A flexible workspace designed for you

FloFVD is backed by Flotek, a UK technology partner built around secure, reliable, people-first service.

That means our partners get more than a cloud desktop, they get a flexible workspace solution supported by a team that understands real business pressures, removes complexity, and helps them work with confidence from anywhere.

FVD is a workspace built around your business.

Why businesses choose us:

Help from real people who understand your business and move quickly when you need.

Benefit from proven technology and forward-thinking solutions shaped by global leaders.

A strong partner network gives you access to reliable, enterprise-grade solutions.
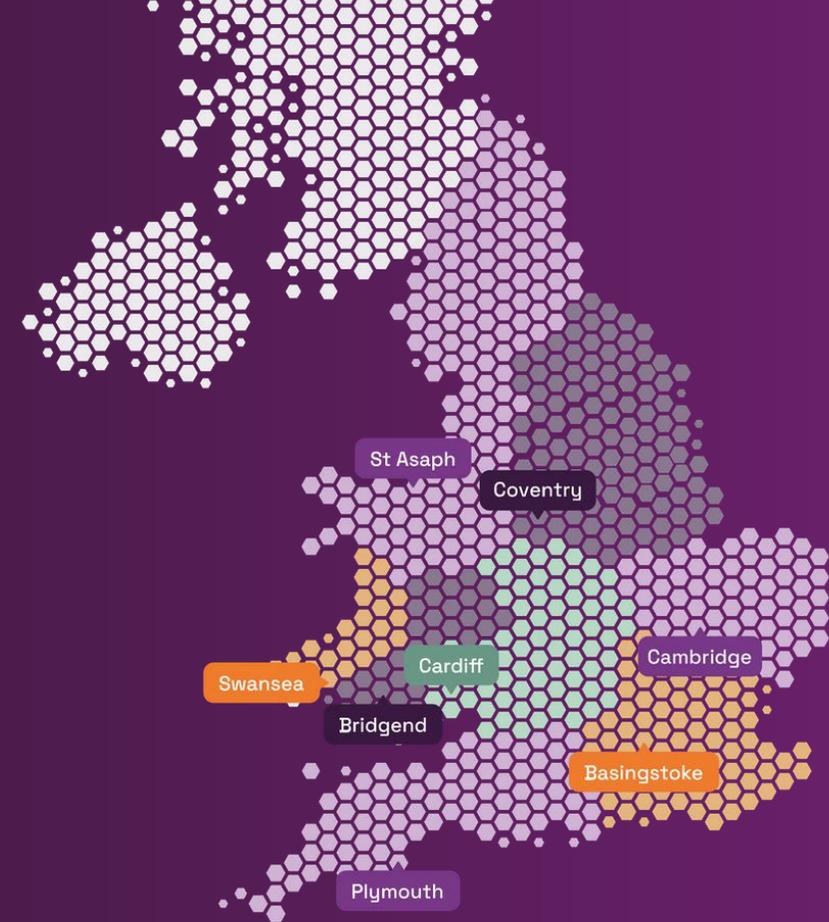

Our team is invested in doing the right thing, because your success matters to all of us.

Deep experience across cloud, comms, connectivity, and security in one joined-up partner.

We remove complexity, keep things clear, and put you back in control.

Local support. Smarter technology. A partner you can trust.

# Work Anywhere with Consistency

Flo Virtual Desktop is a secure, cloud-hosted Windows workspace that enables your team to confidently work from any device with the same consistent experience.

What it is

- A secure, managed Windows desktop or application streamed from the cloud. You choose if you would prefer a full desktop experience or simply stream the app.
- Run from any device: desktop, laptop, mobile, or even tablet or web browser without any app install.
- Every user signs into their same, consistent, protected workspace, from any device, behind multi-factor, secure, Microsoft Authentication.

Why it matters

- Enables reliable, high-performance working.
- Keeps data central and protected.
- Allows team members to work from anywhere, with the same experience.

Reliable Access For Everyone

Solving your legacy application challenges

Keep critical legacy software running without old servers, restricted remote access, or stalled transformation – while moving confidently into Microsoft 365, cloud, and Ai.

Use Case:

- Finance tools, line-of-business apps, legacy plugins.

Solution:

- Run legacy apps on FVD while modernising around them.

Outcome:

- Keep essential tools running without hardware headaches.

We solve everyday issues that slow teams down and complicate desktop management. By running legacy Windows-only apps on FVD, organisations can keep essential tools working while modernising—without hardware headaches.

Run Legacy Seamlessly

Keeping Legacy Apps Running Smoothly

Bringing Control to Shared Workforces

Deliver a consistent, secure desktop experience across shared devices to reduce disruption, support demand, and onboarding friction for fast-moving operational teams.

Use Case:

- Warehouses, manufacturing, retail, and healthcare with shift patterns.

