

ULTRADYNE
AMERICAN INGENUITY

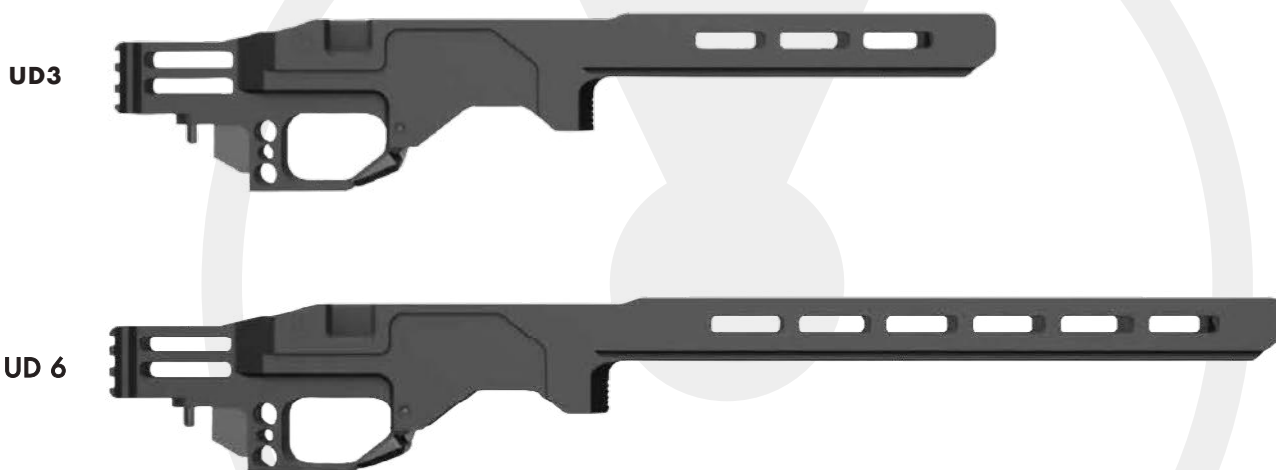

LIVING CATALOG

SUPREME MODULARITY

COMPETITION FEATURES IN A LIGHTWEIGHT CHASSIS

All the performance of the UD Chassis, now with a Picatinny rear mount for instant-detach stocks and next-level ergonomics. The UD Picatinny Chassis refines the proven platform of the UD Chassis into a more practical, more adaptable option for the modern rifle owner. We replaced the traditional buffer-tube interface with a robust, rear Picatinny mounting point which enables the butt stock to detach quickly for compact transport or tight storage without compromising repeatable return-to-zero.

Ergonomics were a primary focus in our design. The chassis accepts our new adjustable grip so shooters can customize trigger-finger distance to their preference, and the adjustable thumb rest lets you tune positioning for repeatability and comfort. Functionally, the Picatinny Chassis remains uncompromising. It keeps compatibility with mil-spec AR grips, accepts detachable AICS magazines, and retains the integrated ARCA rail along the forend with M-LOK slots for accessories. A forward spigot location gives optional ARCA length extension, and a NV bridge mount provides a clip-on thermal/optic interface. The result: a chassis that's transportable, configurable, and purpose-built for precision.

MAXIMUM MODULARITY

MINIMUM WEIGHT-ZERO RATTLE

The Gen 2 Adjustable Butt Stock is a billet-machined, adjustable butt stock built for repeatable fit and easy transport.

Designed for shooters who demand precision, modularity, and reliable fit, the Adjustable Butt Stock, Gen 2 is a purpose-built stock that attaches quickly to any 1913 Picatinny, or mil-spec buffer tube rear mounting interface, and pairs exceptionally well with our UD Chassis and Picatinny Chassis. Machined from a solid billet of 6061-T6 aluminum, the stock offers smooth, repeatable adjustments for cheek height and length-of-pull so you can dial in consistent eye-to-optic alignment and shoulder mount. Choose the fixed model for a stream-line, lightweight option, or the folding model for the ultimate compact carry and storage solution. Cerakote finish, optional bag rider, and manufactured in the USA, this stock makes your build more modular, easier to pack, and faster to configure in the field.

ENHANCE YOUR RIFLE BUILD

Discover the ultimate convenience with Ultradyné Chassis combos, designed to streamline your rifle build. With a chassis, butt stock, and grip included, all you need to do is drop in your action and tighten the action screws. The one-piece Chassis delivers a lightweight foundation. Paired with the Ultradyné Gen 2 Adjustable Butt Stock in either a fixed or folding variation, it beats most factory stocks in weight while offering the option to detach is for easier packing or transportation.

ONE PIECE INTEGRITY

OPTIMIZED FOR STRENGTH AND WEIGHT

The Ultradyné Chassis is crafted from a solid bar of 6061 T6 Aircraft Aluminum for exceptional strength and durability. The one-piece design weighs between 1.1 and 1.3 pounds, depending on the model. When paired with the Ultradyné Adjustable Butt Stock, it is lighter than most factory stocks yet has the ability to add up to 5 pounds with optional weights.

The Ultradyné Chassis is packed with features including an adjustable magazine release lever, compatibility with AICS magazines, ability to work with any Mil-Spec butt stock, a built-in Arca rail, M-LOK slots on three sides, and Dynalock technology to ensure a secure fit. The action is held in place with V-channel bedding that can accommodate free-floated barrels up to 1.35 inches in diameter.

