MASTERCOOL
IN GOD WE TRUST

<https://www.mtpindo.co.id/>

Introduction

Welcome to **MASTERCOOL**, your trusted partner for innovative and reliable HVAC solutions. As an industry leader in the supply of Air Filtration, Ventilation and Air Conditioning Systems (HVAC), we are committed to providing the best quality in creating a comfortable, healthy and efficient air environment.

With years of experience, we have understood and mastered the proper temperature regulation and air quality in each space. Our professional team consists of technical experts and HVAC engineers who are dedicated to designing, installing, and maintaining HVAC systems that suit each customer's unique needs.

MASTERCOOL not only provides high-quality products from industry-leading brands, but also offers personalized consulting services and solutions tailored to your specific needs. Reliability, energy efficiency and sustainability are our main focus in providing the best HVAC solutions.

We are proud to be part of large and diverse projects, ranging from commercial to industrial projects, and we always strive to exceed our customers' expectations. Let's join **MASTERCOOL** on the journey of creating optimal environments for well-being and productivity.

About Us

VISION

To be the leading HVAC company in Indonesia by establishing a wide business network based on the latest technology

MISSION

LEADING

To be the premier solution for every HVAC need by providing quality products and services that focus on energy efficiency

BUSINESS NETWORK

Building and expanding Mastercool's business network globally by creating business collaborations that have a positive impact on business, nation and country.

TECHNOLOGY

Utilize and maximize the use of information technology to improve the quality of customer service and operational efficiency.

PT McQuay Tritunggal Pratama was established in 2003 in Batam, Indonesia as the first member of MasterCool business network. We are a general contractor specializing in HVAC Systems, Heat Pump Systems, Electricity Saving Programs, Epoxy Coating Materials, and Water Wellness Systems.

We ensure every job is completed to a good standard and on time. This is supported by our qualified and certified technicians, professional management, and reliable customer service team.

We specialize in installation, maintenance, and service for all types of air conditioning, heating, and refrigeration equipment. HVAC is our first business since our company started running with more than 20 years of experience, we provide the best service available.

Our Factory

Custom Requirements

MasterCool has accumulated 20 years of experience in the HVAC field, specializing in installation, procurement, maintenance, and repair of systems such as Chillers, AHUs, Ducting, and more. We undertake a variety of tasks including installation, procurement, maintenance, and repair. Additionally, we boast a manufacturing facility to cater to custom requirements as per customer or company needs. Our offices are strategically located in several key areas such as Batam, Surabaya, Cikarang, and Bali.

DUCTING

Ducting is a system of ducts or air ducts used to circulate air or liquid from one place to another. Ducting is usually made of materials that are resistant to air pressure and have a construction designed to ensure efficient air or liquid flow. Ducting systems are widely used in various applications, including ventilation, heating, cooling, and air conditioning systems in buildings.

FLEXIBLE FOIL DUCT

Made of aluminum foil and other flexible layers. Versatile and easy to install.

METAL DUCTING

Metal ducting has advantages in terms of structural strength, resistance to high air pressure, and can be used under various environmental conditions.

DUCTING FIBER REINFORCED PLASTIC (FRP)

Made of fiberglass reinforced with resin. Corrosion resistant and often used in the chemical industry.

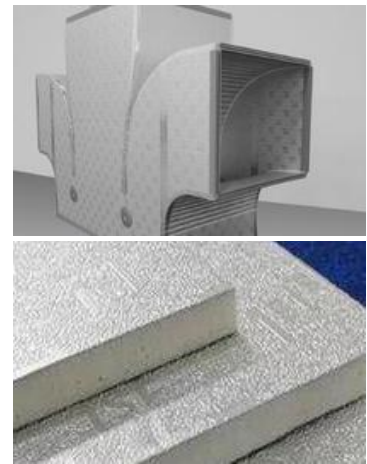

FirstDuct

ADVANTAGES

- Excellent Insulation Properties
- Reduce construction time and cost
- Create thermal comfort
- Spread of flame index 0
- Ignitability index 0
- Eco-friendly product (CFC-Free)
- Cleanable & Hygienic
- Heat evolved index 0
- Longer life span 20 years
- Energy saving
- Noise reduction
- Lightweight material with built-in PIR Core

FirstDuct Panel

FirstDuct provide the best solution for your ducting needs with high quality materials. Our pre insulated ducts (PIR) have an excellent insulation properties, lightweight material, and great durability. PIR Duct (Poly Isocyanurate Rigid Form) is an improvement from PUR Duct (Poly Urethane Rigid Form) with better fire retardancy, higher density and better R value.

