Introduction to Clipfly AI

Clipfly AI represents a revolutionary approach to video production, designed to make professional video creation accessible to everyone regardless of technical expertise. By harnessing the power of artificial intelligence, Clipfly AI transforms simple text descriptions or static images into dynamic, engaging videos with minimal effort from the user.

The platform was developed to democratize video production, removing traditional barriers such as expensive equipment, specialized software knowledge, and time-consuming editing processes. Whether you're a content creator looking to enhance your social media presence, a marketer aiming to capture audience attention, or simply a hobbyist with creative ideas, Clipfly AI provides the tools to bring your vision to life.

The free version of Clipfly AI offers access to core functionalities while introducing users to the platform's capabilities. While it does include certain limitations compared to premium tiers (such as watermarked exports and restricted access to some assets), it provides ample features to create impressive videos for personal use, practice, or evaluation purposes.

As you progress through this manual, you'll discover how to leverage Clipfly AI's intuitive interface and AI-powered tools to generate videos that would traditionally require hours of editing and professional expertise, all accomplished with just a few clicks and creative input from you.

Key Benefits of Using Clipfly AI

Time Efficiency

Create professional-quality videos in minutes instead of hours or days. Clipfly AI handles the technical aspects of video production automatically, allowing you to focus on creative direction rather than complex editing tasks.

Accessibility

No prior video editing experience required. The intuitive interface and AI-driven generation process make video creation accessible to beginners and professionals alike, eliminating the steep learning curve associated with traditional editing software.

Creative Freedom

Express your ideas through simple text descriptions or transform your existing images. Clipfly AI interprets your creative direction and generates videos that match your vision, even if you struggle to articulate technical details.

What truly sets Clipfly AI apart is its ability to understand context and creative intent. Unlike template-based video creators that offer limited customization, Clipfly's AI engine interprets nuanced descriptions and generates unique visual content based on your specific instructions. This means each video you create can be truly original, reflecting your particular style and messaging needs.

Additionally, the platform continues to evolve through machine learning, with each generation helping to improve future outputs. As you use Clipfly AI more frequently, you'll discover techniques to refine your prompts and achieve increasingly sophisticated results, even within the free version's capabilities.

Accessing Clipfly AI

Getting Started with Your Account

Before you can begin creating videos with Clipfly AI, you'll need to set up your account and access the platform. Follow these steps to get started:

1. Open your preferred web browser and navigate to **www.clipfly.ai**
2. Locate and click the **"Sign In"** button in the upper right corner of the homepage
3. If you're a new user, select the **"Sign Up"** option to create your account
4. Choose your preferred registration method:
 - Email registration (requires verification)
 - Google account authentication
 - Facebook account authentication
5. Complete the registration form by providing the requested information
6. Agree to the Terms of Service and Privacy Policy
7. Click **"Create Account"** to finalize your registration

Once registered, you'll be automatically logged in and directed to the main dashboard. For future sessions, simply click the "Sign In" button and enter your credentials to access your account. The system offers a "Remember Me" option for convenient access on personal devices.

The free version of Clipfly AI grants immediate access upon registration with no credit card required. You can explore the platform's capabilities and create videos with basic features before deciding whether to upgrade to a premium subscription for additional functionality and removal of watermarks.

Understanding Free Version Limitations

Watermarked Exports

All videos created with the free version will include a Clipfly AI watermark in the corner of the final output. This watermark cannot be removed or repositioned without upgrading to a paid plan.

Resolution Constraints

Export resolution is limited to 720p (1280×720) in the free version. Higher resolution exports such as 1080p Full HD or 4K require a premium subscription.

Asset Library Restrictions

Access to premium music tracks, effects, transitions, and AI-generated elements is limited. Free users have access to a basic library of assets that covers essential needs.

Generation Limits

The free plan includes a monthly quota of AI video generations. Once reached, you'll need to wait for the next billing cycle or upgrade to continue creating videos.

