

Dynamic Response, Dynamic Comfort

Airvana's Dynamic Air Response is due to its innovative structure. Comprised of millions of air pockets that adapt and redistribute in real time, Airvana adds a distinct and premium experience to bedding and furniture products.

When pressure is exerted on the material, these air pockets shift and move in a coordinated pattern, dynamically adapting to the shape, size, and contours applied.

The result is a material that feels both soft and supportive, providing cushioning relief and personalized comfort. In bedding, this means a restful night's sleep despite any tosses or turns. In seating, Airvana keeps comfort consistent across its use areas.

CUSTOMER BENEFITS:

- Dynamic Air Response
- Non-temperature sensitive
- Consistent comfort and performance
- Fine cell structure, luxurious feel
- Personalized pressure relief
- CertiPUR-US® certified foam
- Environmentally friendly VPF™ technology
