SAFETY STORE

Come visit our safety store located here in Tullamore, Co. Offaly, where there is a wide range of working at heights, confined space and rescue equipment on display. We have recently opened up our new office and warehouse in Belfast. See back of catalogue for location details.

Our servicing team and sales staff will be available to help with any enquiries and show products relevant to your safety needs.

ASBESTOS DECONTAMINATION

Trade Safety are associated partners with Thermanc and suppliers of Decontamination, and Surface Preparation Equipment, providing Equipment, Consumables, RPE, PPE, Equipment Servicing and RPE Face fitting to a wide range of industries and sectors

Decontamination Units

Modular Decontamination Unit

Twin Shower Decontamination Unit

Welfare Decontamination Unit

Decontamination is a combination of processes that removes or destroys contamination so that infectious agents or other contaminants cannot reach a susceptible site in sufficient quantities to initiate infection, or other harmful response

Negative Pressure Units

A Negative Pressure Unit (NPU) creates a negative pressure that minimizes the spread of dust from the construction work. In this way, the work environment is improved and the need for final cleaning is reduced.

H Type Vacuums

H Type Vac 17.5l & 35.0l

H Type Wet Vac

Thermac H Type Vacuums are efficient, reliable, fully-compliant solution for use in the asbestos removal and construction sectors.

They remove potentially contaminated water and debris from asbestos enclosures or flooded sites

Blast Units

Blast & Breathe Trailer

Trailer Mounted Blast Unit

Dustless Blasting System

Blasting is generally a dry process. However, depending on the method, it is classified into several types such as sandblasting, blower blasting, and shot blasting. It is also used for various purposes such as rust removal, cleaning, and polishing

ATEX LIGHTING

Atex Generally refers to the hazard of explosive atmospheres occurring in the workplace due to the presence of flammable gasses or combustible dust mixed in air, which can give rise to the risk of explosion.

Any area that is not classified as zone 0, 1 or 2 is deemed to be non-hazardous, as flammable atmospheres are not expected to be present. Special precautions for the construction and use of electrical apparatus or for the control of non-electrical ignition sources are therefore not required although such an area may still be part of a greater restricted area.

ANCHORAGE

An anchor point is a point of attachment for a fall arrest system. They are usually found at the top or on the side of a building and serve as a secure and safe way to ensure that those who are working on elevated surfaces will be protected from any potential falls.

Anchor points are important as they allow for the installation of fall arrest systems. These are systems that prevent injuries and fatalities when working at height.

Overnet

Installing OVERNET is convenient: it is easily installed outdoors on trapezoidal metal sheets or trapezoidal sandwich panels and is supplied in 25 m rolls.

OVERNET is a complete system composed of: fall protection net, fastening plates, EPDM gaskets and rivets. Its strength and durability are made excellent by the combination of zinc plating, primer and PVC.

A large, dark-colored industrial air mover unit is shown. It features a prominent circular fan grille on the front and a handle on top. The unit is positioned in a dimly lit environment, possibly a confined space.

AIR MOVERS

This can be used as a stand-alone item to simply cause a through airflow or be linked to trunking to introduce clean air into the system from outside of the confined space.

These units can be much more productive than a traditional fan and do not pose the same electrical issues.

Provide a portable, trailer mounted air source for breathing quality air.
 Available in 2 sizes - 4 & 8 personnes

CONNECTORS

A connector is designed to be weighted along its primary axis, with the gate closed and locked. This is the connector's strongest position. All other positions increase the risk of a break or accidental opening, and therefore present a danger to the user.

Connectors move around when used, are pulled by the rope, bump up against the rock, and vibrate when you are on the move. Regularly check that the carabiner has not moved into a dangerous position and that the locking system stays closed in spite of vibrations.

A worker wearing a red protective suit, a respirator mask, and gloves is positioned inside a confined space, likely a large industrial tank or vessel. The worker is looking towards the camera. The environment is filled with metal structures, pipes, and equipment. The text "CONFINED SPACE" is overlaid in large white letters across the center of the image.

CONFINED SPACE

Confined Space Kits provided basic equipment to assist in confined space entry and egress. The presence of a hazardous atmosphere is a major threat to workers in confined spaces.

NEW CONFINED SPACE UNIT **NEW**

New Addition to Our Training Fleet!

We are excited to announce the addition of a state-of-the-art vehicle designed specifically for confined space training and working at heights training. This versatile training unit is equipped with the latest technology and safety features, offering a realistic and hands-on experience for participants to enhance their skills and confidence in challenging environments.

Whether you're looking to upskill your team or meet compliance requirements, this new vehicle is the perfect solution to deliver comprehensive, practical training.

Contact us today to book your training session and take advantage of this cutting-edge resource!

FALL ARREST

Fall arrestors are anchored above the user, it gives the user a safe area of work.

The retracting line pays in and out of the device as the user moves. In the event of a fall, a brake engages, arresting the fall of the user with a controlled deceleration force.

GAS DETECTION

Confined space gas detectors are designed to ensure occupational health and safety compliance and to protect personnel from exposure to harmful fues, gases, vapours or lack of oxygen.