Despite these limitations, the free version of Clipfly AI provides substantial value for users looking to experiment with AI video creation. You'll still have access to the core text-to-video and image-to-video generation features, allowing you to produce creative content for personal use, evaluation, or learning purposes.

Many users find that the free version sufficiently meets their needs, especially for social media content where videos are often shorter and lower resolution is acceptable. The watermark, while present, is designed to be minimally intrusive and doesn't significantly impact the viewing experience of your content.

Additionally, Clipfly occasionally offers promotional increases to free account quotas during special events or platform updates, so keeping your account active can lead to bonus generation opportunities.

Navigating the User Interface

Upon successfully logging into Clipfly AI, you'll be presented with a streamlined, intuitive dashboard designed to help you quickly access all platform features. Understanding the layout will help you navigate efficiently and make the most of your creative time.

Main Dashboard Elements

- **Header Navigation Bar:** Contains your profile information, notifications, help center access, and account settings
- **Create New Video Button:** Prominently displayed in the top-left section, this large button initiates a new project
- **My Projects Gallery:** Displays thumbnails of your previously created videos with sorting options by date, name, or status
- **Templates Section:** Features pre-designed video templates categorized by purpose (promotional, social media, educational, etc.)
- **Recent Activity Feed:** Shows your latest actions and generations for quick reference
- **Resource Usage Indicator:** Displays your current usage of free generation credits and remaining quota

Sidebar Navigation

The left sidebar provides quick access to key sections including:

- **Dashboard:** Returns you to the main overview page
- **My Videos:** Opens your complete video library
- **Templates:** Expands to show template categories
- **Assets:** Provides access to music, effects, and other resources
- **Help Center:** Opens tutorials, guides, and support options
- **Community:** Connects you with other Clipfly users (when available)

The interface is designed with accessibility in mind, featuring high-contrast elements, clear labels, and consistent navigation patterns. Hovering over buttons and icons reveals tooltips with additional information, helping new users familiarize themselves with the platform's capabilities.

Text-to-Video Generation: Basics

Craft Your Text Prompt

Start by writing a detailed description of the video scene you want to create, including visual elements, mood, actions, and style preferences.

Select Generation Options

Choose your preferred style (cinematic, animated, realistic), video duration, and aspect ratio from the available options.

Generate Your Video

Click the "Generate" button and allow Clipfly AI to process your text prompt, creating a video that matches your description.

Review and Customize

Once generation is complete, preview your video and make adjustments using the editing tools provided.

Text-to-video generation is the cornerstone feature of Clipfly AI, allowing you to create videos using nothing but written descriptions. This technology interprets your words and transforms them into visual sequences that match your creative intent.

When crafting your text prompt, be as specific as possible about what you want to see. Include details about setting, characters, actions, colors, lighting, camera movement, and mood. For example, instead of writing "a beach scene," try "a serene tropical beach at golden hour with gentle waves washing ashore, palm trees swaying in the breeze, and a distant sailboat on the horizon."

The AI responds particularly well to sensory language and emotional descriptors. Terms like "vibrant," "melancholic," "energetic," or "dreamy" help set the tone for your video. You can also reference specific visual styles such as "cinematic," "documentary-style," or "animation" to guide the aesthetic direction.

Remember that while the free version has some limitations, you can still create impressive videos by mastering the art of effective prompt writing. Experiment with different descriptions to discover what produces the best results for your specific needs.

Crafting Effective Text Prompts

Be Detailed and Specific

Include visual elements, colors, lighting, movement, and atmosphere in your descriptions. The more detail you provide, the closer the AI can match your vision.

Structure Your Description

Organize your prompt from general to specific, starting with the scene setting, then adding characters, actions, and special elements.

Specify Style and Mood

Mention artistic influences, film genres, or emotional qualities to guide the aesthetic direction of your video.

