Mizar exclusive patent to protect electronic components from voltage spikes, polarity reversal, moisture or water infiltrations through the power cable.

Versions with “direct-view” opal diffuser

VITRUM has the option of being equipped with an opal glass to create diffused light and have maximum visual comfort. The VITRUM 1.1, VITRUM 2.1 and VITRUM 3.1 models have this feature.

Wide range of optics

All VITRUMs can be equipped with narrow, medium, wide or elliptical optics. Offering maximum design flexibility at the lighting level.

Wide choice of color temperatures

The series is offered with a wide choice of color temperatures: 2700K, 3000K and 4000K. In addition – upon request – versions with extremely warm color temperature (2200K) are available.

Acus

['a:kus]

ACUS, the family of robust, in-ground recessed luminaires with a minimalist design, ideal for driveways and pedestrian areas. Thanks to the elegant finishes in micro-blasted stainless steel and tempered glass, it guarantees maximum durability and resistance to stress. Available with narrow, medium, wide, symmetrical and tiltable optics, it offers great design flexibility. It also offers a surprising dynamic RGBW version, perfect for enhancing urban spaces with colorful and surprising atmospheres.

Acus / Product features

Construction quality as the first goal

At MIZAR we believe that one of the first features of a "Made in Italy" product is excellent build quality. The ACUS bezel is made of highly abrasion-resistant micro-bead-blasted 316L stainless steel, with a 12 mm thick extra-clear tempered glass diffuser. The body is made of 20µm black anodised 6082 anticorodal aluminium. The product is supplied with a nickel-plated brass quick connector.

Corrosion resistance at the highest level

The care taken in the design and choice of materials allows the highest classes of the international ISO 9223 standard to be achieved. All ACUS are classified CX ("Extreme").

Designed to be drive-over

ACUS are products designed to be certified in driveway areas. Tested to withstand up to 20 kN static load (2000 kg), 5kN in acceleration and torsion (500 kg).

Highest degrees of protection

ACUS are fully protected against the ingress of any kind of dust (IP 6X) and protected against temporary immersion – up to 30 minutes – to a depth of 1 meter (IP X7). The products are also tested against high-pressure water jets (IP X6). 100 liters per minute, at a pressure of 100 kPa at a distance of 3 m.

IdroSkud®

Innovative Mizar exclusive patent to protect electronic components from voltage spikes, polarity reversal, moisture or water infiltrations through the power cable.

Wide range of optics

All ACUS can be equipped with narrow, medium or wide optics. Offering maximum flexibility in lighting design. The range also offers a choice of technopolymer TIR lenses (ACUS 1.0, 1.2, 1.3 and 2.0), fresnel or aluminised reflectors (ACUS 1.1).

Maximum flexibility in aiming

ACUS 2.0 versions are equipped with tilting optics. By acting on the lower part of the product body, without opening it, aiming can be oriented. This allows immediate adjustment of the optics, on any axis of the product.

Wide choice of color temperatures and RGBW dynamic scenarios

The ACUS series is offered with a wide choice of color temperatures: 2700K, 3000K and 4000K. As the ACUS is designed to illuminate façades, as well as in different colour temperatures, it is also offered in a colour-changing version, to create lively and dynamic scenarios. The ACUS 1.3 is equipped with RGBW sources, controlled by PWM (or DMX on request).

Lineo

[ˈli:ne:ɔ]

LINEO the iconic linear recessed fixture with a strong visual impact, designed to define paths and spaces with continuous lighting. Visual comfort is guaranteed thanks to its diffuse PMMA optics integrated into the profile, which ensures the perfect combination of light and architecture, adding charm to walkways, flowerbeds and facades. Drive-over, modular and dimmable, also available with an RGBW source, it flexibly adapts to both public and private contexts.

mizar

Lineo / Product features

Construction quality as the first goal

At MIZAR, we believe that one of the first characteristics of a "Made in Italy" product is excellent build quality. The body of the LINEO is created with a double PMMA extrusion, which allows the opal diffuser and the transparent body to be integrated in a single block. This makes the product extremely resistant, IK10 and drive-over up to 2000kg.

Corrosion resistance at the highest level

The care taken in the design and choice of materials makes it possible to achieve the highest classes of the international ISO 9223 standard. All LINEO models are rated CX ("Extreme").

