

Sartoria

Sartoria

The only limit is your imagination: you can design textile solutions exclusively for your facility, choosing materials, technical features and design in line with your philosophy or discover and customize ready-made models, including HiDesign, made by the best international and Made in Italy brands

We cooperate with a network of textile companies and designers carefully selected on the international market, with a focus on Made in Italy, to ensure the highest quality and the respect for the welfare of workers involved in the production chain

All items will be custom made and for professional use, with extreme attention to detail to ensure durability and comfort

You can choose from classic, eco-friendly or extra luxurious yarns, all available with special patented natural antibacterial and fire retardant treatments

On the following pages you will find more detailed information on raw materials, special treatments, and the most innovative trends in the hospitality industry, but if you don't feel like reading don't worry, our team is always available to help you achieve the solutions you've always dreamed of

SuMisura

The only textile product in stock are SafeTowels towels, everything else is made with the SuMisura contractor system

Easy, fast and efficient, designed to create textile solutions that fit like a glove, with designs and technical features created exclusively to reflect your philosophy and help you stand out from the competition

As always, the first step is to listen to your ideas and evaluate together which solutions will allow you to meet your expectations, regulations, and budget

100% cotton

Raw materials

The choice of raw materials is crucial because it determines the strength, durability, environmental impact and cost of products

On the following pages you can discover details of the wide range of available yarns: from the more classic such as cotton or cotton blend, to environmentally sustainable alternatives such as soy, bamboo and hemp, all available with GOTS and Oeko Tex certification

And if luxury is a must noble yarns made from Egyptian cotton, wood fiber or silk

Special Treatments

All yarns can be processed with innovative patented treatments

Antibacterials with copper or silver nanoparticles

EcoSafe, the only 100% natural and chemical free fire-retardant treatment

SAFEZONE

EcoHero

Technical characteristics

Weight, thread count, density, certifications, and special treatments determine the quality, feel, comfort, safety, and, of course, the final cost of products

The options are many, but our experts will guide you step by step until the ideal products are made

Once you have defined your options we will send you fabric samples to touch them with your own hands

Size and design

We will help you take measurements to design items that will fit like a glove and create designs perfect for telling and keeping up with new trends

Quote and test

We will present the technical design with 3D rendering models and a comparative cost estimate

We will send you samples to test them in the field

Production and aftermarket

Only when you are 100% satisfied will we start production

In a short time you will receive the customized products

Of course, we will not leave you alone and will be available for all your needs, including after-sales support and re-stock scheduling