Avoid Ambiguity

Use clear, concrete language rather than abstract concepts that could be interpreted in multiple ways.

Example Prompts and Their Effectiveness

Basic Prompt	Enhanced Prompt
"A city at night"	"A bustling metropolitan cityscape at night with glittering skyscrapers, neon signs reflecting in rain-slicked streets, and streams of car headlights moving through the avenues"
"A person walking in nature"	"A young hiker in a red jacket traversing a misty pine forest trail at dawn, with golden sunlight filtering through the trees and morning dew glistening on ferns"
"Coffee being made"	"An artisanal coffee preparation sequence with close-ups of freshly roasted beans being ground, hot water being poured in slow circular motions over a filter, and rich brown coffee dripping into a clear glass carafe"

When describing movement or progression, use clear temporal indicators like "first," "then," or "gradually" to help the AI understand the sequence of events. For example: "A seed sprouts from soil, then gradually grows into a seedling, finally blooming into a vibrant red flower that sways gently in a spring breeze."

Remember that the free version may have some limitations in interpreting extremely complex prompts. If your first generation doesn't match your vision, try breaking down complex scenes into simpler elements or focus on the most important visual aspects you want to capture.

Image-to-Video Conversion

Image-to-video conversion is Clipfly AI's powerful feature that breathes life into static images by adding motion, effects, and dynamic elements. This functionality is particularly useful for animating product photos, creating moving backgrounds from landscapes, or adding subtle movement to portraits.

How to Convert Images to Videos

1. **Start a New Project:** From the dashboard, click "Create New Video" and select the "Image to Video" option from the creation menu
2. **Upload Your Image:** Click the upload area to select an image from your device, or drag and drop the file directly into the designated zone
 - Supported formats include JPG, PNG, and WEBP
 - For best results, use high-resolution images (at least 1280×720 pixels)
 - Ensure your image is clear and well-lit
3. **Add Motion Direction:** Enter a text prompt describing how you want the image to animate
 - Example: "Make the clouds move slowly across the sky" or "Create a gentle zoom in effect focusing on the main subject"
4. **Select Animation Style:** Choose from available animation presets like "Subtle," "Dynamic," or "Cinematic"
5. **Adjust Duration:** Set how long you want the animated sequence to last (free version typically allows up to 15 seconds)
6. **Generate Video:** Click the "Generate" button to process your image and create the animated version

The quality of your source image significantly impacts the final video output. Images with clear separation between foreground and background elements tend to produce the best results, as the AI can more easily identify distinct components to animate. For portraits or subjects with people, ensure faces are clearly visible and well-lit for optimal animation.

While the free version has some limitations in animation complexity and duration, it still offers impressive capabilities for bringing static images to life with professional-looking movement and effects.

Tips for Successful Image Animation

Image Selection Best Practices

- Choose images with clear foreground and background separation
- Use high-resolution photos (minimum 1920×1080 for best results)
- Avoid images that are already heavily edited or have artificial effects
- Select images with natural elements that would logically move (water, clouds, trees)
- Ensure proper lighting—well-lit images produce better animations

Effective Animation Prompts

- Be specific about which elements should move ("Make the flowers sway gently")
- Indicate direction of movement ("Move clouds from left to right")
- Specify speed and intensity ("Create subtle, slow ripples in the water")
- Mention camera movements if desired ("Slowly zoom in on the central figure")
- Reference natural physics ("Make hair flutter as if in a light breeze")

Animation Styles and Their Applications

Style	Characteristics	Best Used For
Subtle	Minimal movement, gentle effects	Professional portraits, product photos, architectural images
Natural	Realistic physics-based movement	Landscapes, nature scenes, realistic environments
Dynamic	More pronounced movement, energetic	Sports images, action shots, promotional content
Cinematic	Film-like movements, dramatic lighting changes	Storytelling, emotional scenes, dramatic portraits

When animating portraits or images with people, the AI is particularly good at adding subtle facial movements like blinking or slight head turns. However, for the most natural results, don't overdo these effects—specify "subtle" or "minimal" facial animation in your prompt.

