TRADING & CONTRACTING W.L.L

Functionality, safety and elegance

The curved outlines of functionality combined with safety and elegance. The kickboard encloses the riding arena and protects horses and riders from injuries. Its curved design provides enhanced protection for the rider's outside leg. It also helps prevent injuries to the hooves, cannon bones and carpal joints of the horse. What's more, the exclusive shape gives your arena an elegant overall appearance.

Is suitable for do-it-yourself installation. The curved kickboard elements are easy to handle. Four cut-to-size elements for perfect corner solutions are included in the set. The elements can be fastened in place with no substructure required. In newly built arenas there's no need to provide the otherwise necessary concrete base, which gives you enormous cost savings.

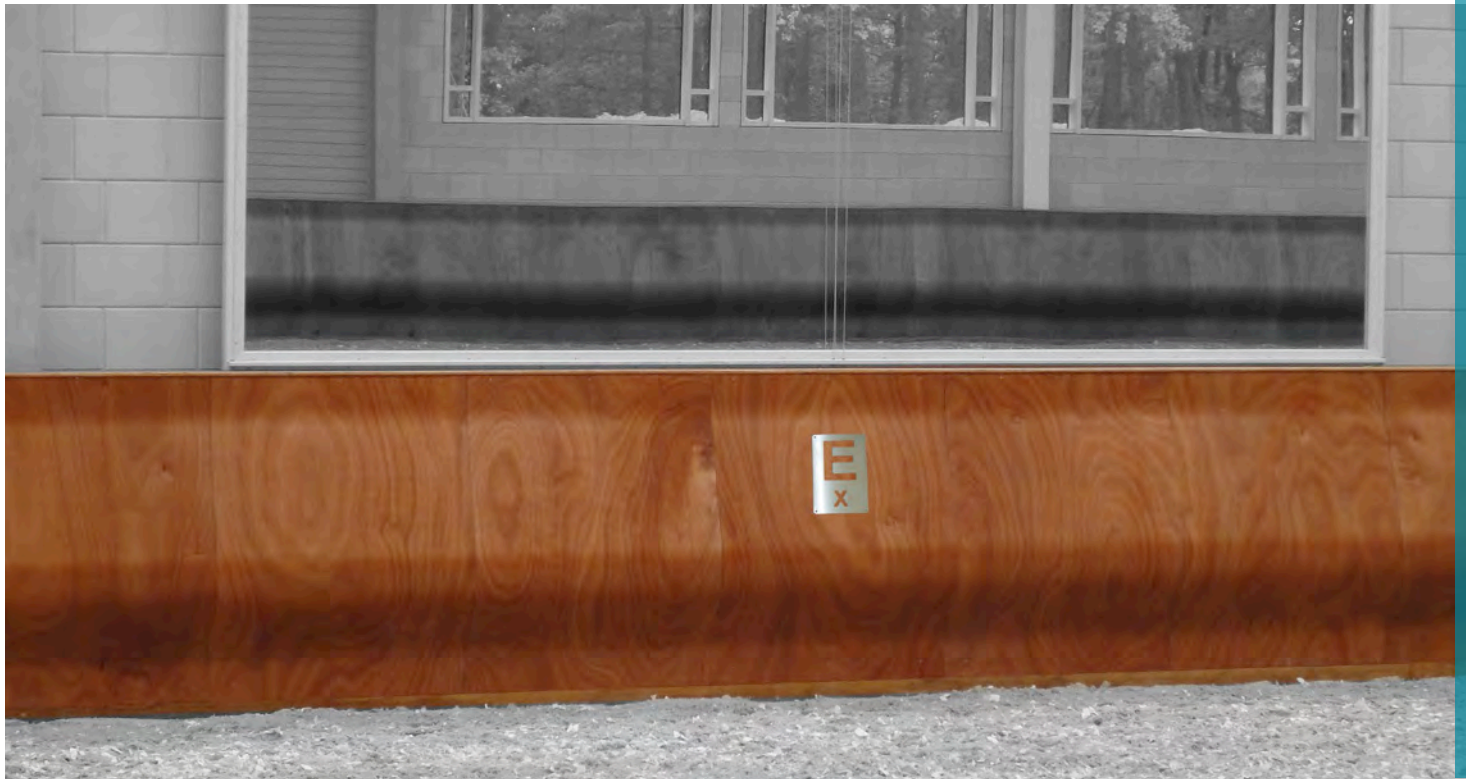

Perfect all around

For the multi-angular constructions in horse walker and lunging facilities, kickboard allows tailor-made solutions that convey a nearly round appearance.