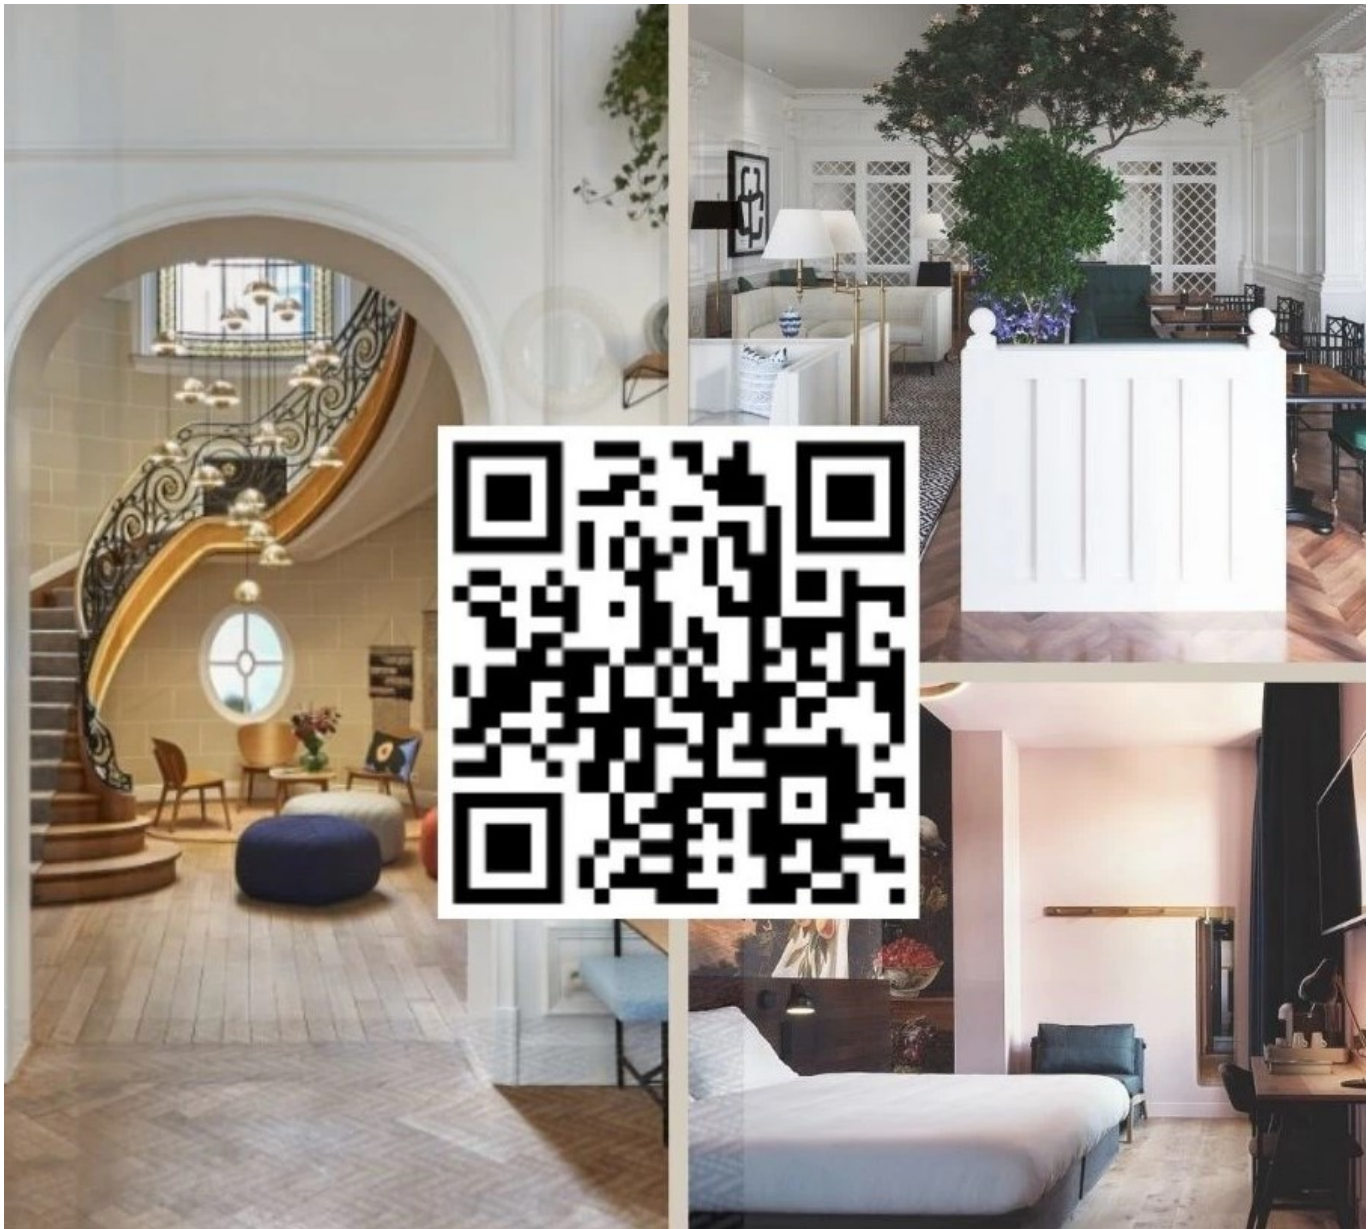

Rent

All textile items are available for operating lease with a fixed daily fee based on the value of selected products

This solution can provide several fiscal and operational advantages: no fixed assets, no need to calculate depreciation, planned, constant and fully deductible fixed costs. products are insured and renewed more frequently to avoid obsolescence

If necessary, we can also include the service of the industrial laundry

In addition to fabrics, you can also rent furniture and table accessories

ShowRoom

A new industry trend is to offer guests the ability to purchase and receive directly to their homes furniture and accessories they tried on during their stay, simply by scanning a QR code

For example, some luxury facilities offer premium bed systems that allow guests to sleep better than at home, with the option of purchasing them directly from the facility.

This or similar solutions can give you the opportunity to choose high-quality furniture and accessories, provide the best service to your guests, and why not, generate a good volume of alternative revenue

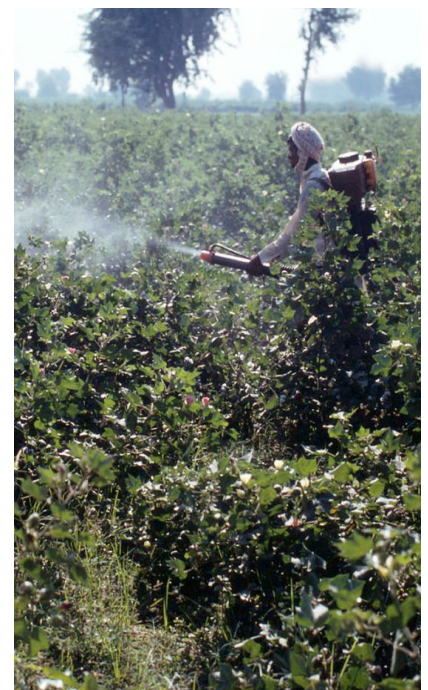

Cotton and low impact alternatives

Cotton is the king of the textile market: it is the most widely grown fiber in the world, has excellent value for money and is the fiber most resistant to frequent industrial washing

Unfortunately, it has a huge environmental impact, its cultivation requires annual and intensive tillage, massive irrigation and tons of chemicals: to get 1 kg of cotton requires 10,000 Lt of water and 2 kg of chemical fertilizers, pesticides and herbicides

Intensive cotton production has been and continues to be the cause of very serious environmental disasters, the most emblematic of which is the Aral Sea disaster, the effects of which you can see in the photo above

In just 36 years, the area has been completely desertified, but desertification is only the most obvious and perhaps least serious consequence: the soils are now totally salinized and infertile, the drinking water aquifers have been contaminated by the massive use of chemicals, and the incidence of fatal diseases among the inhabitants is 400% higher than in other polluted areas of the world

The situation in the Aral Sea is staggering, but it is only the tip of the iceberg when you consider that only 10% of the world's annual cotton production was grown in this area

In addition, cotton is often blended with synthetic fibers, which are strong, cheap, efficient, and almost indispensable for the production of special technical textiles. The problem is that they are chemically synthesized products derived from petroleum, which, as we all know, has a huge environmental impact in both production and disposal

Despite all these factors, cotton and synthetics remain the most efficient fabrics. For this we offer classic solutions such as polyester, acrylic and microfiber, cotton blend or 100% cotton, also in fine Egyptian, Giza or Sea Island certified long-fiber qualities, woven with high-density finishes such as satin and percale

Not only environmental factors, but skin contact is also a factor that should not be underestimated. Cheap textiles are more likely to be processed and dyed with substances that are not suitable for your guests' skin and can cause skin reactions and thus negative feedback that can negate the supposed initial savings

If you want to reduce your environmental footprint and risks to your guests' skin, you can choose environmentally sustainable fabrics: the best known are organic cotton and linen and silk, but now there is a new generation on the market: cotton and synthetic fabrics made from recycled materials and yarns made from low-impact raw materials such as bamboo, hemp, nettle, soy and wood fiber

Silk	●●●○○	●●●●●	●●○○○

To give you a better idea of the options available, we have created a comparison table of the best yarns on the market

Of course, raw materials can be combined with each other and processed with different techniques to determine the characteristics that affect the quality and cost of the finished product. We will help you choose the right yarns and technical properties to meet your budget and target customers' needs

All yarns, except 100% synthetic, can be GOTS, Bio or Oeko Tex certified and can be made with the special antibacterial and fire-retardant treatments

Cotton is the king of the textile market, perfect for making all kinds of products, but with a huge footprint

You can choose from different types of processing, from the simplest and most efficient to extra luxurious, high-density processing made from fine Giza, Egyptian or Sea Island certified long-fiber cottons, more expensive and suitable for making bedding sets and towels

You can also reduce your environmental impact by opting for recycled cotton, which is becoming increasingly popular and trendy. GOTS-certified organic cotton is another eco friendly alternative, but only about 7% of the world's cotton is certified organic, and the cost is 30-50% higher

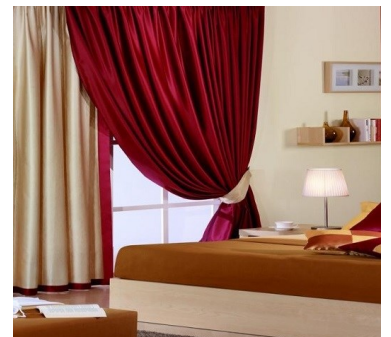

synthetic fabric

There are dozens of synthetic textile fibers on the market, from the most classic, such as polyester and microfiber, to those designed for specific uses with special technical characteristics