The free version of Clipfly AI may have limitations on certain complex animations, particularly those requiring advanced 3D interpretation or complete scene reconstruction. Focus on simpler, more achievable animations to get the best results within the free tier's capabilities.

Working with the Video Editor

After generating your video through either text-to-video or image-to-video methods, Clipfly AI provides a surprisingly robust editing interface that allows you to refine and enhance your creation. Understanding this editor is crucial for producing polished final videos.

Editor Interface Components

- **Preview Window:** Displays your video in real-time with playback controls
- **Timeline:** Shows the sequence of your video with all elements represented chronologically
- **Media Library:** Contains your generated video segments, uploaded assets, and available stock media
- **Tools Panel:** Features editing tools including trim, split, speed adjustment, and filters
- **Properties Panel:** Displays settings for the currently selected element
- **Audio Controls:** Manages soundtrack, voiceover, and sound effects

Basic Editing Functions

1. **Trimming:** Adjust the start and end points of your video by dragging the handles on the timeline or using the trim tool
2. **Splitting:** Divide your video into separate segments that can be individually edited or rearranged
3. **Rearranging:** Drag segments on the timeline to change their order (useful when combining multiple generated clips)
4. **Speed Adjustments:** Modify playback speed to create slow-motion or time-lapse effects
5. **Transitions:** Add visual transitions between clips from the transitions panel

While the free version doesn't include all premium editing features, it provides sufficient tools to create professional-looking videos. You can perform essential edits like trimming unwanted sections, adjusting playback speed, and adding basic transitions between scenes.

Remember to save your project frequently using the save button in the top navigation bar. The free version typically saves your projects for up to 7 days, after which they may be archived or removed from active storage.

Adding Text and Captions

Access Text Tools

Click the "Text" button in the editor toolbar to open the text panel with various text options and templates.

Choose Text Type

Select from options like title, subtitle, caption, or custom text based on your needs.

Enter Your Content

Type your text in the text editor, applying formatting as needed through the available controls.

Customize Appearance

Adjust font, size, color, opacity, and animation effects to match your video's style.

Adding text to your videos significantly enhances their informational value and accessibility. Clipfly AI's text tools allow you to create professional-looking titles, subtitles, captions, and text overlays that complement your visual content.

Text Animation Options

Even in the free version, Clipfly AI offers several text animation styles to make your captions and titles more engaging:

- **Fade:** Text gradually appears or disappears
- **Slide:** Text enters or exits by sliding from a direction
- **Scale:** Text grows or shrinks into view
- **Typewriter:** Text appears character by character as if being typed
- **Bounce:** Text bounces into position with a playful animation

For maximum readability, follow these caption best practices:

- Use sans-serif fonts for better on-screen legibility
- Maintain high contrast between text and background
- Keep text concise and break long sentences into multiple captions
- Position text away from important visual elements
- Consider adding a semi-transparent background or drop shadow for text over busy scenes

While the free version has some limitations on premium fonts and advanced text animations, the available options are more than sufficient for creating professional-looking titles and informative captions that enhance your video's impact.

Adding Audio and Music

Audio plays a crucial role in creating engaging videos. Clipfly AI's free version provides several options for adding and customizing audio elements to enhance your video's impact and emotional resonance.

