SUITABLE FOR MICROWAVE AND TRADITIONAL OVEN  
BIODEGRADABLE  
COMPOSTABLE

# A 100% ECO rigid takeaway food packaging entered production in EU, at **BFG Packaging Romania**

*The use of ecological takeaway food packaging is becoming a pressing necessity due to the legislation and an issue given the pollution level reached in the world.*

**A 100%-ecological and compostable** rigid takeaway food packaging made in EU is available as of February 2022.

The new range of products is made entirely of **FSC-certified wood fiber** acquired from the EU market.

This wood fiber range of products is made by BFG Packaging at its factory in Romania, with highly automated technology, following the completion of a EUR 20 M investment.

This is a milestone for the European industry. The newest BFG's range of products presents the first alternative to imports from Asia for rigid takeaway food packaging that is 100% ecological and compostable, made in Europe.

# BENEFITS

## OPERATIONAL

### **No more production shortages**

BFG Packaging honors all orders for its partners from existing stocks that are created permanently.

### **Short logistic chains**

Producing inside the European space will allow access to the entire European market through much shorter logistics chains, compared to imports from other continents.

### **Short delivery time**

Fulfilling orders exclusively from stocks and short supply chains will allow a cumulative impact that reduces delivery time to few days, or at most a couple of weeks.

### ***No more long-term blocked funds***

### ***No currency risks***

### ***No more geopolitical/political risks posed by international commerce***

## REPUTATIONAL

### **Lower carbon footprint**

Long supply chains are an important source of carbon emissions. Avoiding transcontinental shipping and replacing it with a short, intra-European supply chain will help reduce the overall carbon footprint.

Such a decision will have a positive impact on the solidity of its message, or claims about a sustainable and responsible business model towards the environment and communities.

### **Supporting EU economy**

The purchase of products made in the EU, made in their turn entirely from raw materials originating also within the European single market, has a positive economic impact horizontally on other European businesses, supporting jobs creation and generating additional revenues for EU member states.

### **High quality**

Due to the very strict quality standards implemented at the level of the community block, the products made in the EU have a reputable benefit of incorporating the latest technologies and having the highest quality available.

### **Sustainability**

The purchase of ecological rigid takeaway food packaging made of FSC-certified wood, sends a strong message to promote a responsible attitude towards the environment, to support a sustainable approach to forests, for the ultimate benefit of present and future generations.

## WOOD FIBER eco-friendly MINI-PACKING

*BFG Packaging developed customized mini-packing for the wood fiber products.*

Based on the requirement of the market of having single use packaging products in small packages, on the shelf, we developed a service of packaging the natural fiber products in **mini-packs of 2 to 25 products per set**.

Mini-packing can be loose or stretch from clear plastic foil, with the number of products set on request. They can have **personalized labels**, any color and shape.

Exterior cardboard box packaging for mini-packs can be standard box or "**shelf box**" type with removable cover. They can be colored or not and personalized with the requested information.

Even if this type of custom packaging requires a lot of details, the **delivery time is short**, after all the details have been established.