Designed to be drive-over

The LINEO is a product designed to be certified in driveway areas. Tested to withstand up to 20 kN static load (2000 kg), 5kN in acceleration and torsion (500 kg).

Limitless modularity

LINEO is a product designed to be installed in a continuous, seamless line. The series is complete with modular outercases, both for installation on the ground and on plasterboard. Accessories for continuous line wiring, such as extension cables and splitters, are also provided.

IdroSkud®

Innovative Mizar exclusive patent to protect electronic components from voltage spikes, polarity reversal, moisture or water infiltrations through the power cable.

Highest degrees of protection

LINEO are fully protected against the ingress of any kind of dust (IP 6X) and protected against temporary immersion – up to 30 minutes – to a depth of 1 metre (IP X7). The products are also tested against high-pressure water jets (IP X6). 100 litres per minute, at a pressure of 100 kPa, at a distance of 3 m.

Perfect light uniformity

The opal PMMA diffuser allows for maximum homogeneity of light distribution, also making the LINEO body itself perfectly backlit, with no visible shadows.

Wide choice of color temperatures and RGBW dynamic scenarios

The LINEO series is offered with different color temperatures: 2700, 3000 and 4000 Kelvin. In addition – very warm color temperature versions 2200 K are available upon request.

The LINEO design is well suited for decorative and modular installations. LINEO 2.0, 2.1 and 2.2 are equipped with RGBW sources, controlled in PWM.

Egeo

[e'dʒɛ:ɔ]

EGEO is the range of floodlights specifically designed to elegantly and reliably illuminate extreme environments, such as coastlines, fountains, or underwater spaces. Crafted with high-quality Italian-made materials such as anodized aluminum and stainless steel, they are resistant to corrosive agents and permanent immersion up to 10 meters.

Available in four sizes, they offer a wide range of optics, color temperatures and accessories for designing and shaping the light, also available in RGBW for memorable dynamic scenarios.

mizar

Egeo / Product features

Construction quality as the first goal

At MIZAR we believe that one of the first characteristics of a "Made in Italy" product is an excellent build quality. EGEOs are turned from solid, 20µm neutral anodised 6082 anticorrosional aluminium or 316L stainless steel.

Corrosion resistance at the highest level

The care taken in the design and choice of materials enables the highest classes of the international ISO 9223 standard to be achieved. All EGEO floodlights, made of anodized aluminum, are rated C5 ("Very High"). All EGEO floodlights, made of stainless steel, are rated CX ("Extreme").

Highest degrees of protection

The EGEOs are fully protected against the ingress of any kind of dust (IP 6X) and protected against permanent immersion to a depth of 3 metres (IP X8). The Egeo 3 and Egeo 4 sizes are protected up to a depth of 10 meters. The products are also tested against high-pressure water jets (IP X6). 100 litres per minute, at a pressure of 100 kPa, at a distance of 3 meters.

Faithful reproduction of colors

The EGEO series products are equipped with a range of top-quality LED light sources. Colour rendering index (CRI) > 90. They also offer excellent colour temperature consistency, with a Step MacAdam 2 value.

IdroSkud®

Innovative Mizar exclusive patent to protect electronic components from voltage spikes, polarity reversal, moisture or water infiltrations through the power cable.

Wide range of optics

All EGEOs can be equipped with narrow, medium, wide or elliptical optics. Maximum lighting design flexibility.

Wide choice of color temperatures

The EGEO series is offered with a wide choice of color temperatures: 2700K, 3000K and 4000K. In addition – upon request – versions with extremely warm color temperature (2200 K) are available.

RGBW dynamic scenarios

The EGEO series, in addition to different color temperatures, in the Egeo 4 models is available in versions equipped with RGBW sources, controlled in PWM.

Flumen

['flu:men]

FLUMEN, a versatile product line designed to meet every lighting need. With a wide range of sizes and power options, FLUMEN allows you to customize its performance with external accessories, including visors and snoots. These accessories pair perfectly with four different TIR optics, offering endless possibilities to customize the light to your taste.

Flumen 3.0

mizar

Flumen / Product features

Construction quality as the first goal

At MIZAR we believe that one of the first characteristics of a “Made in Italy” product is an excellent build quality. FLUMEN are turned from solid, made of anodized anticorodal 6082 aluminum, and coated with a protective primer followed by epoxy polyester powder painting.