Types of Audio You Can Add

- **Background Music:** Instrumental tracks that set the mood and pace of your video
- **Sound Effects:** Brief audio clips that emphasize actions or transitions
- **Voiceover:** Narration that provides context or explanation for your visual content

Adding Background Music

1. Click the "Audio" or "Music" button in the editing toolbar
2. Browse the available royalty-free music library
 - Filter by mood (happy, sad, inspirational)
 - Filter by genre (pop, electronic, acoustic)
 - Filter by tempo (slow, medium, fast)
3. Preview tracks by clicking the play button next to each option
4. Select your preferred track and click "Add to Timeline"
5. Adjust the volume using the audio mixer or timeline controls
6. Trim the music to fit your video length if necessary

Recording Voiceover (When Available)

1. Select the "Voiceover" option from the audio menu
2. Click the record button when ready to begin recording
3. Speak clearly into your device's microphone
4. Click stop when finished
5. Review your recording and re-record if necessary
6. Position the voiceover on the timeline to synchronize with your visuals

The free version includes access to a selection of royalty-free music tracks and basic sound effects. While premium subscribers have access to an expanded library, the free options still provide quality audio choices for most video projects. All included audio is cleared for personal and commercial use within Clipfly's terms of service.

For the best audio experience, maintain appropriate volume balance between different audio elements. Background music should generally be set at 20-30% volume when voiceover is present, ensuring narration remains clearly audible.

Customizing with Effects and Filters

Clipfly AI's free version includes a variety of visual effects and filters that can dramatically enhance the look and feel of your videos. These tools allow you to establish a consistent visual style, evoke specific moods, or add creative flair to your content.

Applying Video Filters

1. Select the video clip on your timeline that you want to modify
2. Click the "Filters" button in the editing toolbar to open the filters panel
3. Browse through available filter categories:
 - Cinematic (film-inspired color grading)
 - Vintage (retro and nostalgic looks)
 - Modern (contemporary, clean aesthetics)
 - Black & White (monochrome variations)
4. Click on a filter to preview it on your video
5. Adjust the intensity slider to control how strongly the filter is applied
6. Click "Apply" to confirm your selection