OUR PROJECT

CHILLER UNIT

A **chiller** is a device used to cool or condition air, water, or process fluids in a system. **Chillers** are often used in a variety of applications, including HVAC (Heating, Ventilation, and Air Conditioning) systems, industrial processes, and commercial facilities.

Chillers and split air conditioners are different, although they have the same function as air conditioners. The difference lies in the cooled media, split AC will directly cool the air in the desired room. While the **chiller** works by moving heat from one place to another using a refrigeration or cooling cycle process.

AIR - COOLED CHILLER

An air-cooled chiller is a cooling system that is commonly used in various industrial, commercial, and institutional settings to remove heat from a process or room.

ADVANTAGES:

Simplicity: Air-cooled chillers are generally simpler to install and maintain compared to water-cooled systems, as they do not require a separate cooling tower or water supply.

Space Efficiency: They are often more space efficient, suitable for applications where space is limited.

APPLICATIONS:

Commercial Buildings: Common air-cooled chillers are used to cool office buildings, hotels, and shopping centers.

Industrial Processes: Used in various industrial applications, such as manufacturing and chemical processes.

Data Centers: Plays an important role in cooling data centers where temperature control is critical for electronic equipment.

AHU / FCU

Air Handling Unit - AHU is a device used to manage and handle airflow in a building.

Fan Coil Unit - FCU is a device that is generally used to regulate the temperature and air circulation in a room.

WATER- COOLED CHILLER

A water-cooled chiller is also a commonly used cooling system in various industrial, commercial, and institutional settings to remove heat from a process or room.

ADVANTAGES:

Energy Efficiency: Water-cooled chillers tend to be more energy efficient compared to air-cooled chillers, especially at high temperature conditions.

High Capacity: They have a higher cooling capacity compared to air-cooled chillers, making them suitable for larger installations.

APPLICATIONS:

Industry: Water-cooled chillers are often used in industrial processes that require high cooling capacity.

Precision Temperature Maintenance: Suitable for applications that require precision temperature maintenance, such as laboratories and data centers.

COOLING TOWER

A **cooling tower** is a device or system that is commonly used in industrial and commercial processes to remove heat generated by machinery, production processes, or cooling systems.

SPLIT DUCT UNIT

Split Duct AC is an air conditioner that lowers the air temperature in a room by transferring heat from the room to the outdoor area through an air duct called Ducting. With the use of this ducting system, all room temperature controls can be carried out at one point so that the room temperature settings will be distributed to other rooms.

AIR HANDLER UNIT

Split Duct AC is inseparable from the Ducting System which is a fundamental component in the AC system as an introduction to air that has been processed from a cold or hot source to the room that will be regulated. The benefits of using Split Duct AC include superior energy efficiency compared to other types of AC.

INDOOR UNIT

It is the inside of a house or building that produces cold air. It usually consists of fans, cooling coils, and air filters.

OUTDOOR UNIT

It is located outside the house or building and contains the compressor, condenser coils, and air suction fan.

MULTI S & VRV/VRF UNIT

A **Multi AC system** or **Multi Split AC** is a type of air conditioning system that allows one outdoor unit to connect multiple indoor units.

VRV (Variable Refrigerant Volume) or **VRF (Variable Refrigerant Flow)** is an advanced, energy-efficient air conditioning system that can variable refrigerant volume.

BELZONA (Batam Only)

Belzona is a brand and related products issued by **Belzona Polymeric Limited**, a company specializing in the development and production of high-performance polymeric materials for industrial repair, protection and maintenance. Belzona products are commonly used in a variety of industries, including oil, gas, marine, power generation and manufacturing.