Corrosion resistance at the highest level

The care taken in the design and choice of materials enables the highest classes of the international ISO 9223 standard to be achieved. All FLUMENs are rated C5 (“Very High”).

Highest degrees of protection

The FLUMENs are fully protected against the ingress of any kind of dust (IP 6X) and protected against temporary immersion for up to 30 minutes at a depth of 1 meter (IP X7). The products are also tested against high-pressure water jets (IP X6). 100 litres per minute, at a pressure of 100 kPa, at a distance of 3 meters.

Faithful color reproduction

The FLUMENs series products are equipped with a range of top-quality LED light sources. Colour rendering index (CRI) > 90. They also offer excellent colour temperature consistency, with a Step MacAdam 2 value.

IdroSkud®

Innovative Mizar exclusive patent to protect electronic components from voltage spikes, polarity reversal, moisture or water infiltrations through the power cable.

Wide range of optics

All FLUMENs can be equipped with narrow, medium or wide optics. Maximum lighting design flexibility.

Wide choice of color temperatures

The FLUMEN series is offered with a wide choice of colour temperatures: 2700K, 3000K and 4000K. In addition – on request – versions with an extremely warm colour temperature (2200 K) are available.

The importance of visual comfort

All FLUMENs are designed with a lowered light source to reduce perceived glare. In addition, they can be configured by inserting optical optionals such as honeycomb for the highest level of visual comfort. The FLUMEN series can also be equipped with two different accessories, asymmetrical visors and telescopes, made of powder-coated sheet metal.

Elios

[ˈɛːljɔs]

ELIOS, the versatile floodlight designed to elevate your lighting projects. Available in a variety of elegant finishes, ELIOS offers powerful illumination, perfect for highlighting plants or architectural facades. With the option to choose between white light in different color temperatures or a dynamic RGBW emission, and a range of narrow to wide optics, ELIOS adapts perfectly to any design style.

Elios / Product features

Construction quality as the first goal

At MIZAR we believe that one of the first characteristics of a "Made in Italy" product is an excellent build quality. ELIOS are turned from solid, anodized Anticorodal 6082 aluminum and coated with a protective primer, followed by epoxy polyester powder painting. It is also available in a completely black anodised version, without powder coating.

Corrosion resistance at the highest level

The care taken in the design and choice of materials enables the highest classes of the international ISO 9223 standard to be achieved. All ELIOS floodlights, are rated C5 ("Very High").

Highest degrees of protection

ELIOS units are fully protected against the ingress of any type of dust (IP 6X) and are protected against temporary immersion for up to 30 minutes at a depth of 1 meter. The products are also tested against high-pressure water jets (IP X6). 100 litres per minute, at a pressure of 100 kPa at a distance of 3 meters.

Faithful reproduction of colors

The ELIOS series products are equipped with a range of top-quality LED light sources. Colour rendering index (CRI) > 90. They also offer excellent colour temperature consistency, with a Step MacAdam 3 value.

IdroSkud®

Innovative Mizar exclusive patent to protect electronic components from voltage spikes, polarity reversal, moisture or water infiltrations through the power cable.

Wide range of optics and the importance of visual comfort

All ELIOS units can be equipped with narrow, medium, or wide optics. Maximum lighting design flexibility. All ELIOS are designed with a lowered light source to reduce perceived glare. In addition, they can be configured by inserting optical optionals such as honeycomb, for the highest level of visual comfort.

Wide choice of color temperatures

The ELIOS series is offered with a wide range of color temperature options: 2700K , 3000K, 4000K.

RGBW dynamic scenarios

The ELIOS series, in addition to different color temperatures, in ELIOS 1.1 models is available in versions equipped with RGBW sources, controlled in PWM (or DMX on request).

Lucis Bollard

[ˈlu:tʃis] [ˈbɒl.lard]

LUCIS BOLLARD, the combination of simplicity and effectiveness. Available in four different heights, this family of bollards is designed to pleasantly illuminate walkways, paths, gardens, and parks. The extruded aluminum body is protected by a polyester powder epoxy coating that guarantees corrosion resistance equivalent to 1500 hours in salt spray.

