

4DT TACTICAL HEADSET UPGRADE KIT

Introducing the 4DT Tactical Headset Upgrade Kit System. Every aspect of this kit was developed specifically for the warfighter and the dynamic environment they operate in.

Key Features of 4DT Upgrade Kit

- **Improved protection** – Independent and DoD testing have shown the core material of these products provide superior blunt impact performance over OEM product.
- **Improved Comfort** – The 4DT Retrofit kit provides significantly improved comfort over similar product, even during extended mission operations. Ear Seals will seal around temples of glasses and not drive them into the wearers head. Additionally, hot spots will be eliminated.
- **Thermal Stability** – The internal fabric of liner provides thermal regulating properties. When operating temperature is high, the liner will remain cooler. When temperature is cool, liner will help hold heat in.
- **Anti-Microbial** – Liner and ear seals are enhanced with permanent anti-odor and anti-microbial performance.
- **Passive Attenuation**- The 4DT Noise Reduction Kit replaces open cell foam inside the ear cups, adding additional passive noise attenuation. Testing has shown and 5-6db improvement over conventional open celled foam
- **Berry Compliance**- All 4DT Product is USC, Title 10, Section 2533a complaint

Ordering Information

4DT Offers a wide range of retrofit tactical headset products. Below is a list of 4D Tactical retrofit products that will replace existing OEM product.

- **4DT Ear Seals with Snap Rings**
(Replaces Snap Ring Style Ear Seals)
P/N 3-3033
- **4DT Ear Seals with 3M VHB Glue rings**
(Attaches to existing ear cup flange)
P/N 3-3012
- **4DT Noise Reduction Kit**
(Replaces existing open cell foam)
P/N 3-3025

Product Overview

4DT Ear Seals – The 4DT Tactical Headset Retrofit Ear Seals will replace either snap ring style or peel and stick ear seals in various types of tactical headsets. Simply remove existing ear seals and attach with supplied 3M VHB glue rings or snap rings, depending on headset type. The 4DT retrofit ear seals offer the same level of comfort as all of our retrofit suspension system products.

4DT Noise Reduction Kit – The 4DT Noise Reduction kit replaces existing open cell ear cup insulation foam. Both DoD and Independent testing have shown a 5-6 db improvement in passive attention over open cell foam materials. Replacement is fairly straight forward and only takes a couple minutes to complete.

Note: If you are a unit purchasing larger unit level purchases, or complete kits, please contact 4DT directly for special volume pricing.
