

CHEMSURF[®] CHEMICAL-RESISTANT SURFACES

Wilsonart[®] brings a new era of laboratory protection and style

When the surface spec requires resistance to the harshest of acids, bases and solvents but not at the expense of design and style, Wilsonart Chemsurf answers the challenge.

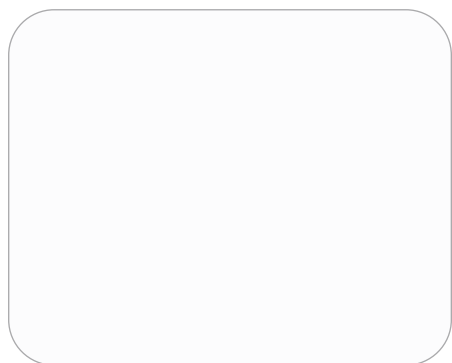

Specifically designed for highly corrosive environments, Chemsurf provides exceptional chemical and wear resistance in an extensive array of decorative patterns.

This versatile product is an ideal alternative to slate, stainless steel or epoxy when either cost or weight is prohibitive and is also preferable for applications where the use of cleaning agents is indiscriminate.

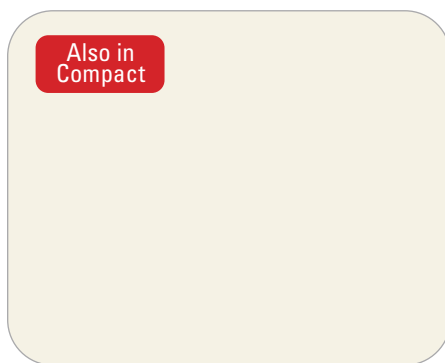

WILSONART® CHEMSURF® CHEMICAL-RESISTANT HPL LAMINATE

Available in postforming grade High Pressure Laminate, Wilsonart Chemsurf offers practicality without sacrificing design and style. It is often less expensive upfront and over its life cycle than alternatives such as stainless steel, or slate while also being more versatile.

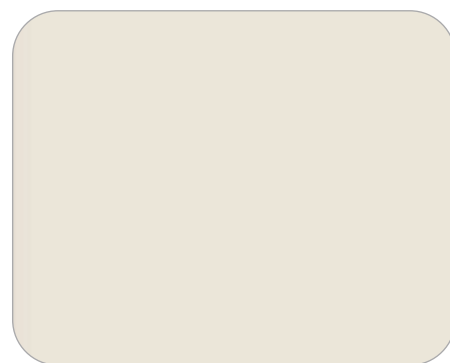

Intended for vertical and horizontal application, Wilsonart Chemsurf HPL laminate can be applied and is perfect for areas that are vulnerable to chemical attack. Available in ten colours, Chemsurf HPL laminate can be postformed so it is ideal for horizontal applications where it is desirable to roll the laminate on a simple radius.

WILSONART® CHEMSURF® PROTECTOR COMPACT LAMINATE

Chemsurf Protector Compact laminate offers practicality without sacrificing design and style. Suitable for horizontal or vertical applications and due to its thickness and strength does not require a substrate.

Available in a choice of two thicknesses and four colours, Wilsonart Chemsurf Protector Compact laminate incorporates our protector layers on the facia-side adding incredible scuff, scratch and impact resistance to its chemical environment credentials. It is also the practical and attractive surfacing for wainscoting in any of these below areas.
