STEAM STYLE PRO QUICK START

## STRAIGHT

**1. FILL THE WATER TANK**  
if you want to straighten with steam technology. Otherwise, switch off the steam.

**2. APPLY HEAT PROTECTION**  
to dry hair and comb through carefully.

**3. USE THE COMB**  
if you want to brush your hair at the same time.

**4. SET THE TEMPERATURE**  
according to your hair structure. Be careful with fine and/or chemically treated hair. Thanks to the steam, less hot straightening is possible. Tip: start on a low setting. Divide into sections depending on the thickness of the hair. Never stay in the same place for longer than 2 seconds.

## WAVES

**1. FILL THE WATER TANK**  
if you want to make waves with steam technology. Otherwise, switch off the steam.

**2. APPLY HEAT PROTECTION**  
to dry hair and comb through carefully. Tip: Straighten very thick, slightly wavy natural hair before making waves.

**3. REMOVE THE COMB**  
for making waves.

**4. SET THE TEMPERATURE**  
according to your hair structure. Be careful with fine and/or chemically treated hair. Thanks to the steam, less hot styling of making waves is possible. Tip: start on a low setting. Never stay in the same place for longer than 2 seconds.

## 5. CREATE WAVES

Divide the hair into 2–3 cm wide strands, depending on the thickness of the hair. Rotate the Steam Style Pro while pulling the hair through the heating plates. A shallower angle tends to create softer waves, while a steeper angle creates tighter or more defined waves. To create beautiful waves, always twist one strand of hair inwards and the next outwards.

## CARE TIPS

- After creating a wave, let it cool in your hand before releasing it. This helps set the wave and maintain its shape for longer.
- A hair dryer with ionic technology, such as the Trisa Plasma Ionic Pro, effectively combats frizz and reduces static in the hair.
- Use a mild shampoo that is free from harsh chemicals and sulfates. This prevents the hair from becoming overly dry.
- Use a soft brush and be especially careful when hair is wet, as it is most prone to breakage at this time.
- A good conditioner or a hair mask helps detangle hair, restore moisture, and keep it smooth.
- A hair oil or serum can help nourish your hair and add shine after styling.
- Avoid hairstyles that pull or strain the hair tightly, such as very tight braids or ponytails.
- Excessive sun exposure can dry out and fade your hair. Use products with UV to protect your hair.

**ENJOY THE FUN OF A GENTLE, PROFESSIONAL HAIR STYLING.**