Adding Visual Effects

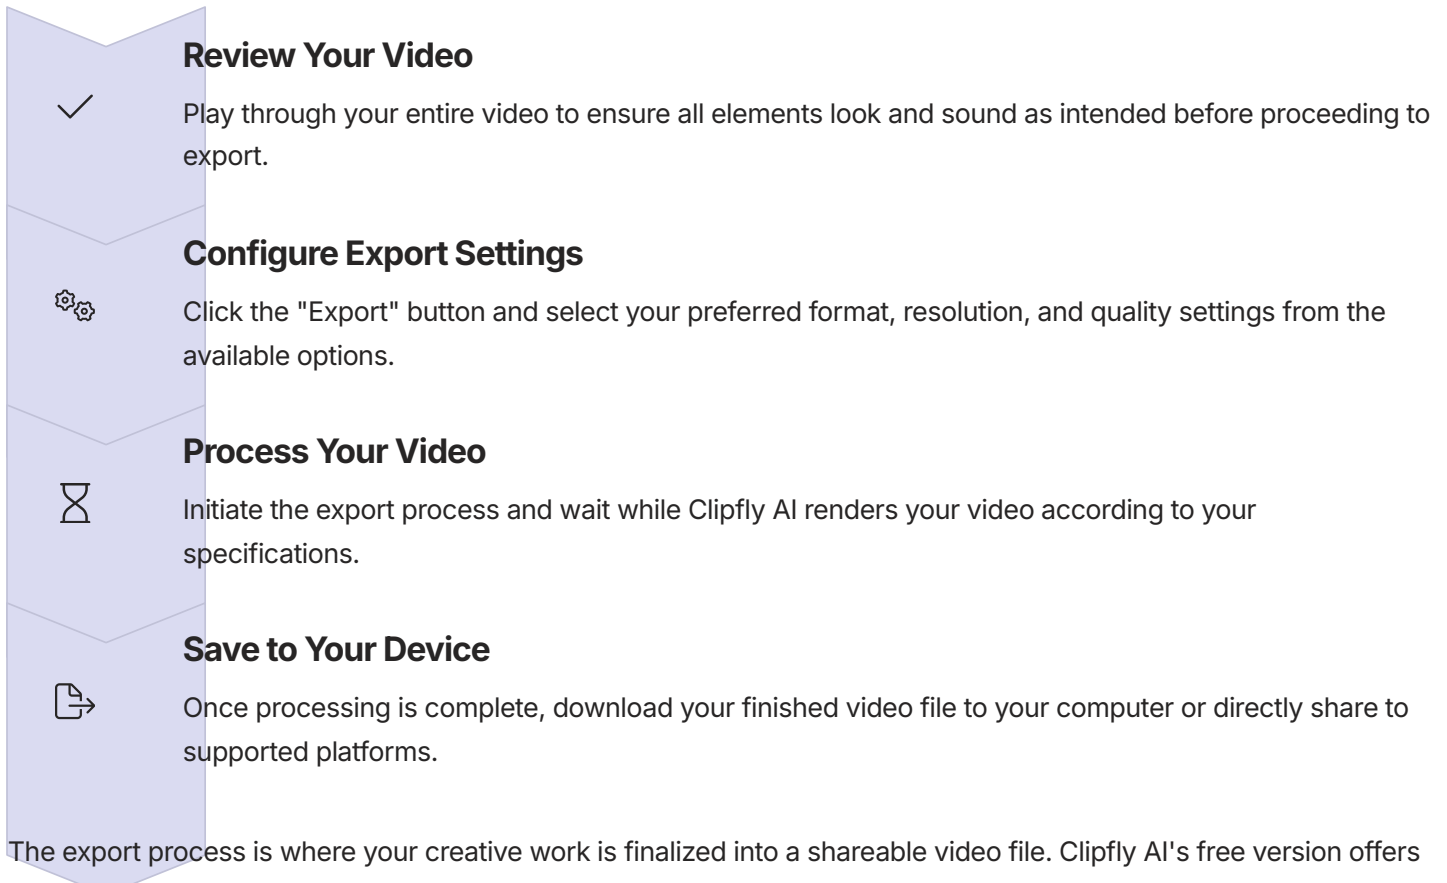

The free version includes basic visual effects that can add dynamic elements to your videos:

- **Light Leaks:** Simulated light flares that add warmth and texture
- **Overlays:** Texture elements like film grain, dust, or subtle patterns
- **Vignette:** Darkened edges that draw attention to the center of the frame
- **Blur Effects:** Selective blurring for depth or focus effects

Effects can be applied using a similar process to filters, with each effect having its own customization options for intensity, position, or animation. While premium effects offer more advanced options like particle systems or 3D elements, the free effects still provide significant creative possibilities.

For professional-looking results, use effects and filters sparingly and consistently throughout your video. Dramatic or heavily stylized effects work best when they serve the narrative purpose of your content rather than being applied simply for visual impact.

Exporting Your Video

The export process is where your creative work is finalized into a shareable video file. Clipfly AI's free version offers a straightforward export workflow with several options despite some limitations compared to premium tiers.

Free Version Export Limitations

- **Resolution Cap:** Videos are limited to 720p (1280×720) maximum resolution
- **Watermark:** A small Clipfly AI logo appears in the corner of the video
- **File Format Options:** Limited to MP4 format with H.264 encoding
- **Bitrate Restrictions:** Maximum bitrate capped for optimal file size vs. quality balance
- **Export Queue Priority:** Standard processing priority (premium users may receive faster processing)

Despite these limitations, free version exports still produce professional-quality videos suitable for most personal use cases, social media sharing, and demonstration purposes. The watermark is designed to be minimal and non-intrusive, positioned discreetly in the corner of the frame.

Export times vary depending on video length, complexity, and current server load. Simple 30-second clips typically process within 5-10 minutes, while more complex videos may take longer. You'll receive a notification when your export is complete and ready for download.

Clipfly AI stores your exported videos in your account for a limited time (typically 14 days for free users), so it's recommended to download them promptly to your local device for permanent storage.