Some of **Belzona's** well-known products include Belzona 1212, which is a flexible polymer paste used for quick and durable repairs, and Belzona 1161, an anti-wear coating that can be applied with surface tolerances.

Belzona's advantages include their ability to handle repairs and maintenance without the need for hot work, as well as durability against harsh environments and extreme operating conditions. These products are often used to extend the service life of equipment, prevent corrosion, and overcome various technical challenges in different industries.

BELZONA

1000 Series (Metallic Repair & Protection System)

The 1000 series of Belzona products generally refers to products designed for the repair, reconstruction and protection of metals. The products in this series mainly focus on the restoration of damaged or corrosive metal structures.

2000 Series (Elastomeric Repair Systems)

The 2000 Series of Belzona products is a range of solutions specifically designed for elastomer protection, rubber repair and general repair of flexible materials.

3000 Series (Waterproofing Systems)

The 3000 Series is a waterproofing system to repair and protect buildings and structures.

4000 Series (Concrete Repair and Protection Systems)

The 4000 Series is an epoxy-based, high-performance, concrete and masonry reconstruction and covering material with outstanding chemical, abrasion and impact resistance.

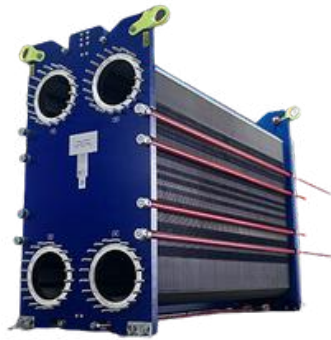

5000 Series (Preventative Maintenance Systems)

The 5000 series is specialized for protection from physical, chemical, or bacterial attack in a variety of environments.

Alfa Laval is a Swedish company founded by Gustaf de Laval and Oscar Lamm in 1883. Today, Alfa Laval is recognized as a world-leading manufacturer of products in the fields of **Heat Transfer, Separation and Fluid Handling**.

Alfa Laval is a global technology company focused on solutions in food processing, water, energy and industry.

Heat Exchangers: Alfa Laval provides heat exchangers for applications in various industries, including the petrochemical, pharmaceutical, food, and beverage industries. Their heat exchangers include various types, such as plate heat exchangers, spiral heat exchangers, and others.

Alfa Laval also offers complete evaporator systems. These systems include heat exchangers, separators, and other components required to efficiently process liquids and produce the desired results.

MasterCool has successfully upgraded the AHU (Air Handling Unit) and MAU (Make-up Air Unit), along with installing AHU control panels. Additionally, we have installed chiller pumps, cooling tower pumps, FCU (Fan Coil Unit), exhaust systems, **PHE (Plate Heat Exchanger)**, PHE pumps, PHE tanks, and cold storage units. Upon completion of the installations, MasterCool consistently monitors the performance of the AHU units to ensure optimal operation. With our commitment to quality and comfort, MasterCool is ready to provide you with the best HVAC solution.

PROJECT REFERENCES

With more than two decades of in-depth experience, **MasterCool** has become the first choice for diverse **HVAC** projects, ranging from industrial, commercial, to residential scale. Our expertise also involves handling Belzona Epoxy Coating projects, demonstrating our ability to provide comprehensive solutions to customer needs.

MasterCool continues to lead the **HVAC** industry with a commitment to quality, safety and customer satisfaction. With an experienced team and the latest solutions, we are ready to support your every project need.