Lucis Bollard

Lucis Bollard 1.0

Lucis Bollard 1.1

Lucis Bollard 1.2

Lucis Bollard 1.3

Lucis Bollard / Product features

Suitable for any context

Available in four different heights, LUCIS BOLLARD adapts with versatility to every context of use: from footpaths to gardens, from private entrances to public spaces. One aesthetic, multiple solutions.

Construction quality as the first goal

At MIZAR we think that one of the first features of a “Made in Italy” product is an excellent build quality. The body of the LUCIS BOLLARD is made of 6082 anticorrosional aluminum, extruded. Finishing carried out with primer followed by epoxy polyester powder painting, tested to withstand over 1500h in salt spray. The CNC-machined stainless steel base adds further reliability to the product.

Corrosion resistance at the highest level

The care taken in the design and choice of materials makes it possible to achieve the highest classes of the international ISO 9223 standard. All LUCIS BOLLARD are rated C5 (“Very High”).

Highest degrees of protection

LUCIS BOLLARD are fully protected against the ingress of any type of dust (IP 6X). The products are also tested against water jets (IP X5). 12,5 litres per minute, at a pressure of 30 kPa, at a distance of 3 m.

IdroSkud®

Innovative Mizar exclusive patent to protect electronic components from voltage spikes, polarity reversal, moisture or water infiltrations through the power cable.

Modular asymmetrical optics

The modular core of LUCIS BOLLARDS allows you to choose the ideal height to make the most of the asymmetry of the optics. In addition – upon request – light source placements can be customized. Possibly placing them on both sides of the bollard as well.

Wide choice of color temperatures

The LUCIS BOLLARD series is offered with a wide choice of colour temperatures: 2700K, 3000K and 4000K. In addition – on request – versions with extremely warm colour temperatures (2200 K) are available.

Faithful reproduction of colors

The LUCIS BOLLARD series products are equipped with a range of top-quality LED light sources. Colour rendering index (CRI) > 90. They also offer excellent colour temperature consistency, with a Step MacAdam value of 3.

Lucis

['lu:tʃis]

LUCIS is a compact and elegant step light, designed to enhance walkways, stairs, and embankments with discreet yet effective accent lighting.

Designed to withstand weathering and corrosion, it is available in two different light outputs and multiple color temperatures. LUCIS is the ideal choice for urban and residential contexts where functionality and aesthetic appeal go hand in hand.

Lucis 2.1

Lucis / Product features

Construction quality as the first goal

At MIZAR we think that one of the first features of a “Made in Italy” product is an excellent build quality. The body of the LUCIS is made of 6082 anticorodal aluminum, CNC-machined from solid. Finishing carried out with primer followed by epoxy polyester powder painting, tested to withstand over 1500h in salt spray.

Corrosion resistance at the highest level

The care taken in the design and choice of materials makes it possible to achieve the highest classes of the international ISO 9223 standard. All LUCIS are rated C5 (“Very High”).

Highest degrees of protection

LUCIS are fully protected against the ingress of any type of dust (IP 6X) and protected against temporary immersion for up to 30 minutes, to a depth of 1 metre (IP X7). The products are also tested against high-pressure water jets (IP X6). 100 litres per minute, at a pressure of 100 kPa, at a distance of 3 m.

Modern in installation too

The LUCIS series is complete with accessories for installation on any material, including outercases specifically designed for quick and easy fixing on walls where thermal insulation is present.

IdroSkud®

Innovative Mizar exclusive patent to protect electronic components from voltage spikes, polarity reversal, moisture or water infiltrations through the power cable.

The same product with two different personalities

LUCIS comes with two light distribution option. You can choose the oval optic, for a wider and softer effect. Or the "blade" optic, for a more distinctive and accent distribution.

Wide choice of color temperatures

The LUCIS series is offered with a wide choice of colour temperatures: 2700K, 3000K and 4000K. In addition – on request – versions with extremely warm colour temperatures (2200 K) are available.

Faithful reproduction of colors

The LUCIS series products are equipped with a range of top-quality LED light sources. Colour rendering index (CRI) > 90. They also offer excellent colour temperature consistency, with a Step MacAdam value of 3.

Forma

[ˈfɔr.ma]

FORMA, the innovative modular step light designed for maximum customization. Its LED engine, compatible with standard junction boxes, can be combined with a variety of die-cast finishes. In addition, the reflector, magnetically attached to the body, offers the freedom to customize it or replace it effortlessly, making FORMA a truly adaptable lighting solution.

