Tool Control

Ensuring Safety and Efficiency in Engineering

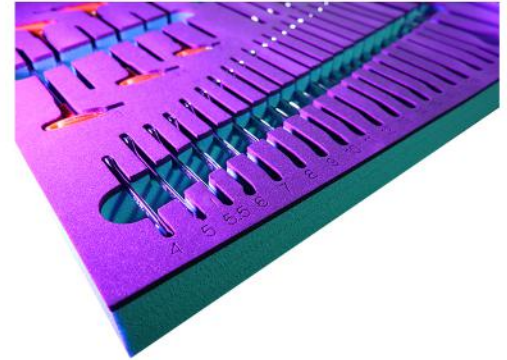

Tool control is crucial for ensuring safety.

Neglecting to properly manage tools can lead to serious safety risks.

For instance, leaving a tool inside an aircraft or engine can cause damage, delays, and even fatal accidents. Therefore, it is imperative for companies to establish and enforce tool control solutions and procedures. Such programs can provide a variety of benefits, with safety being the most important one. By implementing effective tool control measures, companies can significantly reduce the likelihood of accidents and ensure that all tools are accounted for and stored in a safe manner.

- Foam Inserts

Effective organisation and storage using shadow foam is essential to ensure that tools are kept in excellent condition. It also keeps tooling adequately maintained and easily accessible to workers. properly maintained, and readily accessible to workers.

- Custom Kitting

Here at Tool Raptors, we pride ourselves on presenting custom solutions to meet the individual needs of all our clients. Whether you require a mobile, static or transportable kit. We have the expertise and knowledge to create the perfect solution for you. We work with a variety of high quality case manufacturers, such as, Peli, Max and Explorer, as well as designing our own custom flight cases.

- Laser Etching

Laser etching tools and foam is an essential part of the modern manufacturing process. It allows for precise marking and identification of assets on a wide range of materials. Laser etching tools is the go-to choice for businesses looking to improve their asset control and organisation.

