

Catering Controllers / Quartz Lamp Controllers

**17A 230v Quartz Lamp Phase
Angle Regulator 4kW New model**
SKU: A12217E

Catering controllers / quartz lamp controllers are devices that regulate the power and temperature of catering equipment and quartz lamps. They are designed to provide optimal performance, safety, and efficiency for various applications in the catering industry.

Some of the benefits of using catering controllers / quartz lamp controllers are:

- They can control the heat output of quartz lamps, which are used to keep food warm and enhance its appearance.
- They can adjust the fan speed of ventilation systems, which is essential for maintaining a comfortable and hygienic environment in the kitchen.
- They can vary the voltage and current of electric grills, ovens, fryers, and other cooking appliances, which can improve the quality and consistency of the food.
- They can protect the equipment from power surges, spikes, harmonics, and electromagnetic interference, damaging the components and reducing their lifespan.
- They can save energy and reduce costs by optimizing the power consumption and efficiency of the equipment.

United Automation is a leading manufacturer and supplier of catering controllers / quartz lamp controllers. They offer a wide range of products that can suit different needs and specifications.

REASONS TO BUY

- You can improve the quality and appearance of your food by controlling the heat output of quartz lamps and infrared heaters. These devices can keep your food warm and enhance its colour and texture.
- You can save energy and reduce costs by optimizing your catering equipment's power consumption and efficiency. These devices can vary the voltage and current of electric grills, ovens, fryers, and other cooking appliances, which can lower your electricity bills and carbon footprint.
- You can protect your equipment from damage and extend its lifespan by using these devices. They can shield your equipment from power surges, spikes, harmonics, and electromagnetic interference, which can harm the components and reduce their performance.

You can customize your catering controller / quartz lamp controller according to your needs and specifications. United Automation offers a wide range of products that can suit different applications and requirements. We also provide technical support, bespoke design solutions, and quality products.

If you are interested in buying a catering controller / quartz lamp controller from United Automation, you can visit their website or contact us directly . We will be happy to assist you with your purchase.

APPLICATIONS

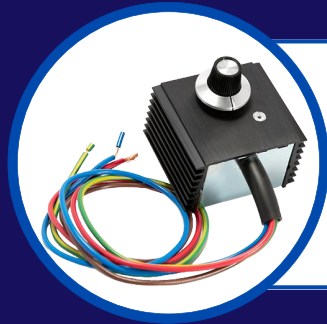

- Controlling the heat output of quartz lamps and infrared heaters, which are used to keep food warm and enhance its appearance. These devices can be used in restaurants, buffets, catering vans, and other food service settings.
- Adjusting the fan speed of ventilation systems, which is essential for maintaining a comfortable and hygienic environment in the kitchen. These devices can be used in commercial kitchens, industrial kitchens, and other cooking facilities.
- Varying the voltage and current of electric grills, ovens, fryers, and other cooking appliances, can improve the quality and consistency of the food. These devices can be used in bakeries, pizzerias, fast food outlets, and other culinary establishments.
- Protecting the equipment from power surges, spikes, harmonics, and electromagnetic interference, which can damage the components and reduce their lifespan. These devices can be used in any setting where power quality and reliability are important.
- Saving energy and reducing costs by optimizing the power consumption and efficiency of the equipment. These devices can be used in any setting where energy management and sustainability are a priority.