They are potentially suitable for making any product, but because of breathability issues, we recommend them for products that are not in constant contact with the skin

To lessen the environmental burden, you can choose recycled plastic yarns, also Blue Ocean certified, made from plastic waste collected at sea that you can promote with EcoHero and Realimpact

Linen, is very versatile and can be used to make all kinds of products so much so that it was once used both to dress Egyptian emperors and to make the sails of their ships

The environmental impact of linen is 50% less than that of cotton, but it still requires annual tillage, irrigation, fertilizer and chemicals. In addition, the seeds are widely used in cooking and cosmetics. The impact is further halved if the linen is certified organic, but considering that only 10% of the world's flax is certified organic and thus the cost may be double the standard

In the intro catalog you can find out all the reasons why bamboo is eco-revolutionary. In summary, it has a positive impact on the environment and, after cutting, regenerates at a record rate of 94 cm per day without tillage, irrigation or pesticides

Bamboo is very versatile durable, velvety to the touch, breathable and absorbent, especially suitable for delicate skin due to its outstanding hypoallergenic, antibacterial and antifungal properties

More than just a weed, nettle can be used to produce excellent quality yarns that are heat-regulating, breathable, hypoallergenic, and have minimal environmental impact

Nettle regenerates spontaneously after cutting and requires no tillage, irrigation, pesticides or herbicides: similar to bamboo on a smaller scale, but with the advantage of being abundant in all latitudes

Hemp was the most widely used raw material in textiles and was used to make a wide range of products, from ropes for ships to robes worn by Arab diplomats. With its recent rediscovery, new processing techniques have been defined to create fabrics that are increasingly soft and velvety to the touch, durable, super absorbent, breathable, draining, and with exceptional antibacterial properties

The plants can reach 5 meters in height in a single season, providing abundant raw material, grows at any latitude and is easy to grow: it requires no tillage, irrigation, herbicides or pesticides. It is also good for resting rotational soils because it nourishes the soil, cleaning it of chemicals and heavy metals

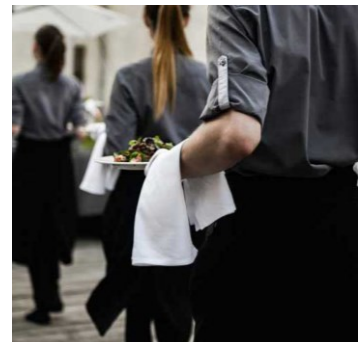

Tencel is not a raw material, but a textile manufacturing process that uses agricultural waste such as orange peels and seaweed. Starting this year, it is also available in the innovative ReFibra version, made from 1/3 recycled cotton

All Tencel fabrics are soft, breathable, skin-friendly and comfortable to wear

Feels so right

In addition to being a valuable source of plant protein, soy is the perfect raw material for producing fabrics so soft and pleasant to the touch that they are also called "vegetable cashmere"

Soybean cultivation has a high environmental impact compared to other green alternatives, as it requires soil tillage, fertilizers and pesticides. On the other hand, the environmental impact of the fabrics is very low, as they are made from the waste of beans used in the food industry, which used to be incinerated and now, thanks to new processing techniques, are used to make strong, silky fabrics with natural properties that make them breathable, antibacterial and UV-resistant

Wood fiber is an innovative and high-quality solution: smooth and soft like silk, more absorbent and durable than cotton, breathable like linen

Made from wood scraps processed using a method patented in Italy

AUTENTICA
FIBRA DI LEGNO

Natural silk is ancient and precious, we all know its "silkeness" but few know that it has exceptional hypoallergenic properties and a very low environmental impact

However, the cost is 30-50% higher than other luxury alternatives such as organic cotton percale

Given the prohibitive cost and the extreme care that must be taken during washing, we recommend silk only to facilities that want to make their guests feel like royalty

Antibacterial treatments

Surveys reveal that consumers also choose facilities based on environmental sustainability and safety criteria, so after introducing you to eco-friendly fabrics, we couldn't forget about antibacterial solutions

There are many alternatives on the market, we propose two technologies patented in Italy, based on treatments with copper or silver nanoparticles

Applicable on all types of yarns and can be promoted with SafeZone

SAFEZONE

MadeInItaly

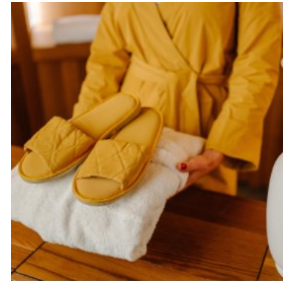

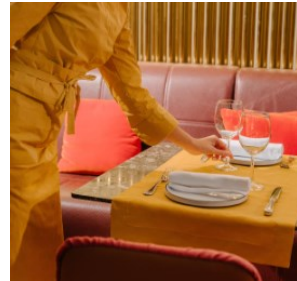

Nokvit

Copper is an antibacterial and antiviral mineral used since ancient times for its extraordinary sanitizing qualities

Nokvit fabrics® Are additivated with copper nanoparticles, 100% chemical-free, dermatologically tested, breathable, hypoallergenic and mite-free

They reported record results in tests deactivating 99% of viruses and 100% of bacteria with guaranteed effectiveness for more than 100 washes. ISO 18184:2019 and ISO 20743:2013 certified

SilverCare

Additivated with silver nanoparticles that not only eliminate 99% of viruses and bacteria but also have hypoallergenic, anti-static, detoxifying and anti-inflammatory qualities

Natural Fire-retardant Treatment

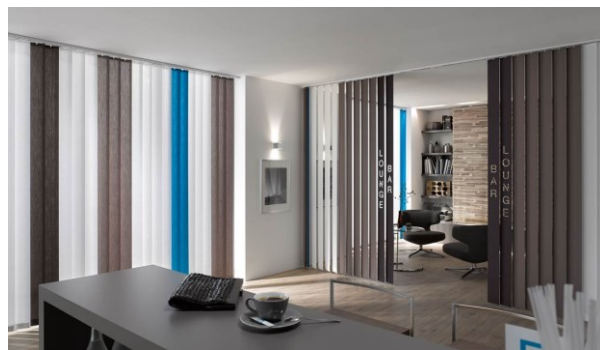

A true revolution in the field EcoSafe treatment is the only solution in the world that enables all natural fabrics to meet major international fire-retardant standards without the use of chemicals

Patented in Italy, 100% natural, can be applied to all types of fabrics and allows the original yarn certifications such as GOTS or OekoTex to be maintained

