

Utopic

Utopic

A sustainable future is a utopia which is achievable
with the commitment of all of us.

Utopic is the clothing brand that has chosen to do its part.
Change starts from our mind and then becomes
real with daily individual choices.

What will your choice be?

Utopic recycled

Why 100% recycled?

Choosing recycled materials is essential to reduce our impact on the environment and is one of the most effective solutions to address the growing amount of waste globally.

Utopic items in the Recycled section are made from 100% recycled materials. By mixing recycled cotton with recycled polyester, we wanted to create a fabric that combines the best performance properties of both fibers: cotton is a highly breathable material, while polyester is a durable and resistant fiber¹. In this way, we were able to ensure, through the use of recycled materials, the reduction of our environmental impact² and, through the blend of fibers, durable and high-quality materials.

¹ <https://www.fibre2fashion.com/industry-article/5001/cotton-or-poly-cotton-fabric>.

² in the production phase, compared to a product made with virgin materials, based on our carbon footprint.

We use **100% renewable energy** for the production of Utopic garments.

Global Recycled Standard (GRS)

The Global Recycled Standard (GRS) certification is a recognition of excellence in the field of sustainability and responsible resource management. By guaranteeing a transparent production process that complies with stringent environmental standards, the GRS certifies that the materials used in a product are obtained from recycled sources, thus reducing the negative impact on the environment.

The garments in the Utopic recycled collection (zip-up hoodie, hoodie with kangaroo pocket, crew-neck sweatshirt, polo shirt, t-shirt) are all GRS certified.

The benefits of recycled fibres

1. Gas reduction and greenhouse effect

Recycled fibres use widely reduces greenhouse effect gas emissions compared to conventional fibres

2. Less water and resources consum

Recycled fibres production requires less water compared to virgin cotton cultivation.

3. Reduced use of pesticides and chemicals

Using recycled materials reduces strongly pesticides and harmful chemical substances addiction.

4. Energy saving and waste

he materials recycle process asks for less energy compared to the production of new fibers.

The calculation of the product carbon footprint as element of seriousness and transparence

The garments of the 'Utopic recycled' line were subjected to Product Carbon Footprint analysis of t-shirts, polos and sweatshirts realised in 100% regenerated tissue.

The Product Carbon Footprint represents the greenhouse gas emissions quantities produced during the product's cycle of life. By the definition it cannot be perfect, but it remains a key element to value the production environmental impact.

On every clothe "Utopic Recycled" are written the sustainability information of the item.

Recycled cotton

Recycled cotton can be generally defined as converting cotton fabric into cotton fiber that can be reused in textile products.

The majority of recycled cotton is produced through mechanical recycling: fabrics and materials are sorted and classified; after sorting, the fabrics pass through a machine that tears the fabric into threads and subsequently transforms them into raw fiber¹.

In 2021, the market share of recycled cotton represented only 1% of total cotton production²; by choosing to use it, we want to promote its expansion in the market.

Reduction of the potential impact index of recycled cotton compared to the virgin equivalent⁴

Resources depletion
(fossil fuels)

-23,82%

Chemistry

 **-64%**

For the production of each of our Utopic items, we saved 64% of CO2 emissions³

Recycled polyester

Polyester (PET) is the most widely used fiber in the apparel industry, accounting for approximately 52% of the total volume of fibers produced globally. Currently, only 14% of this is made from recycled content, even if recycled polyester has a significantly lower carbon footprint than its conventional counterpart.

To keep the industry on track toward its climate targets, Textile Exchange has launched the “2025 Recycled Polyester Challenge”, which has a long-term vision of bringing the percentage of recycled polyester up to 90% by 2030⁵.

Utopic recycled

100% recycled fabric

Knitted fabric is made up into a t-shirt

The yarn is then knitted into fabric

The blended fibres are then spun into yarn

Recycled cotton and recycled polyester fibres are mixed together

Used plastic bottles are shredded into small pieces, melted down and made into a recycled polyester yarn

Used cotton textiles are sorted based on type and colour and cleaned; then re-spun into a new fibre

Utopic recycled

All Utopic recycled items are **Global Recycled Standard (GRS)** certified.

100% recycled fabric
Composition: 60% recycled cotton and 40% recycled polyester.
Grammage: 280 g/m².

* in the production phase, compared to a product made from virgin materials, based on our carbon footprint

We use **100% renewable energy** for the production of Utopic garments.

Regenerated hoodie

Utopic organic

Organic cotton

Organic cotton is obtained from a type of cultivation that does not involve the use of artificial fertilizers and chemical pesticides. Organic farming systems have the potential to sustain and promote the health of soils, ecosystems, and people by relying on ecological processes, biodiversity, and cycles that are adapted to local conditions, rather than using external inputs that could have adverse effects on the environment and on people¹.

The fabric, therefore, has the same quality as conventional cotton but the impact on the environment is much lower².

Reduction of the potential impact index of organic cotton compared to the virgin equivalent²

-13,64% Global warming	-46,45% Eutrophication
-8,83% Resources depletion (fossil fuels)	-87,96% Water scarcity
-23,82% Chemistry	

¹ https://textileexchange.org/app/uploads/2022/10/Textile-Exchange_OCMR_2022.pdf.

² Scores of the potential impact on global warming, eutrophication, water scarcity, resource depletion and chemistry based on Higg MSI 3.3 data on Higg.org. These are general and average data, which have no direct link with the production process of Utopic articles.

Global Organic Textile Standard (GOTS)

The Global Organic Textile Standard (GOTS) certification is an internationally recognised standard for the sustainable production of textiles made from natural organic fibres. GOTS guarantees the entire production process, respecting strict environmental and social criteria. To obtain certification, at least 70 per cent of the fibres must be organic, and toxic or hazardous chemicals are banned.

GOTS promotes fair working conditions, protects the health of workers and reduces the environmental impact by ensuring transparency and traceability throughout the supply chain.

Customization

Customization prices refer to the cost of printing only, one printing passage, one colour with the technique and or the required quantities, excluding fixed cost of film and eventual additional optional packaging costs. Prices exclude VAT.

For 2 or 3 colours printing on Non Woven ,PP , PL it will be necessary to verify the logo ,in order to check the suitability of printing on that specific material: the colours of the logo cannot be added one on the other or in touch each other. For some items, in particular dark-colored textiles and polyester- depending on the logo and for a successful printing - you may need a background in order to avoid color sublimation. In this case there will be price increase. The photos, codes, descriptions, colours and prices in this catalogue should be considered purely indicative.