A personal multi gas monitor can also be used to track the concentration of combustibile gases amd alert users if concentrations approach the Lower Explosive Limit (LEL). Therefore, mititgating the risk of potentially fatal ignition

HARNESSES

Harnesses are used in almost all types of confined space work because safety teams are required to have a method of removing an injured worker in the event of an accident.

Harnesses can also be utilized as fall protection device. Wearing the harness, comprised of a system of straps and restraints, the risk of injury caused by potential fall is reduced

- Works on 12 mm Diameter Polyester Kermantle Rope Anchorage Line

PORTABLE GANTRIES

Portable Gantry is the ultimate confined space access equipment. It is lightweight portable and can be quickly deployed for use in emergency rescue situations.

KSB SERIES

Aluminium Gantry Crane “KSB Series” is a complete, lightweight, fully customizable, portable device designed for lifting loads up to the related working load limit (WLL).

These Gantries is ideal for lifting applications such as confined spaces, silos, rooftops, lift-shafts, water treatment works and clean environments

SWL KSB: 500kg
 Total weight of Gantry KSB: 58kg
 Beam Length: 2m/3m
 Trolley Included

LSB SERIES

Aluminium gantry crane “LSB series” is a complete, lightweight, fully customizable (modular design), portable and flexible device designed to be used in variety of lifting applications such as, drainage wells, reservoirs, wells, silos, rooftop, lift-shaft, waste water and many more.

For faster device installation additional tools are not needed (device installation.

Beam LSB: from 2 to 7 meters.

Trolley Available

LSB Working Load Limit (WLL): from 500kg up to 2000kg (depends on configuration - please see LSB Technical Data Table).

RESCUE DAVIT SYSTEMS

Davit Arm Systems for Confined Space Applications. They are commonly used to raise, lower, and suspend personnel performing routine work duties or to facilitate rescues in vertical confined space applications such as vaults, manholes and pump stations.

A manual or mechanical winch to the davit arm system, personnel can be lowered into the confined space or extracted with relative ease.

COUNTERWEIGHT SYSTEM

610mm

A counterweight system is built for when you need to move and access various confined space entry points in the same area.

1200mm

Consisting of a central base unit with a number of options for anchoring, positioning, leg adjustment and extension, this is a system designed for versatility.

We also have the static counterweight trolley available .

H BASE DAVIT SYSTEM

A free-standing system is perfect when you need to move the davit and access different confined space entry points in the same area.

The portable wheeled lower base allows for adjustment to accommodate the width and lengths of most standard confined spaces, offering a versatile confined space access solution.

The extendable legs allow for access to wider entries and increase stability.

POLE HOIST SYSTEM

Pole Hoist System is a vertical confined space entry and retrieval fall arrest system. A versatile pole hoist for confined space access

HITCH MOUNT SYSTEM

Hitch Mount System

Hitch mount davit system provides a portable confined space access system with a hitch mount attachment for vehicles, plus other anchor points.

Ideal for use in a sandwich plate anchor and using a “C” clamp for concrete or steel mezzanine floor anchors.

Hitch Mount C Clamp 610mm

Hitch Mount J Clamp 610mm

Hitch mount “J” is a system commonly used for rescue in confined spaces

GUARD RAIL

Guard rail systems are used when an exposed entry point needs to be guarded

This portable system has an integrated mast which is used in conjunction with a davit arm to provide fall protection, entry and retrieval capabilities.

The manhole guard system facilitates access to underground chambers or any other type of confined space where an entry point should be protected

Davit arm is equipped with (2268 kg) anchor point

MANHOLE COLLAR SYSTEM

This system also offers a good solution in situations where there is little space around the manhole. Since the system is mounted on the manhole, very little space is required around the manhole.

In addition to the standard system, a Davit arm with a limited height is also available for situations with limited space above the manhole

DAVIT ARMS

610mm Davit

The Xtirpa 610mm fixed Davit system is used in conjunction with mast IN-2003 and appropriate socket base or manhole guard. Quick and easy 3 pin assembly.

Davit Arm 1200mm is ideal for work areas that require regular set-up and tear-down and where a base can be permanently affixed to an existing structure

1200mm Davit

2400mm Davit

Davit Arm 2400mm is ensuring easy and safe access into a wide variety of confined spaces. This davits versatility offers a solution where other conventional systems are impractical.

GENESI

Genesi SC6NW

- Genesi SC6NW is a mobile anchor device consisting of an extendable arm with a reach of about 600 mm and SC6-PNW support mast, the system is designed to ensure safe vertical access in confined spaces and with limited access and exit

- Genesi SC12NW is a mobile anchor device consisting of an extendable arm with a reach of over 1200 mm and SC12-PNW support pole, the system is designed to make vertical access safe in confined spaces and with limited access and exit

Genesi SC12NW

Genesi SC6F

- Genesi SC6F is a mobile anchor device consisting of a fixed arm with a reach of over 600 mm and an integrated pole

- Genesi SC3 is a compact mobile anchor device, consisting of a fixed arm with a reach of about 300 mm and an integrated mast, particularly suitable for making safe vertical access in confined spaces that have limited space outside

Genesi SC3

Genesi SCTY

- The system has been designed for great flexibility and, depending on the geometry of the access, can be configured or installed to allow for optimum stability to ensure safe access within the confined space or environment with restricted access. The Genesi SCTY system can be set in three different configurations without the need to use specific tools

- BUMP73 is the patented solution that can be used for both wall and floor installation, is made from a single aluminum body to ensure exceptional mechanical and chemical resistance. This base is ideal for all Genesi SC systems. Its light weight and robustness facilitate installation in any context while ensuring a high level of safety and durability.

