

Protect your investment

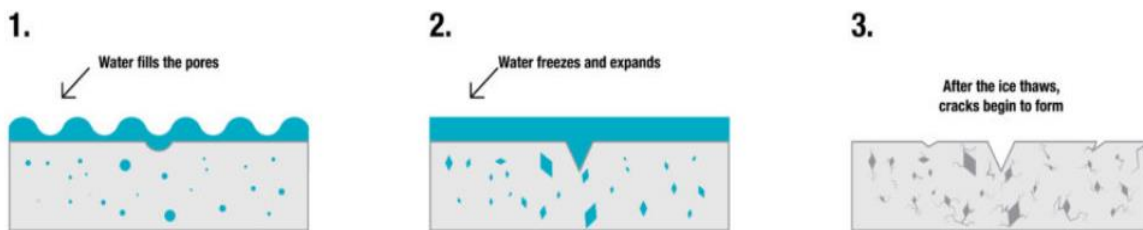

Here at Pool stop we offer various types of Stone sealing such as stone coping, water features, decks and patios.

During the build is the ideal time to have these items sealed and protected. This provides protection against

- **Erosion**
- **Freeze Damage**
- **Mitigation of Calcium**
- **Wear and tear**

Left untreated, water enters through small cracks and crevasses which may freeze and expand- which over time may cause damage.

Freeze Thaw

The added benefit this provides is improving the overall appearance and protects the stone against the elements thus reducing the risk of expensive repairs later on.

We offer a special discounted rate to Pool Stop Customers if done prior to Plaster. Sealing your stone before your pool is filled with water makes installation less labor intensive, and we reduce your cost accordingly.

We will answer any questions you may have relating the sealing process and provide you a quote within 48 hours.