Sharing Your Videos

Once you've exported your video, Clipfly AI offers several convenient options for sharing your creation with your audience. The platform integrates with popular social media channels and provides direct links for easy distribution.

Direct Sharing Options

After your video export is complete, the following sharing options become available:

- **Download to Device:** Save the video file directly to your computer or mobile device
- **Copy Link:** Generate a temporary viewing link that can be shared via email, messaging apps, or social media
- **Social Media Integration:** Share directly to connected platforms including:
 - YouTube (as unlisted or public)
 - Facebook
 - Instagram (if appropriate length/format)
 - Twitter
- **Email:** Send the video directly via email using the built-in sharing tool

Optimizing for Different Platforms

For best results when sharing to specific platforms, consider these recommendations:

Platform	Recommended Aspect Ratio	Ideal Length
YouTube	16:9 (Landscape)	3-10 minutes
Instagram Feed	1:1 (Square) or 4:5 (Portrait)	30-60 seconds
Instagram Stories/Reels	9:16 (Vertical)	15-30 seconds
Facebook	16:9 or 1:1	1-3 minutes
Twitter	16:9	15-60 seconds

While the free version of Clipfly AI doesn't include the advanced sharing analytics available to premium users, you can still track basic performance metrics through the individual social media platforms where you share your content.

Remember that videos created with the free version will include the Clipfly AI watermark. This is generally accepted on social platforms but may not be suitable for professional commercial use. For watermark-free videos and additional sharing options, consider upgrading to a premium subscription.

Best Practices for AI Video Creation

Start Simple, Then Expand

Begin with straightforward video concepts before attempting more complex scenarios. This allows you to understand the AI's capabilities and limitations. As you gain experience, gradually incorporate more detailed prompts and advanced features.

Iterate and Refine

Don't expect perfect results on your first attempt. Use each generation as a learning opportunity to refine your prompts. Small adjustments to wording or specificity can dramatically improve results in subsequent generations.

Maintain Consistent Style

For multi-scene videos, use consistent stylistic language in your prompts to ensure visual coherence. Reference the same lighting, color palette, or filming style across different prompts for a unified look.

Combine Generation Methods

Mix text-to-video and image-to-video approaches for the best results. Use text generation for scenes difficult to source as images, and image animation for elements where you need precise control over the visual starting point.

Planning Your AI Video Projects

Successful AI video creation begins with thoughtful planning:

1. **Define Your Objective:** Clearly identify the purpose of your video and the message you want to convey
2. **Create a Simple Storyboard:** Sketch out the key scenes or moments you want to include
3. **Prepare Your Prompts:** Write detailed descriptions for each scene, focusing on visual elements
4. **Organize Your Assets:** Gather any images, audio files, or text elements you'll need
5. **Allocate Time for Iteration:** Plan for multiple generation attempts to achieve your desired results

The most effective Clipfly AI users approach the platform with both creativity and patience. Understanding that AI video generation is still an evolving technology helps set realistic expectations while appreciating the remarkable capabilities already available.

For longer videos, consider creating individual segments separately and then combining them in the editor. This approach gives you more control over each section and helps manage the complexity of your prompts.

Troubleshooting Common Issues

Slow Generation Times

Generation may take longer during peak usage periods or for complex prompts. Try simplifying your description or breaking it into smaller segments. Consider generating during off-peak hours when the system has more available resources.

Unexpected Visual Results

If the generated video doesn't match your expectations, revise your prompt to be more specific. Address ambiguities in your language and add more concrete details about the visuals you want to see.

Export Failures

If your video fails to export, check your internet connection and try again. For persistent issues, try reducing the video length or complexity, as this can sometimes resolve processing limitations.

Interface Glitches

If you encounter interface issues, try refreshing your browser or clearing your cache. Ensure you're using a supported browser (Chrome, Firefox, or Safari) updated to the latest version.