Forma / Product features

Construction quality as the first goal

At MIZAR we think that one of the first features of a “Made in Italy” product is an excellent build quality. The body of the FORMA is made of EN AB46100 die-cast aluminum. Finishing carried out with primer followed by epoxy polyester powder painting, tested to withstand over 1500h in salt spray.

Corrosion resistance at the highest level

The care taken in the design and choice of materials makes it possible to achieve the highest classes of the international ISO 9223 standard. All FORMA are rated C5 (“Very High”).

Highest degrees of protection

FORMA are fully protected against the ingress of any type of dust (IP 6X). The products are also tested against water jets (IP X5). 12,5 litres per minute, at a pressure of 30 kPa at a distance of 3 m.

Innovative and modular installation

The FORMA series has been designed for installation directly on 503 junction boxes for the small models and 506-type for the large ones. The ideal product for quick and easy mounting on any wall covering. Depending on the chosen size, it is possible to change the shape of the cover (round or square) without needing to replace the core unit or modify the wiring.

IdroSkud ®

Innovative Mizar exclusive patent to protect electronic components from voltage spikes, polarity reversal, moisture or water infiltrations through the power cable.

Performing asymmetric optic

The size of the reflector and the light source tilting are specifically designed to give FORMA an asymmetrical performance. It results in excellent uniformity even at high interdistances.

Wide choice of color temperatures

The FORMA series is offered with a wide choice of colour temperatures: 2700K, 3000K and 4000K. In addition – on request – versions with extremely warm colour temperatures (2200 K) are available.

Fully customizable

FORMA has a front plate that can be easily removed and customized, thanks to a magnetic attachment system. Customization can be done through laser engraving to recreate images, logos, or patterns. It can be painted in contrast or coated with another material of choice, while maintaining the same properties of weather resistance and durability over time.

Forma / Product features

Faithful reproduction of colors

The FORMA series products are equipped with a range of top-quality LED light sources. Colour rendering index (CRI) > 90. They also offer excellent colour temperature consistency, with a Step MacAdam value of 3.

Construction detailed view

LED engine compatible with standard junction box (FORMA 1 with size 503 and FORMA 2 with size 506)

Modular concept. The square and round screens are compatible with the same LED engine

Magnetic fixing

The reflector is customizable (can be ordered separately)

Quantum / Product features

Construction quality as the first goal

At MIZAR we believe that one of the first characteristics of a "Made in Italy" product is an excellent build quality. The QUANTUM body is made of die-cast 6082 anticorrosive aluminium. Finished with primer followed by epoxy polyester powder painting, tested to withstand over 1500h in salt spray. Extra-clear tempered glass diffuser, screen-printed black. Technopolymer TIR optics.

Corrosion resistance at the highest level

The care taken in the design and choice of materials allows the highest classes of the international ISO 9223 standard to be achieved. All QUANTUMs are classified C5 ("Very High").

Chameleon-like

QUANTUM is available in a paintable version. The product is treated with a specific paintable primer, that preserves all its mechanical characteristics, regardless of the subsequent painting. The end user has the possibility of customising the colour of the external finish to his liking.

Excellent degrees of protection

QUANTUM are fully protected against the ingress of any kind of dust (IP 6X). The products are also tested against water jets (IP X5). 12,5 litres per minute, at a pressure of 30 kPa at a distance of 3 m.

Wide range of optics

All QUANTUMs can be equipped with narrow, medium, wide or elliptical optics. Maximum flexibility in lighting design. Bi-emission appliques models - on request - can be equipped with mixed optics.

Wide choice of color temperatures

The QUANTUM series is offered with a wide choice of colour temperatures: 2700K, 3000K and 4000K. In addition – on request – versions with an extremely warm colour temperature (2200 K) are available.

Faithful reproduction of colors

The QUANTUM series products are equipped with a range of top-quality LED light sources. Colour rendering index (CRI) > 90. They also offer excellent colour temperature consistency, with a Step MacAdam 3 value.

The importance of visual comfort

All QUANTUMs are designed with a lowered light source to reduce perceived glare. They can also be configured by inserting optical optionals such as honeycombs and louvres. For visual comfort at the highest level.
