ABOUT US

Bharti A International is a dynamic and innovative company specializing in two diverse sectors: detergent powder manufacturing and scrap trading. Established with a vision to deliver quality and reliability, we have carved a niche in the market by providing exceptional products and services tailored to the needs of our customers.

In the detergent industry, we pride ourselves on producing high-quality, eco-friendly detergent powders that meet international standards. Our products are designed to provide superior cleaning while being gentle on fabrics and the environment. With a focus on innovation and customer satisfaction, we continually strive to improve our formulations and adapt to changing market demands.

OUR PRODUCTS

Detergent Powder

Scrap

Floor Cleaner

Toilet Cleaner

DETERGENT POWDER

DETERGENT POWDER

In our detergent powder, we have active material surfactants:

- **LABSA**: 5% to 28%, depending on the buyer's specifications.
- **Non-ionic surfactants**:
 - APEO
 - AEO
 - AE
- 1% to 2%

Washing Auxiliaries

Washing auxiliaries are included to soften the water and enhance the performance of the active materials, resulting in better detergent effectiveness. The two main ingredients used as washing auxiliaries are:

- **STTD**
- **4A Zeolite** (phosphorus-free and environmentally friendly)

Buffering Agents

We use **Soda Ash Light** in minimal quantities, as excessive amounts are not good for the skin.

Additional Ingredients

Our detergent powder also contains:

- **Synergistic agents**
- **Bleaching agents** (in small quantities)
- **Optical brighteners**
- **Fabric softeners**
- **Perfumes and color**
- **Sodium sulfate** (as a basic element)

SCRAP

SCRAP

Scrap refers to discarded materials or waste products that are no longer in use but can still be valuable if recycled or repurposed. It includes items like old metal, paper, plastic, glass, textiles, and electronic waste, which are often viewed as useless or unwanted. However, these materials hold significant value when processed properly. Recycling scrap reduces the demand for new raw materials, conserving precious natural resources such as forests, water, and minerals. Additionally, it helps decrease the amount of waste sent to landfills, minimizing environmental pollution and promoting sustainability.

The scrap industry is essential in various sectors, including manufacturing, construction, and art. For example, old metal can be melted down to create new products, while paper scrap can be recycled to make new paper products. Scrap also plays an important role in the creative world, where it is often used in art and craft projects, allowing for the creation of unique and eco-friendly pieces. Moreover, the reuse of scrap materials contributes to cost-saving in industries and reduces production expenses.

Proper scrap management and recycling are crucial to supporting a circular economy, where products and materials are continuously reused, reduced, and recycled. This helps in fostering environmental conservation and promoting a greener, more sustainable future.

FLOOR CLEANER

FLOOR CLEANER

Floor cleaners are essential household products designed to maintain cleanliness and hygiene in our homes, offices, and other spaces. They are specially formulated to remove dirt, stains, and bacteria from various types of flooring, including tiles, wood, marble, vinyl, and laminate. Floor cleaners come in different forms such as liquids, sprays, and wipes, offering a variety of options for effective cleaning. These products not only help in maintaining the aesthetic appeal of the floor but also promote a healthier environment by eliminating germs and allergens.

Most floor cleaners contain detergents and disinfectants that break down grease, grime, and dirt, making the floor surface spotless and shiny. Some cleaners are designed for specific types of floors, such as wood-friendly solutions that do not damage the delicate surface. Additionally, many modern floor cleaners are eco-friendly, using natural ingredients to provide a safe and sustainable cleaning option.

Using the right floor cleaner for your floor type ensures that the material is protected from wear and tear while achieving the best cleaning results. Regular cleaning with a good floor cleaner can help preserve the longevity of floors, prevent staining, and keep spaces looking fresh and inviting. Proper usage and following the instructions on the label will yield optimal results.

TOILET CLEANER

TOILET CLEANER

Toilet cleaners are essential cleaning products designed to maintain hygiene and freshness in the bathroom. These cleaners are specifically formulated to clean, disinfect, and deodorize toilets, removing stains, limescale, bacteria, and odors. They are available in various forms, such as liquids, gels, and sprays, offering convenience and ease of use. Most toilet cleaners contain powerful disinfectants and cleaning agents like bleach, which effectively eliminate harmful germs and bacteria, ensuring a sanitary environment.

Toilet cleaners are also equipped with ingredients that help break down tough stains and mineral deposits, like calcium or lime, which can accumulate over time due to hard water. Some toilet cleaners come with special features like fresh fragrances, which leave the toilet smelling pleasant after cleaning. Many modern products are designed to be gentle on surfaces while still providing a strong cleaning effect, ensuring that the toilet's porcelain is not damaged.

Regular use of toilet cleaners is important not only for maintaining a clean toilet but also for ensuring that harmful germs and bacteria are eliminated, preventing potential health risks. By using the right toilet cleaner and following the instructions on the label, you can achieve a clean, fresh, and hygienic toilet every time.