With EcoSafe you can make all kinds of textile products that usually need to be fire-retardant in a facility: upholstery, mattresses, pillows, curtains and carpeting

Considering the efficiency and sustainability of treatment to increase the safety of their facility, decrease fire risk and insurance costs, some partners have decided to expand the range of fire-retardant products to include those not explicitly required by regulations, such as towels, tablecloths and uniforms

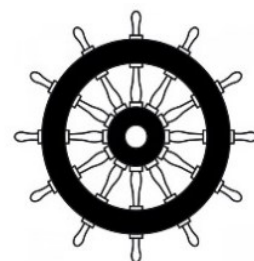

EcoSafe-treated yarns have a record fire-retardant index, higher than that of synthetic competitors, and can easily pass the tests required by all international standards, even the most stringent

That is why EcoSafe is now widely used not only in the hospitality industry, but also in passenger transport, military use and even to make Formula 1 drivers' clothing

Performance remains unchanged throughout the product life cycle, with no need for periodic renewals. At the end of the cycle you can return the products and receive a discount on the replacement, as they are recycled to produce new products with the same level of fire-retardant

Easier to wash, you can use additives normally not compatible with fire-retardant fabrics

Promoted with SafeZone and EcoHero

EcoHero

SAFEZONE

Not only fabrics, EcoSafe can be used on all natural materials including wood

With H+Contractor you can make furniture, accessories, parquet and decorative, insulating or construction panels that meet international fire-retardant standards without chemical treatments and with zero formaldehyde emissions