BUMP

Ground Fixing Configuration

Self-Supporting Configuration

Mounting the elements in a self-supporting configuration allows you to obtain a stable and safe support for installing one of the mobile devices provided and fixing the elements with security PINs

Ground Fixing Configuration

The assembly of the elements in a T configuration with fixing to the ground allows, using the GNSSC-FIXM16 accessory, to fasten the system to the ground via an M16 fixing, the rear extension fixed to the structure by means of an M16 fixing. To mount in this configuration you need an adjustable ground fixing GNSSC-FIXM16

Configuration with Tow Hook Fixing

Mounting the elements in a T configuration with tow hook fixing allows, using the GNSSC-FIXVAN accessory, to attach the system to the tow hook of a suitable vehicle

A collection of safety equipment including a life preserver, ropes, and gear. The background is a dark, slightly blurred image of various safety items like a life preserver, ropes, and gear, with a semi-transparent dark overlay.

RESCUE EQUIPMENT

Confined space equipment is any tool or system that protects, aids or rescues someone who is working inside of a confined space

This can include simple tools like signs, radios, and helmets as well as more complex equipment like gas monitors, manhole pumps, and retrieval gear.

SWISS AIR

Safety never felt so comfortable

Ventilated half mask made of flame-retardant material covers mouth and nose area completely. Positive pressure supports breathing and avoids fatigue.

Infinitely adjustable headband for all sizes from XS to XL.

Y-hose with adjustable neck strap and flexible hose elements guides the air directly into the half mask.

Shoulder harness for ergonomically perfect weight distribution of the super-light filter system (only 550 g).

Powerful TH3 filter unit with innovative, ultra-flat design. Lightweight and comfortable to carry, highly efficient in use.

Blower unit with automatic air flow calibration and Power battery for an uninterrupted working day.

Face Fit Testing

Face Fit testing is a method of ensuring that a facepiece or mask is tight-fitting and seals adequately to the wearer's face. The performance of tight-fitting facepieces depends on achieving continuous contact between the wearer's skin and the seal of the mask

Before The Face Fit Testing Commences

1. Are clean-Shaven for the Face Fit test - this includes any hair growth between the skin and the mask seal
2. Don't smoke or vape, eat, chew gum or drink anything (other than water) for the 30 minutes prior to the test
3. Bring the facepiece, including any filters if used. Trade Safety can supply a mask if not

The Face Fit Test

The test will consist of 7 different exercises, that are simple but will test the mask to make sure there are no leaks present. The test will take 20 minutes in total

A collection of safety equipment including a yellow hard hat, a pair of safety glasses, and a pair of work boots.

SAFETY ACCESSORIES

Confined space equipment is any tool or system that protects, aids or rescues someone who is working inside of a confined space. This can include simple tools like tags, radios, and helmets as well as more complex equipment like gas monitors, manhole pumps, and retrieval gear.

MANHOLE GUARDIAN

Protects open manholes, whilst still allowing full access for the workforce
Designed & Manufactured in the UK

Quick and easy to install

Protects, whilst allowing access to the manhole

- STRONG BUT LIGHT WEIGHT
- QUICK & EASY TO INSTALL & REMOVE
- FITS SQUARE, RECTANGULAR & CIRCULAR MANHOLES
- TESTED & APPROVED BY CERTEX
- UK LTD TO 440kg (PC99)
- CLOSES FOR EASY TRANSPORT

Compact & light weight for easy transportation

- COST EFFECTIVE PROTECTION FOR OPEN MANHOLES
- MANUFACTURED FROM GALVANISED & POWDER COATED STEEL FOR FULL WEATHER PROTECTION
- FULLY ADJUSTABLE, FITS MANHOLES FROM

Adjustable positioning posts to secure Manhole Guardian into place

- 370 TO 900 mm
- PROTECTS THE PUBLIC & YOUR WORKFORCE

Suitable for Square, Rectangle & Round manholes

Designed & Analysed using FEA

Designed & Manufactured in the UK

Tested and certified to 440kg

SKYHOOK

The Skyhook is a mobile fall arrest system that provides overhead anchor points anywhere, any time

The Skyhook offers three overhead anchor points and adding an extendable mast that provides one worker overhead tie-off up to 10.4m in height. Both support a maximum anchor capacity of 140kg

SERVICING

We have specialised workshops with qualified technicians to cater for gas detection, breathing apparatus, tripods, winches, fall arrest blocks and much more.

WHAT WE SERVICE

We provide service for a wide range of
Gas Detection, Breathing Apparatus,
Confined Space and Working at Heights
Equipment.

Call us today to book in your service