Solution:

- Every login becomes the same controlled desktop, no matter who used the device before.

Outcome:

- Cleaner devices, less support noise, faster onboarding.

Every login becomes the same controlled desktop, no matter who used the device before. Resulting in cleaner devices, less support noise, and faster onboarding.

Unify Device Experience

Enabling Secure Access without Losing Control

Give contractors and third parties fast, controlled access through locked-down desktops that keep data protected, centralised, and easy to manage.

Use Case:

- Contractors, agencies, offshore teams.

Solution:

- Provide a locked-down desktop that keeps data central and logs access.

Outcome:

- Control without delay. Easy, clear onboarding and offboarding.

With a locked-down desktop that keeps information central and logs all activity, organisations can give contractors, agencies, and offshore teams what they need – secure access without delay, and clear, simple onboarding and offboarding.

Fast, Secure Control

Giving your Business Capacity to Scale Quickly

Provision desktops in minutes to support seasonal demand, project surges, or disruption — without the delays, cost, and inflexibility of physical hardware.

Use Case:

- Seasonal hiring, project spikes, device failures.

Solution:

- Provision desktops fast, remove them when no longer needed.

Outcome:

- Flexible, predictable, and avoids laptop lead times.

Businesses that need to scale quickly often struggle with slow, inflexible provisioning. By spinning up desktops fast and removing them just as easily, FVD provides predictable, flexible capacity without delays.

Adapt to Surges

How it Works

FVD moves the desktop environment into our cloud, so every user gets the same secure workspace wherever they sign in.

The Simple Idea:

Move the desktop environment from the physical server or device into our cloud. The device becomes a secure window into a centrally managed workspace.

What this Delivers

- Strong performance without premium hardware.
- Built-in backup, monitoring, and recovery.
- A consistent experience across every device.
- High uptime through resilient, UK-based hosting.
- Instant upgrades of memory/storage as your business grows.

FVD moves the desktop into the cloud, giving every user the same secure, high-performing workspace on any device.

Fully in the secure cloud

Step by step guide

FVD is simple to use and you can get everything set up right away with just a few clicks. The interface keeps things straightforward, so you're never stuck wondering what to do next. If you prefer a visual walkthrough, we've got you covered. You can also watch our step-by-step video here.

Get a free IT & comms review and unlock real business improvement

Most organisations don't realise how much better, faster, and more efficient their operations can be. An IT review gives you clarity, highlights opportunities, and removes the frustrations slowing your teams down. It's also worth noting that 76% of businesses save money after reviewing their comms setup.
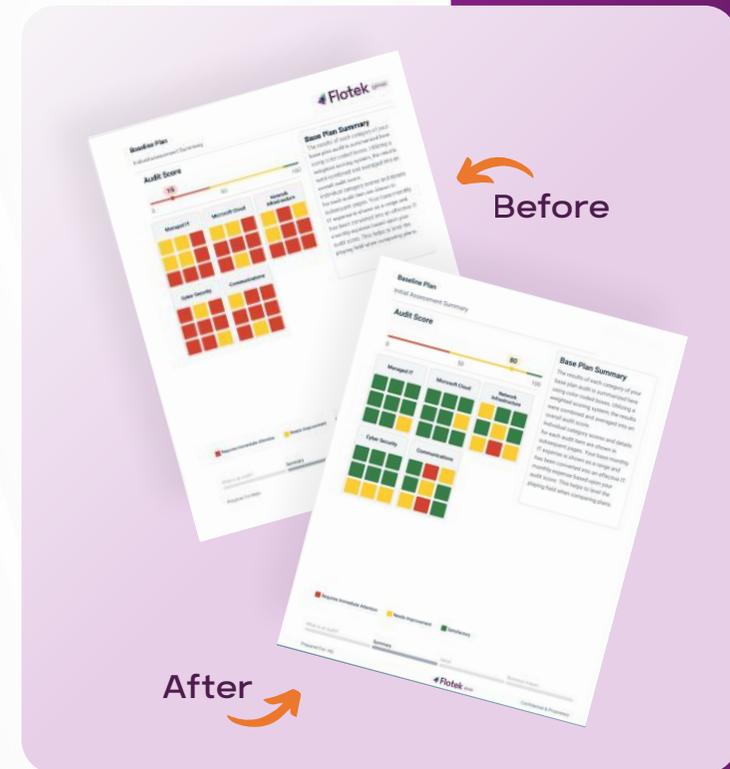

Why an audit matters

- Improve business performance with smarter workflows
- Introduce automation and Ai into your daily operations
- Simplify your technology stack and reduce team frustration
- Identify unused licences
- Eliminate unnecessary costs
- Strengthen security and close avoidable gaps
- Bring all your technology under one trusted partner

What you get

- A full review of your communication and cloud systems
- Practical recommendations you can act on immediately
- A clear roadmap to improve efficiency, reliability, and growth
