Stainless Steel

Easy Communication

Safety

IP65 Classification

Customization Possibilities

The Move Stainless Steel AGV is a robust, high-performance automated guided vehicle designed for harsh environments. Engineered with durability in mind, its stainless steel construction ensures resistance to corrosion, making it ideal for industries such as food processing or pharmaceuticals.

The AGV features an IP65 classification, providing excellent protection against dust and water, ensuring reliable operation in wet, humid, and challenging environments.

Performance Data

50 mm	600 kg	1,6 m/s
Max. Lifting Height	Max. Lifting Weight	Max. Speed

Dimensions

1.500 x 900 x 150 mm (L x W x H)

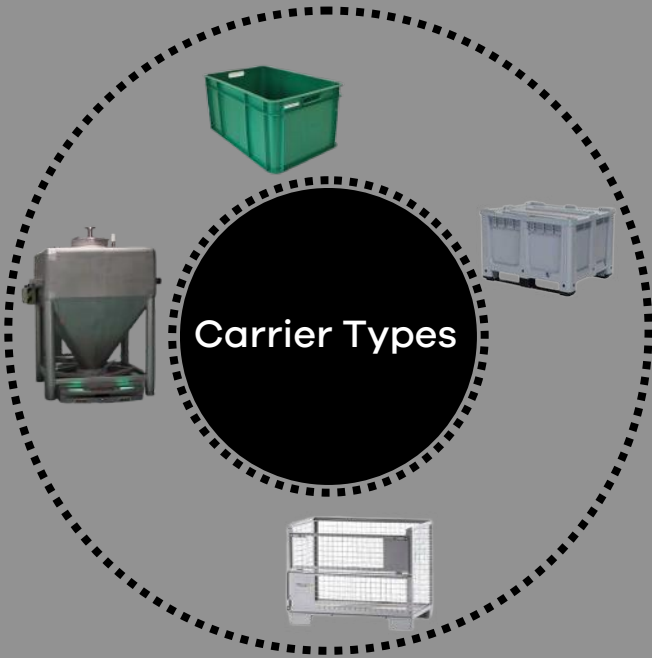

Specifications

Natural Navigation - Bottom	Stainless Steel 316
Navigation Method	Material
Closed Lift System	IP65
Lift System	Classification
Lithium-Ion	CE Standard
Battery	Certification

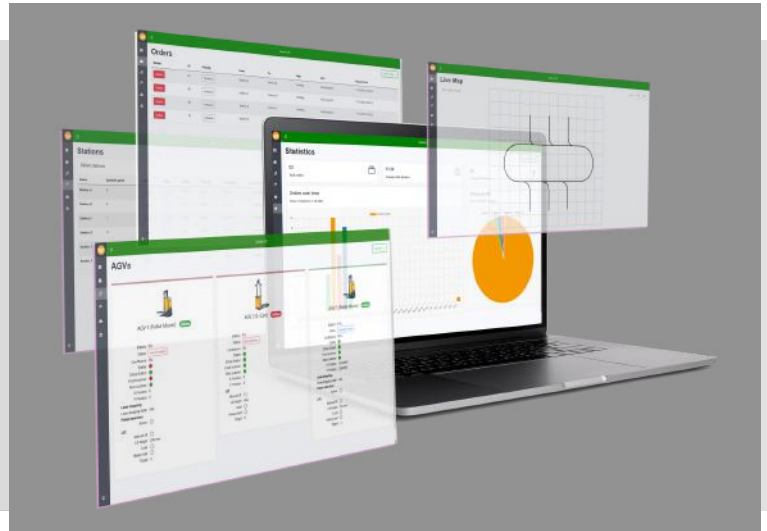

Specification

Details

-  Boxes Plastic / wood / metal
-  Pallet Cages
-  Dimensions Max According to requirement
-  Exeptions Carriers with closed bottom
-  Other types of carriers - inquiry to supplier
-  NB: The vehicle is not limited by plastic wrap on the pallet's foot

Fleetmanagement & WMS Application

The Fleet Management Software & MES provides all the essential tools to efficiently manage warehouse and production environments. It seamlessly controls multiple AGVs within the same space, optimizing workflow and minimizing disruption.