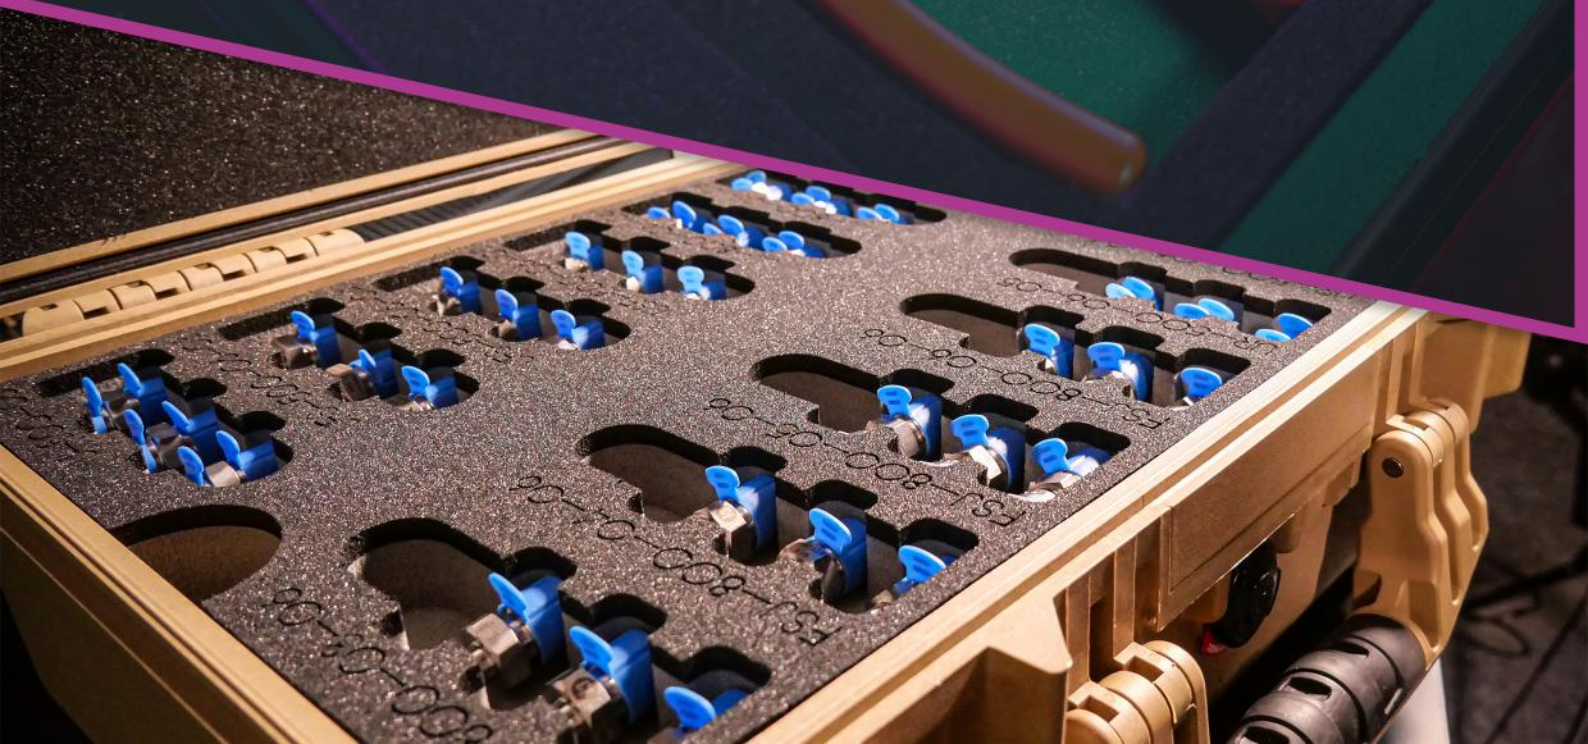

Tool Control

Foam Inserts

Our custom foam solutions are designed to help provide a safe, secure storage system for all your assets and equipment. As we have a huge supply of high-quality foam material, we can cut each foam insert to fit your specific needs. Using shadow boards you can be confident that every tool will be accounted for and stored in its proper location.

In addition to safety benefits, having foam can also vastly improve the efficiency of your workplace. Having disorganised tooling means workers are spending more time to find and retrieve any missing assets. Having foam boards means you have tools stored in designated locations, making them easier and faster to find.

At Tool Raptors Ltd, we offer a wide range of shadow board solutions to tailor to your specific needs. Our experienced designers will work with you to create custom foam inserts that fit your tools and equipment perfectly.

Tool Control

Custom Kitting

Designing your own kit could not be easier...

1. Choose your case or cabinet.

automify

Smart-Access Systems

- Asset Tracking

Smart-Access offers a flexible and automated approach to tool control, supporting various methods of asset and tool tracking, including RFID, Proximity, Magnetic, Weight and barcode systems.

By utilising best-in-class radio-frequency identification (RFID) technology, physical assets, such as tools, can be tracked in real-time.

Additionally, advanced geospatial algorithms can be utilised to correlate and track assets as they move throughout a building.

- Asset Management

Smart-RFID offers a suite of comprehensive features to help manage your assets.

Features, including calibration tracking, reporting asset damage, and usage reports, are included as standard.

- Reports & Analytics

Get the most out of your data by generating reports and working with actionable insights.

Our reporting engine enables comprehensive reports to be designed and generated.

Data insights about assets are highly valuable for a business. Automify makes these insights accessible. Our reporting engine enables highly personalised reports to be designed and used. Reports can be generated ad-hoc or on a schedule and automatically emailed to key personnel.

Smart-Access

Autobox

- Product Modes

- Access control only
- Access control with manual tool tracking
- Access control with sensor-based tracking
- Access control with RFID tool tracking

- Access Control

- Toolboxes can be unlocked by presenting an authorised keycard
- Supports existing employee keycards
- Grant access per user, group, job etc
- Alerts unauthorised access attempts
- Produce report of toolbox access attempts
- Key card reader supports any standard MIFARE key card

- Manual Tracking

- Technician checks out tools manually under keycard
- Cost effective method for low risk areas
- Basic usage, damage and calibration tracking

- Sensor Tracking

- Tools tracked via optical sensors
- Live feed of tools in active use
- Check out tools via technicians and job numbers
- Tools do not require tagging
- Instant feedback when tools lifted from foam
- Suitable for medium to high risk work areas

Smart-Access

Autobox - Continued

- RFID Tracking

- Tools tracked via RFID tags
- Live feed of tools in active use
- Check out tools via technicians and job numbers
- Tools require tagging
- Suitable for high risk work areas

- Power Options

- Mains plug in
- Battery powered [up to 3 batteries] [Powered by Milwaukee]
- Up to 36 hours battery life [Each battery offers 12 hours battery life]

- Hardware Options

- Screen Sizes: 10' 15' and 17'
- Choice of worktop, oak, stainless steel, brushed aluminium and rugged black

Smart-Access

Automify - Your New Tooling System

- Dashboard

Insightful data is accessed and displayed immediately. Automify can help boost productivity, improve safety, and ensure adherence to the ever-increasing regulatory requirements by integrating real-world data gathered from your toolboxes, rooms, cases, and other storage solutions.