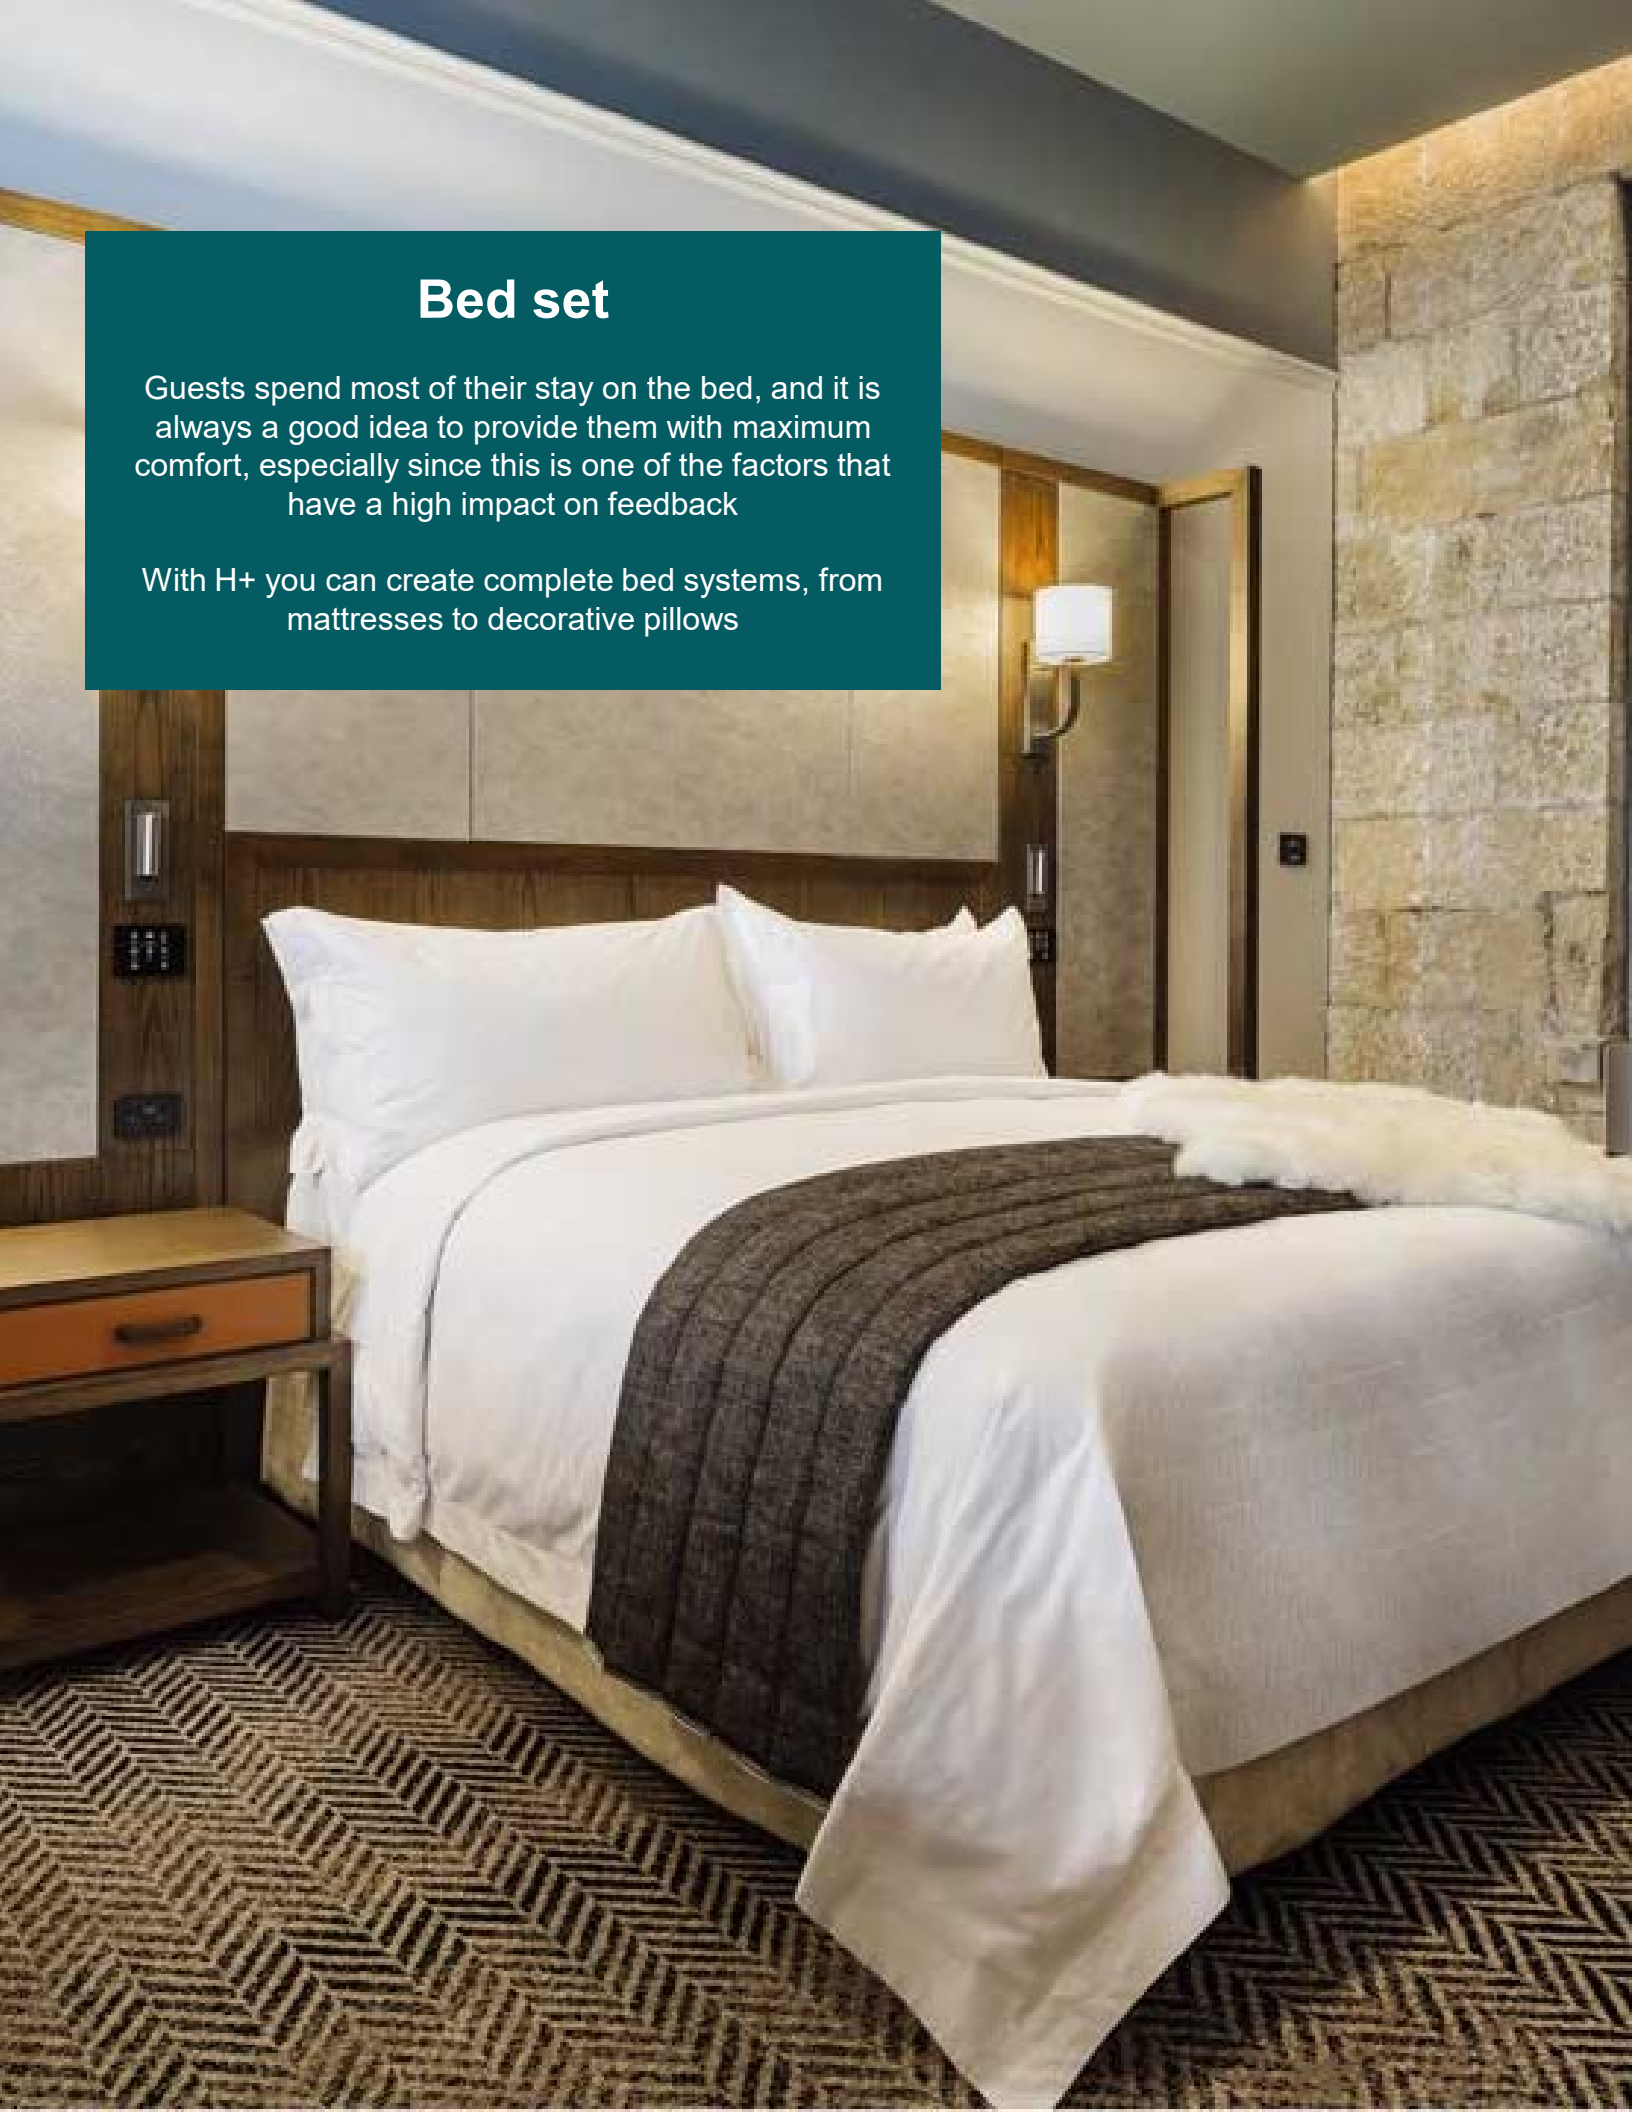

You can choose innovative and environmentally friendly materials that can be promoted with EcoHero and are perfect if you aspire to obtain environmental certifications for your facility such as Leed or Ecolabel

Bed set

Guests spend most of their stay on the bed, and it is always a good idea to provide them with maximum comfort, especially since this is one of the factors that have a high impact on feedback

With H+ you can create complete bed systems, from mattresses to decorative pillows

White bedding sets remain a must; they give guests a clean feeling and are also the easiest to manage

If you want to stand out, you can personalize them with your logo and choose designs with textures and decorations in line with your image, perhaps embracing the new trends that propose colorful sheets even in accommodations

