# WHAT IS THE CLCPA?

The Climate Leadership and Community Protection Act (CLCPA) is a radical restructuring of how New Yorkers will be allowed to use energy throughout the state.

**By 2025**, ONLY electric heating systems can be installed in all newly constructed single-family homes and new businesses.<sup>1 (p.187)</sup>

**In 2030**, new furnaces using natural gas, propane and oil will be banned for at-home heating and other needs, even in existing construction.<sup>1 (p.121)</sup>

Without a choice, homeowners could face full-electric transition costs between **\$20,000-\$41,000**.<sup>1 (p.193)</sup>

New York will likely enforce electric-only usage through your local municipality's building codes and zoning laws.

Families, businesses, and the reliability of our electric grid will all be directly and negatively impacted.

**The CLCPA requires drastic measures that pose a serious threat to the livelihoods of New York residents.**

# TOO RADICAL

The governor's proposed "cap-and-invest" will be the largest tax introduced to all New Yorkers. It will drastically inflate consumer energy prices since every sector of our economy relies heavily on fossil fuels.

**The CLCPA goes too far,** eliminating energy choice and putting New Yorkers at risk.

**Loss of electricity and sub-zero temperatures** leaves the death toll at 47 from Buffalo, NY blizzard.<sup>2</sup>

**New York State's ban on gas stoves** and all fossil fuel appliances is a disaster waiting to happen.

## UNSAFE:

- Increasing electrical demand too quickly could cause rolling blackouts, brownouts, and power shortages, putting New York residents in danger during heat waves and winter storms.<sup>2,3</sup>

## UNRELIABLE:

- Transitioning every car, truck, home and building to an electric grid using more intermittent sources without upgrading infrastructure puts an unrealistic burden on an already unreliable system.<sup>4</sup>

## UNAFFORDABLE:

- Net Direct Costs from 2020-2050 for the New York energy transition are estimated to be almost \$500 billion dollars.<sup>1 (p.131)</sup>
- Low- and medium-income households simply can't afford a costly, full electric conversion between \$20,000-\$41,000, especially when a fossil fuel boiler/furnace costs \$10,000 or less.<sup>1 (p.193)</sup>

# THE CLCPA OUTLINES **UNREALISTIC** BENCHMARKS

## 2030

**Homeowners will be prohibited from replacing heating systems** that use natural gas, oil, or propane.<sup>1 (p.121)</sup>

**WBEN RADIO BUFFALO: WESTERN NEW YORK DEMOCRATS SPEAKING OUT ON STATE'S PROPOSED NATURAL GAS BAN**

02/24/23 — BY: BRAYTON J WILSON

## 2040

**Electrification for nearly every building in the state** in order to achieve 100% zero-carbon emission electricity.<sup>1 (p.51)</sup>

# **TAKE CONTROL OF YOUR ENERGY FUTURE TODAY**

Our power grid is not ready for a full electrification mandate. We need a smarter energy policy that supports affordable energy, reliable energy, and energy choice.

**Say no to the implementation of the Climate Leadership and Community Protection Act.**

Let Governor Hochul and your County Leaders know that New Yorkers value energy choice and do not want to take on unnecessary costs, increased outage risks, and decreased grid reliability.