Content Moderation Issues

Clipfly AI includes content safety filters that may reject certain types of prompts:

- **Restricted Content:** Prompts containing violent, explicit, or otherwise prohibited content will be automatically rejected
- **Copyrighted Material:** Requests for specific copyrighted characters or properties may be filtered
- **Over-complex Prompts:** Extremely long or confusing prompts may time out or produce unexpected results

If your generation is rejected due to content policies, revise your prompt to remove potentially problematic elements while preserving your creative intent.

Getting Support

When encountering persistent issues, free users can access support through several channels:

- **Help Center:** Browse the knowledge base for tutorials and solutions to common problems
- **Community Forum:** Connect with other users who may have experienced and resolved similar issues
- **Email Support:** Submit a support ticket for technical issues (note that response times may be longer for free users)

Remember to provide clear details when reporting issues, including your browser type and version, the specific action you were attempting, and any error messages received. Screenshots or screen recordings can be particularly helpful for troubleshooting.

Free vs. Premium Features Comparison

Feature	Free Version	Premium Version
Video Generation Credits	Limited monthly allocation	Significantly higher allocation
Maximum Resolution	720p (HD)	Up to 4K
Watermark	Yes, Clipfly logo present	No watermark
Video Length	Up to 30 seconds	Up to 3 minutes or more
Stock Media Access	Basic library	Full premium library
Advanced Editing Tools	Limited selection	Complete toolset
Export Formats	MP4 only	Multiple formats
Priority Processing	Standard queue	Priority rendering
Project Storage	7 days	Unlimited
Customer Support	Email, limited hours	Priority support, extended hours

While the free version provides impressive capabilities for casual users and those exploring AI video creation, premium subscriptions unlock significantly enhanced features for professional and high-volume use cases. The primary limitations of the free version—the watermark, resolution cap, and generation limits—are specifically designed to provide a fully functional experience while reserving advanced capabilities for paying subscribers.

Clipfly AI offers several premium subscription tiers beyond the free version, including monthly and annual billing options with varying levels of generation credits, resolution capabilities, and advanced features. Users who regularly create videos or need professional-quality outputs without watermarks will find the premium tiers offer substantial value for their creative workflows.

The good news is that all projects created in the free version remain fully compatible if you later upgrade to a premium subscription. This means you can experiment with the platform using the free tier and seamlessly transition to premium features without losing access to your previous work or needing to recreate projects.

Getting Started: Your First Project

Account Setup

If you haven't already, create your free Clipfly AI account at www.clipfly.ai by clicking "Sign Up" and following the registration process. Verify your email address to activate all features.

Explore The Dashboard

Take a few minutes to familiarize yourself with the dashboard layout. Click through the main sections and hover over buttons to see tooltips explaining their functions.

Create Your First Video

Click the "Create New Video" button and select either text-to-video or image-to-video based on your preference. For a simple first project, try a text prompt like "A serene mountain landscape with flowing river and gentle clouds moving across a blue sky" or upload a landscape photo for animation.

Experiment and Learn

Use this first project as a learning opportunity. Try different editing tools, add text and music, and get comfortable with the export process. Don't worry about creating something perfect—focus on exploring the platform's capabilities.

As you embark on your Clipfly AI journey, remember that the most successful users are those who approach the platform with curiosity and creativity. The intersection of artificial intelligence and creative expression offers exciting possibilities that continue to expand as the technology evolves.

While this manual provides a comprehensive introduction to Clipfly AI's free version, the best way to understand the platform's capabilities is through hands-on experimentation. Each video you create will build your understanding of effective prompts, editing techniques, and the unique creative potential of AI-assisted video production.

If you find Clipfly AI valuable for your creative projects, consider exploring the premium features through a trial or subscription. As your skills develop, you may discover that the advanced capabilities of premium tiers allow you to realize even more ambitious creative visions.

We hope this manual serves as a helpful companion as you explore the world of AI video creation with Clipfly. Happy creating!