Design is important, but skin contact and breathability have a significant impact on the quality of your guests' sleep

With H+ you can choose any type of solution, but consider that a cotton blend may be a super cheap solution, but it can never be as comfortable and breathable as an Egyptian cotton fabric with percale or satin finish, and these in turn have nothing to do with wood fiber or pure natural silk, the ultimate in comfort when it comes to touch sensations

Low-cost products are often synonymous with dubious quality: they quickly become rough, have a short life cycle, and may be produced with chemical treatments that can cause skin irritation to your guests, thus negative feedback that negates all the supposed savings

For an efficient bedding set, we suggest an OekoTex-certified cotton blend, but if you want more, you can choose cotton, preferably long-fiber cotton such as Egyptian

You can also choose eco-friendly yarns such as bamboo, soy, hemp, nettle and tencell. And if luxury is a must you can make beautiful sets from wood fiber or pure natural silk. Of course, all yarns are available with the special antibacterial and EcoSafe treatments

Rooms are usually kept at a pleasant temperature, so blankets, comforters, and quilts are simply a matter of design: you can choose from decorative exposed patterns or solutions that can be hidden under bedspreads or in comforter covers

Whatever your philosophy, you can choose from a wide range of models: hypoallergenic, mite-proof, light, medium and winter, all certified fire-retardant, made of polyester or in eco friendly raw materials with natural fire-retardant treatment

To add an extra touch to your beds, you can also make decorative runners and pillows

If luxury is a must,
HiDesign solutions
made by Top Brands
such as Frette,
Versace, Martina
Vidal and Cavalli

Mattresses

The mattress is the heart of the bed system, and the choice is based solely on technical characteristics

With H+ you can choose from numerous models, Made in Italy or imported solutions, from the most efficient to the latest generation with multi-layer combinations of different materials to ensure a perfect sleep

The covers are all mite-proof, hypoallergenic, removable and machine washable. They are in addition available with antibacterial treatment and in eco-friendly yarns such as bamboo or soy, certified by GOTS or ICEA

All solutions are CE-certified and comply with the main international fire-retardant regulations for the hotel, ship and railway sectors

ZeroPressure

There is no perfect mattress, but Zero Pressure is the one that comes closest to it

100% Made in Italy, designed in collaboration with the University of Florence to promote the natural stretching of the body during rest: by lengthening the spine, it promotes the release of muscle tension and contractions, relieving neck and back pain and improving blood circulation to ensure the best possible rest

Certified by the American Chiropractic Association and so effective that it was used by the Italian national soccer team in its official training camp at Coverciano

Available in different sizes and with washable outer coverings made of OekoTex and GOTS-certified cotton and soy blends

UNIVERSITÀ
DEGLI STUDI
FIRENZE

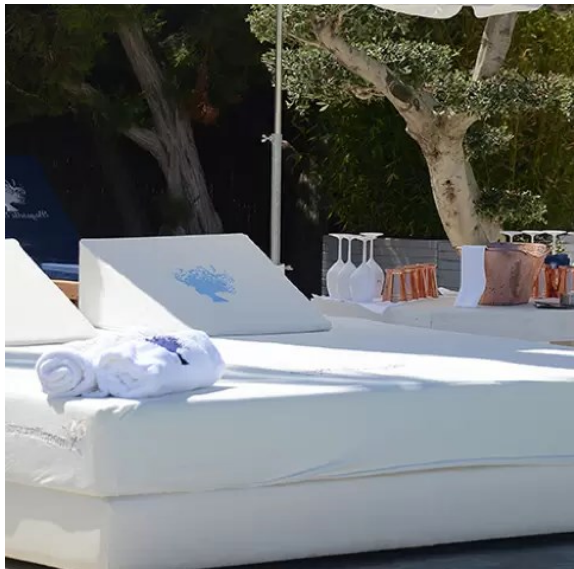

ENDORSED BY

CHIROPRACTIC
ASSOCIATION

MadeInItaly

Zero pressure is also perfect for creating customized outdoor solutions thanks to waterproof covers

With H+SuMisura you can choose from numerous alternatives, but if you want to ensure a unique experience for your guests, you can offer the Hogo bed system, chosen by numerous VIPs and super athletes such as Cristiano Ronaldo and Real Madrid soccer players

Bed frames and mattresses made from natural raw materials and innovative technologies that improve sleep quality to such an extent that in 2 months they can help the body reduce its biological age by up to 15 years

The main feature of Hogo beds is the special magnetotherapy technology that polarizes the body by following the earth's natural magnetism, protecting against radiation and promoting quality sleep

If you choose other mattress models, you can achieve similar effects with the special magnetotherapy and antibacterial toppers made with a technology patented in Italy

You can also choose alternative, hypoallergenic, antibacterial and eco-friendly toppers, all of which are of course approved for accommodations

To protect mattresses, pillows, and comforters, you can choose ComVir covers, an innovative material patented in Italy that is antibacterial, anti-mite, and naturally fire-retardant

In the Room catalog you can discover fantastic SmartBed systems with integrated multimedia system - 4k projector, Dolby Surround Bluetooth speakers - meshLed lights and sleep monitoring system

With H+Contractor you can make fantastic furniture and accessories integrated with the latest smart innovations, even made of innovative antibacterial or eco-friendly materials such as bamboo or recycled wood

All available with EcoSafe fire-retardant treatment

You can also choose solutions made by non-profit organizations in the Realimpact network

Pillows

Another industry trend is to allow a choice between different pillows at the time of booking or at check in. This service certainly increases and complicates the work of the staff, but it allows you to improve the sleep and mood of your clients in feedback optics

With H+SuMisura we will help you choose the perfect cushions for your facility choosing between several models, all CE approved and fire-retardant

MemoKing

If your goal is to ensure maximum comfort, MemoKing pillows are the solution you are looking for

Made of Memoform®, an Italian-patented material designed to provide maximum neck and shoulder support, perfect breathability, optimal moisture and heat dissipation, thanks in part to special ventilation holes in the center of the pillow

Removable cover made of Outlast®, an innovative fabric patented in Germany and developed in collaboration with Nasa to ensure maximum breathability even in space: antibacterial, Oeko-Tex certified, hypoallergenic and mite-resistant

100% Made in Italy, patented, CE, 1IM and IMO certify, approved and as class I medical devices, OekoTex certified

OEKO-TEX®

IL SOFFICE

IL BILANCIATO

IL SOSTENUTO

You can choose from numerous alternatives, most efficient in polyester, eco-sustainable models with GOTS cotton, soy or bamboo upholstery, and even top-of-the-line models with patented technologies such as the X-Bio models and the 3-option collection developed only for hospitality need