The curved design consisting of nine glue-laminated, thermoformed wood veneers gives the kickboard an excellent impact resistance. The external layers are made from hardwood, the internal layers from poplar wood.

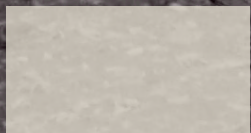

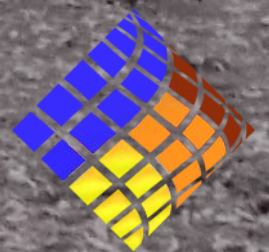

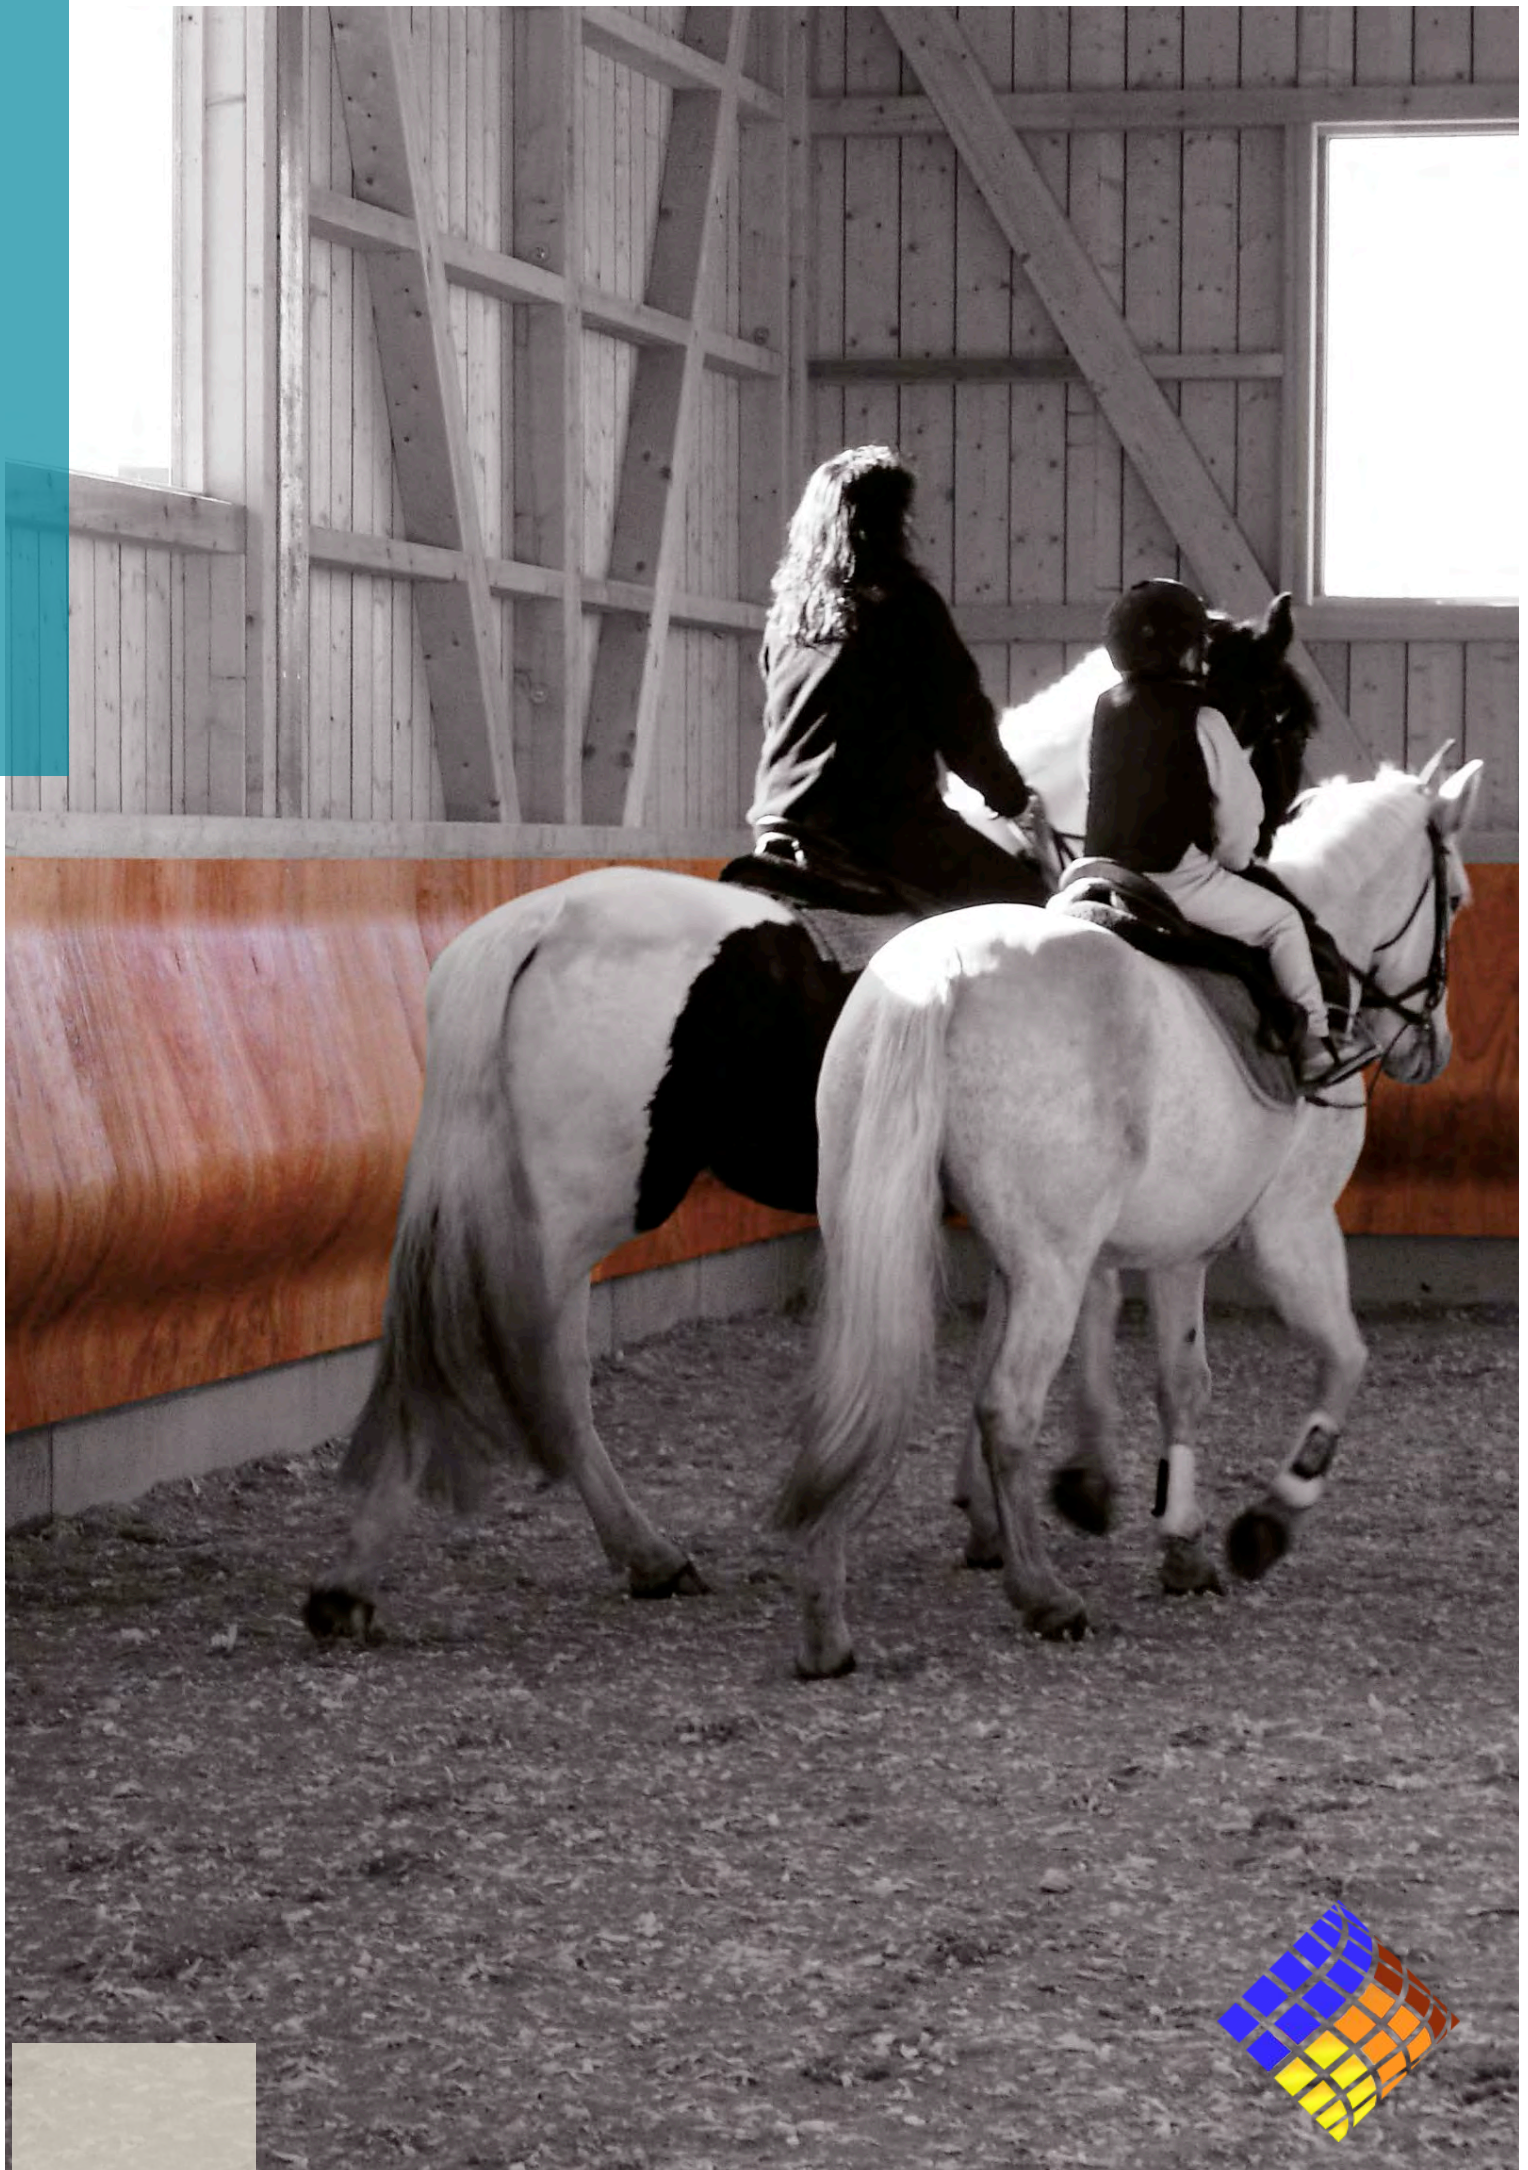

MARKERS

Dressage markers

Mastery of the riding figures is a must for every dressage rider. In addition to the commonly used lines, fitted with professional markers and circle points of high-quality stainless steel to guide you through your dressage tasks.

We create a better life
for horse & rider worldwide