- 24/7 Support

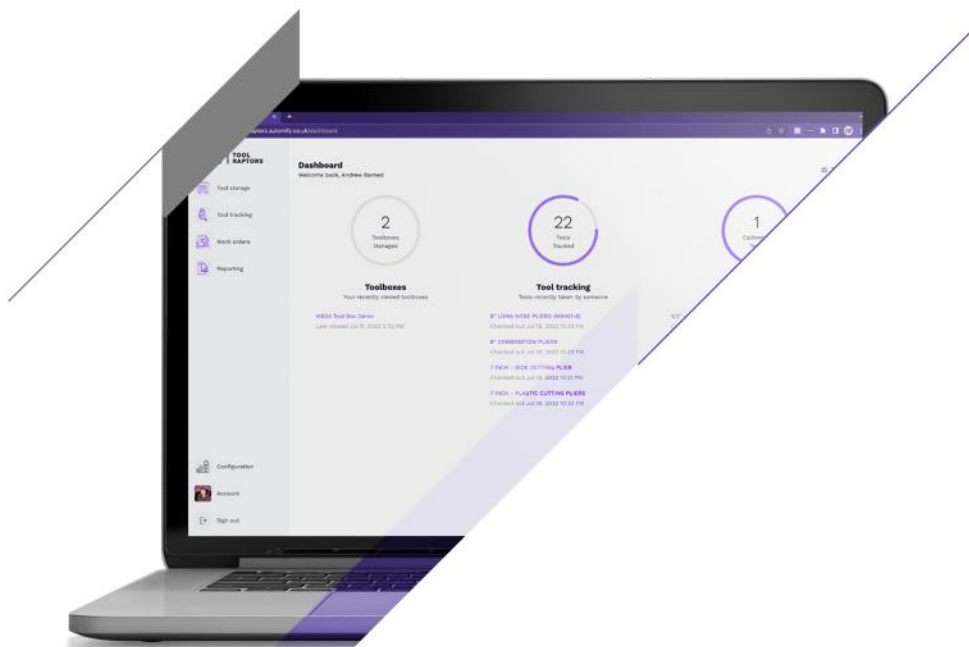

Our software offers constant access to support for hardware, software, tooling, AOG services, purchasing, hiring and general support. You can rely on Tool Raptors for quick and useful responses to all your enquiries.

- Reports

Stay on top of your tooling and who's using it with custom generated reports. Easily view, download and send reports for a multitude of data over set periods of time. These can include but not limited to, usage, loss, calibration, breakage, unserviceable and spend reports.

- Aircraft Tooling Assignment & Tracking

Assign aircraft to locations, facilities and bays. When engineers/staff members withdraw tooling from one of your tool storage solutions they have to assign the aircraft they're working on. This can also be used for guests and when tooling is out of stores for calibration, repair or replacement.

Smart-Access

Automify - Continued

- Log Lost & Broken Tooling

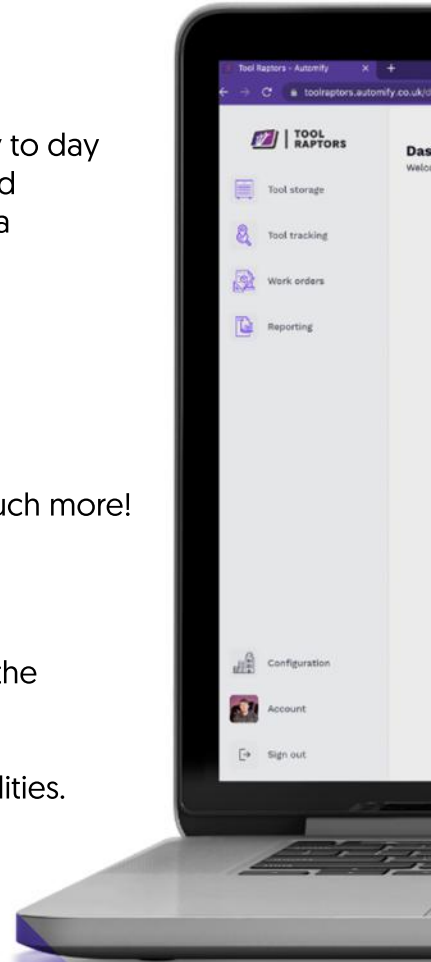

This is critical for any organisation that relies on their tools to carry out its day to day operations. Keeping track of these discrepancies, keeps everything organised and on schedule. Once the system is in place your company can use the data to make more informed decisions about its tooling inventory.

- Custom Generated Alerts

Receive email and text alerts for a wide array of moments. These can include attempted unauthorised access, unauthorised tooling use, calibration alerts, loss alerts, breakage alerts, unreturned assets alerts, and much more!

- Engineer and Tools Onboarding

During our project we include the onboarding of all tooling and assets onto the Automify software completely free of charge. We also onboard all required engineers and staff members ensuring that they can use the system fluidly/efficiently whilst using 100% of its' capabilities.