Towels

Soft, bulky, absorbent towels are a business card that can make all the difference, but finding models that will last and reduce the frequency of replacement is certainly not easy. With SafeTowels sponges you can meet all your needs because they are made special by the 3 patented treatments

4 collections Made in EU and 100% customizable

SafeTowel sponges are a concentration of technology, quality and design that sets a new benchmark for the towel market

100% Egyptian cotton 500 g/m², antibacterial, velvety to the touch and designed to maintain absorbency and color quality for up to 5 years, extending life cycle and reducing re-stock costs

This is made possible by high-quality materials and 3 innovative patented treatments:

Bio Active Silver[®] based on silver ions that provides 98% reduction in viral, bacterial and fungal load and natural decomposition of allergens, dust and pollutant gases

Ultrasoft[®] increases the strength, volume and softness of sponges, facilitates drying and lengthens the life cycle

Tio2[®] activates self-washing processes during exposure to sunlight

Patented treatments allow you to offer soft and safe towels to your guests, extend their use cycle

They also save on laundry costs: bad odors are caused by the proliferation of bacteria that love moist environments, such as wet sponges. Thanks to patented treatments, towels dry faster, prevent bacterial growth, and wash themselves, prolonging the feeling of cleanliness and freshness and reducing the frequency of guest requests for replacement

3 collections all made of 100% Egyptian cotton 500 GSM, Made in EU, OekoTex certified

Highly resistant to industrial washing at 90°C, drying and ironing

All promotable with SafeZone, Eco 30% bamboo models also with EcoHero

With H+SuMisura you can customize them, discover alternatives or create new solutions exclusively for your facility, including with GOTS or Giza certified cotton

With H+SuMisura you can customize all designs with embroidery, prints, embossing and labels

and discover alternative patterns also in cotton blend, or alternative eco yarns like Bamboo, Hemp, Tencel and Woodfiber

You will be able to design exclusive solutions for your facility, even without special treatment

Not only bath towels but also:

Beach and sunbed towels, plain, double-layered or with built-in pillows for maximum comfort. Also with storage pockets, windproof fastening systems and with the special anti-chlorine treatment

Gym towels, with closable storage pocket and strap for attachment to machines

Innovative terrycloth sheets, soft, durable and washable at 90 degrees

In the Table catalog you can also discover antibacterial bamboo-blend dish dryers

If luxury is a must, you can choose HiDesign designs made by Top Brands such as Frette, Versace, Cavalli, Martina Vidal and many more

Table

Presenting the table is not an easy task, but it is essential to give your guests an image that sets you apart from the competition. There is no single concept of a beautiful table, but rather a flood of ideas and trends that result in radically different solutions

We will help you design the ones that best suit your style, in exclusive for your facility, choosing shape, size, texture and color. You can choose from classic and efficient materials, such as polyester or cotton blend, 100% cotton, even extra luxurious, long-fiber, high-density, environmentally friendly solutions made with antibacterial, waterproof, and/or stain-resistant treatments

The classic white table is always a good idea, but you can go along with the latest trends by offering textures and colors that fit your image

The very latest trend is to present bare tables or table settings only with runners or placemats for more efficient, easier to manage tables and to reduce the cost of washing and replacing

That is why these solutions are now used in all environments, from the most informal to the most sophisticated, but of course they can only be used on tables with beautiful surfaces

If you have tables that are not very presentable, it is better to resort to classic solutions or, with H+Contractor, you can make new tables, including Eco friendly and antibacterial materials, also integrated with smart technologies such as wireless charging stations, MeshLed lighting systems, and interactive touch screens to manage orders and payments

In the Table catalog you can discover how to create placemats, napkin rings, cutlery holders, coasters, menus and many other table accessories with innovative materials and coordinated designs exclusively for your business

All solutions are 100% made in Italy and are available in both classic materials such as wood or plastic, and innovative materials such as bamboo, rattan, cork, stone, metal, and compostable plant plastic

Disposable tablecloths are no longer a solution reserved for the most spartan establishments, even luxury operators have started using them because Airlaid paper is very similar to the best cotton, but more efficient, easier to handle, and perfect for reducing restocking and laundry costs

In the ComposTable catalog you will find numerous patterns of single-color and in fantastic textures disposable tablecloths and napkins. All customizable and made of different materials, from straw paper, suitable for informal situations, to BambooAirlaid, very similar to the best cloth tablecloth, environmentally friendly and compostable

If luxury is a must HiDesign solutions from Top Brands like Frette and Martina Vidal

Versace is also offering the fantastic cutlery, glassware and ceramics used to decorate the table at the G7 Taormina in 2017

Curtains

Curtains are not only a design element, but are also essential to ensure the privacy of your guests, to provide the right amount of light at all times, and to darken the room during the rest period

It doesn't matter whether you prefer classic pleated blinds or modern panel blinds: you can create all kinds of solutions with technical features and designs create exclusively for your facility

You can choose classic pleated or more modern roller, curtain, sack or panel solutions, all available in thousands of textures, from the most classic to the most modern even with 3D effect

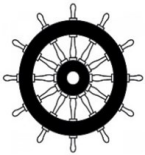

Usually curtains for accommodation facilities must be fire retardant certified

Since these are not products with prolonged skin contact, standard synthetic fire-retardant yarns can be ok

But if you want to be 100% eco-friendly, you can choose low-impact yarns made with the antibacterial and fire-retardant treatments promoted by EcoHero and SafeZone

MadeInItaly

SAFEZONE

EcoHero

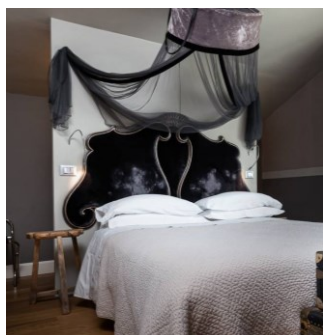

The main mission of an optimal curtain system is to ensure the privacy and good rest of your guests

With H+Contractor you can go further and choose innovative dynamic solar automation systems, perfect for regulating light during the day phases, ensuring perfect rest, regulating room temperature, preventing outside noise and even deterioration of furniture, upholstery and objects by closing off vacant rooms exposed to the sun

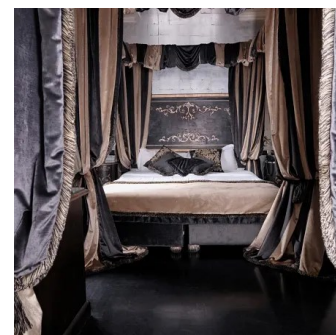

With H+Contractor you can also make outdoor tents, umbrellas and fantastic bioclimatic pergolas, perfect for providing relaxation and privacy on balconies, pools, beaches and gardens