Task Management

Assign, monitor, and prioritize tasks effortlessly.

Alarm & Traffic Management

Prevent bottlenecks and ensure smooth operation.

Deadlock Prevention

Optimize vehicle paths for continuous flow.

System Integration

Connects seamlessly with MES, ERP, and other enterprise systems.

Comprehensive Product Tracking

Monitors product positions and data in real time.

Seamless Integration

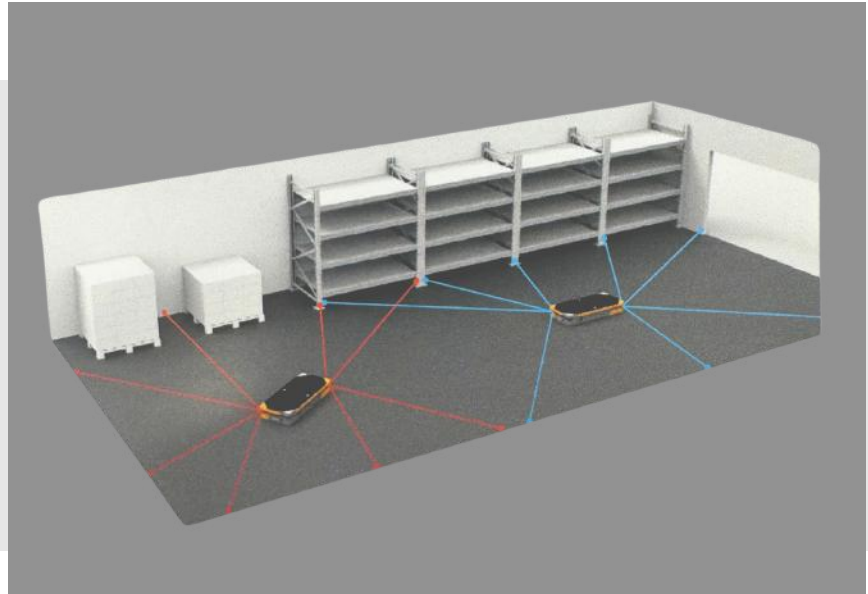

Connects with production lines, machines, and delivery stations.

User Role Management

Ensures secure and efficient system access based on defined permissions.

Navigation Method

The Move Stainless Steel utilizes natural navigation through safety scanners positioned at ground level. By referencing structures and contours in the environment, it determines its location without the need for complex infrastructure such as inductive wires, magnets, or reflectors. Simple reflectors can be incorporated where needed, providing flexibility in setup.

This method ensures efficient operation without the need for extensive setup or constant adjustments.

Key Advantages

No Infrastructure Needed

Reduces installation costs and complexity by relying on environmental features for navigation

Flexibility

Simple reflectors can be added where necessary, allowing for easy adaptation.

Enhanced Visibility

The scanners can see through under carts etc.

Safety & Scanners

Safety Scanners

Navigation Scanner

The AGVs are equipped with advanced safety systems designed to protect employees, infrastructure, and the robots themselves.

They comply with international standards such as **ISO 3691-4** and **EN1525**.

Energy Management

The AGVs feature automatic charging, eliminating the need for manual intervention. When the battery reaches a minimum level, the AGV completes its current task and automatically navigates to an available charging station.

With this intelligent charging system, the AGVs remain operational with minimal interruptions, ensuring maximum efficiency in warehouse and production environments.

Key Advantages

Seamless Integration

AGVs recharge without disrupting operations.

Automated Docking

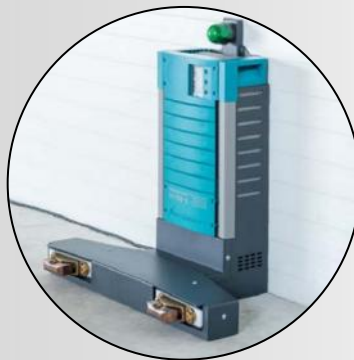

The integrated power collector ensures precise contact with the charging station.

Programmable Charging Levels

Adjust battery thresholds to optimize uptime and efficiency.

Minimal Downtime

Once charged, the AGV automatically resumes its next task.