Client Name : **BATAM MARRIOTT HOTEL HARBOUR BAY**
 Years : 2021 - Present
 Services : HVAC Equipment Supply & Installation, Annual Maintenance Chiller
 Supply : York Chille YVYA, YEWS, CHWP, CWP | EK AHU & FCU

Client Name : **PACIFIC PALACE HOTEL**
 Years : 2015 - Present
 Services : Preventive maintenance & Repair
 Supply : York Chiller YK & Cooling Tower

Client Name : **PAX OCEAN OFFICE BUILDING**
 Years : 2022 - Present
 Services : Supply & Installation
 Supply : All HVAC systems 6 Euroklimat Chiller EKAC 460 units

BELZONA

Client Name : **PT PERTAMINA (PERSERO) DEPOT LPG TANJUNG UBAN**
 Services : Supply & Applying
 Supply : Belzona 1212 & Belzona 1611

In **Tanjung Uban**, Pertamina LPG is one of the best LPG mixers for LPG Gas supply to the whole of Indonesia. But, they only have one gas distribution pipeline, and it was leaking. So, there is only one option to solve this problem instantly, safety (no hot work) with low cost which is using Belzona.

MasterCool applied **Belzona 1212 and 1161** (surface tolerance) to permanently seal the leak until a new distribution pipeline was built. The problem was solved at a very low cost and low downtime.

Client Name : **PT DALLE ENERGY BATAM**
 Services : Supply & Applying
 Supply : Belzona

5880 Ton Refrigerant capacity chiller **PT DALLE ENERGY BATAM** faced corrosion problem on the tube sheet condenser plate. there was a risk of system leakage and water entering the refrigeration system.

MasterCool offers help to solve the problem by increasing the metal thickness using Belzona Epoxy Coating Material. The tube sheet condenser chiller plates were successfully refurbished and the efficiency of the chiller was also improved.

UVC LIGHT

Client Name : **PT INFINEON TECHNOLOGIES BATAM**

Services : Supply & Installation

Supply : UVC Light

UVC lamps have been widely used in buildings, especially in AHUs to illuminate cooling coils. UVC is proven to kill germs, bacteria, and mold that often grow on AHU cooling coils that cause sick building syndrome and also increase energy usage due to dirty and clogged filters. **MasterCool** team installed this technology in one of our customers, **PT Infineon Technologies Batam**.

The results are good, bacteria and mold in the office and AHU Coil are drastically reduced to healthy conditions.

COLD STORAGE

Client Name : **KUPANG HEALTH DEPARTMENT**

Services : Supply & Installation

Supply : Cold Storage

Cold storage is a large refrigerated room or building designed for the storage of goods in an environment below outdoor temperatures. Products that require refrigeration include fruit, vegetables, seafood and meat. Cold stores are often located near shipping ports used for import/export of products.

MasterCool Surabaya built a **cold storage** for the Kupang Health Department. They use this facility to store all their COVID-19 vaccine stocks.

MASTER

SYSTEM

MasterSystem is a system developed by the **Mastercool** IT team as a form of our adaptation to the development of the digital era. Every job will be recorded digitally and can be accessed in real time. MasterSystem itself has 3 main features, namely **MasterJournal**, **MasterReport**, and **MasterTeam**.

MASTERJOURNAL

Contains the progress of each job which serves as a control medium for the **Mastercool** team in completing client work projects.

MASTERREPORT

Contains reports that can be accessed by customers so that every job can be accessed by customers through internet-connected devices.

MASTERTEAM

Contains employee data that will assist management in managing human resources ranging from personnel data to people development.

CERTIFIED TECHNICIANS

Our technicians are certified to do the job through various trainings

- ✓ CERTIFIED TECHNICIAN FROM BNSP TECHNICIAN
- ✓ K3 ELECTRICIAN TECHNICIANS
- ✓ SCAFFOLDER CERTIFICATE FROM KEMENTRIAN TENAGA KERJA
- ✓ BELZONA'S TECHNICAL PRODUCT APPLICATION TRAINING
- ✓ DAIKIN'S PRODUCT KNOWLEDGE, INSTALLATION, BRAZING, TROUBLESHOOTING RA & VRV
- ✓ PANASONIC'S INSTALLATION, TROUBLESHOOTING SA, & BRAZING
- ✓ CERTIFIED HSE OFFICER
- ✓ YORK CHILLER TRAINING COURSE
- ✓ VRV / VRF ENGINEERING TRAINING
- ✓ HSE AWARENESS BY ISO 14001, 45001
- ✓ CERTIFIED AT HEIGHT OPERATOR

etc....

OUR PARTNERS