You can also create canopy curtains to make your guests feel like royalty and mosquito nets to ensure a peaceful sleep

If mosquitoes are a real problem, in the Table catalog you can discover the innovative hormone capture system, effective within a 60-meter radius

Carpets and rugs

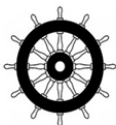

Textile coverings for the hospitality industry must be designed to enhance your space and highly resistant to footfall

You can choose from more than 5,000 textures or create solutions with designs and sizes exclusive to your facility

From more classic materials, such as polyamide, to more natural ones such as wool: merino, New Zealand, and Moroccan. You can also choose eco-friendly alternatives such as nettle, aloe, bamboo silk, tencel, linen, hemp, jute, banana fiber, cactus, combinations of different materials, and even with elements of fine silk

All 100% Made in Italy, high-walkability, designed to last and periodically renewable thanks to special treatments that make them like new again

All available with the special antibacterial and fire-retardant treatments promoted with SafeZone or EcoHero

MadeInItaly

SAFEZONE

EcoHero

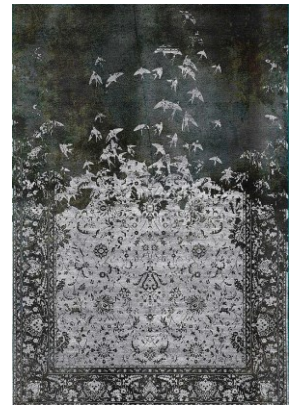

The choice between carpets and rugs is a matter of style, but it should be remembered that most international regulations require carpets to be fire retardant, while rugs generally not. In addition, carpets are easier to renew when they are worn out

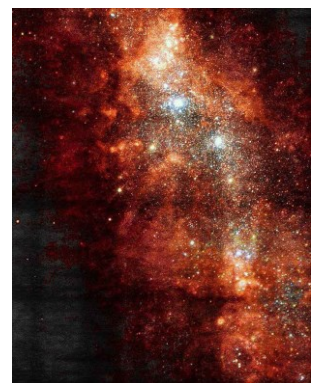

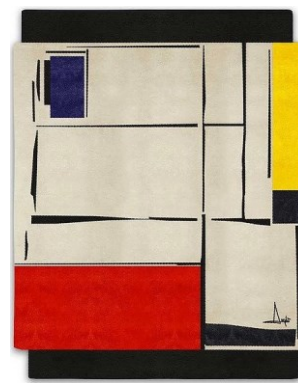

Whichever you choose, you can design your own customized models by choosing from a variety of designs

Classical styles, including antiqued

Geometric models, also with 3D textures

Modern styles also inspired by works of art or the cosmos

Or inspired by traditional Afghan, Caucasian, Chinese, and Moroccan textures

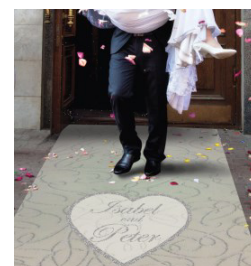

All models can be
made with
antibacterial and
EcoSafe fire-retardant
treatments

All solutions are 100% customizable
and Made in Italy

You can also make fantastic welcome
mats and solutions for events and
suitable for outdoor use

Professional clothing

Uniform design is very important because it reveals the style of your facility in seconds

This is not the only factor to consider: there are solutions with technical features and materials specifically designed for the hospitality

You can choose standard customizable models or create exclusive solutions for your facility all 100% made in Italy

MadeInItaly

You can choose from Europe's largest ready-made catalog of more than 10,000 models with solutions for all staff: reception, kitchen, bar, lounge and counter staff, spa, room cleaning, service staff, and even special uniforms for health care, maintenance and management staff

All models are customizable, and you can also create new designs exclusively

A wide selection of fabrics, from the most classic and efficient, such as polyester or cotton blend, to patented technical solutions specifically designed to improve the health and performance of your staff

Sizing is not and never will be a problem, with simple measurements and the use of the size chart provided you can choose the ones that fit and, if they are not perfect, you can change the items

We can also organize presentation events to choose together the most suitable models for your style and find the perfect sizes for your staff

DANTALONI - TROIEDE - MASC - DANTALON - DANTALONES

A man in a dark blue pilot's uniform with gold epaulettes and a woman in a red Air Italy uniform with a red hat and green gloves are standing in an airplane cabin. The woman is smiling and looking towards the camera, while the man is looking slightly away. The background shows the interior of an airplane with overhead storage bins and seats.

If luxury is a must the
HiDesign models of
the best Made in Italy
designers such as
Valentino, Armani or
Ettore Bilotta,
designer of the latest
Air Italy uniforms

Health+ech

10,000 healthier daily steps

Every day, staff travel miles to pamper guests, and their efficiency is directly proportional to their health status

Walking for miles every day is tiring and often causes uncomfortable inflammation, which over time can lead to more serious conditions such as back pain, osteoarthritis, arthritis, tendonitis, hammer toes, and varicose veins that wear down the staff and lower their performance standards

One cause is that staff often wear footwear more suited for casual walking than for professional use. But if marathon runners wear special shoes, why should your staff wear regular shoes?

You can discover the HealTech catalog, more than 50 models of footwear designed for professional use to safeguard health and improve employee performance

100% Made in Italy and CE certified

Super-light, ergonomic outsole with energy-absorbing system for smooth and comfortable walking. With RSC technology, anti-slip, anti-oil, anti-acid and anti-static

Water-repellent and breathable for feet that are always dry and blister-free. Models with reinforced toe box available

CE **MadeInItaly**

All models are available with special Memory Foam insoles that improve shock absorption, breathability and have an antibacterial effect to eliminate odors

Memory Foam

Massima protezione delle articolazioni
Maximum joint protection

Recupero
Recovery

Assorbimento
Shock absorption

Memoria
Memory

Schiuma ad alta densità
High density foam

Tessuto 100% traspirante
100% breathable fabric

Elastic lumbar support can be another good solution to preserve the health of staff

You can choose bands designed for professional use, available in 12 sizes with circumferences from 65 to 110 cm

As a world exclusive, you can also choose special clogs developed in synergy with Inescop, a world leader in technical footwear research

Ultralight due to the special SRC sole with patented Xcel Ultralight technology, made of carbon and glass fiber, anti-static, anti-slip and anti-tracking

Carbon fiber toe cap certified to withstand pressure up to 200j (1500kg) and cushioned insole for improved walking ergonomics, removable and washable

Available in different models and colors, all CE certified and 100% Made in Italy