ADD NIGHT VISION TO YOUR CHASSIS

A Bridge is a useful accessory that attaches to the M-LOK slots on each side of Ultradyné Chassis. This provides a strong interface that positions the Picatinny rail of the bridge at the correct height for mounting most night vision and clip-on thermal devices. The Bridge is an essential component for shooters who use night vision and want to securely attach it to their UD Chassis, or Picatinny Chassis.

ADD WEIGHT TO YOUR CHASSIS

FOREARM WEIGHTS SOLD IN PAIRS

The UD Forearm Weights are sold in pairs and are designed to be added to M-Lock slots on the forend of your Chassis to help balance the firearm for improved shooting performance. These weights can be attached to the forearm of the chassis, providing added weight and stability to the firearm. This can help improve accuracy and reduce recoil, making for a more enjoyable shooting experience.

ADD LENGTH TO YOUR UD BUTT STOCK

In today's shooting world, modularity is key. A 6'6" shooter and a youth hunter will have a completely different length of pull. The UD Butt Stock Spacer Kit offers an additional inch of customization, in quarter-inch increments. Four sets of screws are sent with the kit for proper fitment no matter the number of spacers in use. The kit is compatible with the UD Lightweight Butt Stock and UD Adjustable Butt Stock, Gen 2.

MAXIMUM ACCURACY, MINIMUM RECOIL FOR LONG RANGE PERFORMANCE

The Ultradyné Orbit Ballhead is designed specifically for shooters, with the adjustment wheel strategically located under the forearm. This unique design feature allows the shooter to operate without the need to reposition the hand away from the shooting position. The ballhead comes standard with the Arca-Pic Clamp and Dynalock Barricade to be utilized in every scenario. When used in combination with the UD Chassis and UD Launchpad, a full range of aiming with almost no recoil is achievable.

REDUCE RECOIL WITH THE UD LAUNCHPAD

The Ultradyné LaunchPad is designed to reduce recoil and maintain the natural interface between the rifle and shooter. It features a 3/8-16 thread at the top of a 7/8-inch solid steel vertical adjustment bolt that comes with the UD Orbit Ball Head attached, and has the option to add the Grasp Gun Vise for bench work or clamping factory stocks.

This system offers the ability to add lead shot, sandbags, or even gym weights (with the optional adapter) to the front plate. Transferring recoil of a firearm to a weighted LaunchPad by using a locking interface like UD Dynalock or Picatinny affords the user a natural shooting position with the shoulder against the buttstock and a wide range of motion for aiming.

STRONG, STABLE, ADAPTABLE

The Ultradyme Carbon Tripod is a versatile and durable piece of equipment that is suitable for both competition and remote hunting locations. It comes with two different stud sizes, 3/8"-16 and 1/4"-20, which accommodates a wide range of accessories such as cameras, binoculars, spotting scopes, and rifles. This tripod can support up to 50 lbs.

The UD Carbon Tripod is adjustable, making it suitable for anyone and any shooting position. It can be adjusted from 6.75" to 69.75" from the ground. The center column is also adjustable up to 12" allowing users of multiple heights the ability to look through the same optic with a quick twist of the column locking nut.

The legs of this tripod are made of multi-layered carbon, making them lightweight and compact. This makes the tripod easy to transport and set up, even in difficult or remote locations. Overall, the Ultradyme Carbon Tripod is a high-quality piece of equipment that is perfect for anyone who needs a reliable and versatile tripod.

PROVIDES ROCK SOLID STEADINESS WHEN ENGAGED

The UD Dynalock Barricade has two studs that can be inserted into any Ultradyn Chassis or Ultradyn Dynalock Arca Rail with a simple upwards movement. When engaged, the Dynalock does not allow any forward or back movement of the Barricade. It comes standard with the Ultradyn Arca-Pic Clamp.

UPGRADE TO ARCA AND DYNALOCK

The UD Arca Dynalock Rail can be installed using the M-LOK fasteners provided or by a qualified gunsmith. By upgrading to the Arca Dynalock Rail, you can enjoy the benefits of both Arca and Dynalock accessories on your firearm. The most popular enhancement is the ability to use the Orbit Ballhead with Dynalock, all other Arca accessories are also compatible.

ULTRA LIGHTWEIGHT, FULLY ADJUSTABLE

The Ultradyné Quantum Gas Block is a precision-engineered component designed to enhance the performance and versatility of the popular AR platform. Built with durability and reliability in mind, this gas block is well-suited for both professional and recreational shooters seeking optimal control over their firearm. The adjustment screw boasts 12 distinct adjustment points. Each point corresponds to a specific gas flow setting, enabling the shooter to customize the rifle's cycling characteristics to suit their individual needs. The Quantum Gas Block allows the shooter to completely control the back pressure while using a suppressor to produce the optimal shooting experience.

CLASS-LEADING PERFORMANCE

Sets the standard for performance by providing breakthrough recoil reduction and unparalleled muzzle compensation for those who refuse to settle for second best. Utilizing advanced imaging and precision instrumentation, Ultradyné engineers have created an ultra-high performance, competition level compensator. Ultradyné's V-PORT™ design mitigates muzzle rise and keeps gas from the sight picture. Experience smooth, on-target recoil compensation in a competition-legal package. Dynamount® compatible and a timing nut is included for easy installation.

All Ultradyné muzzle devices are CNC machined stainless steel.

EXTREME RECOIL REDUCTION WITH LESS PERCEIVED BLAST

Apollo S provides competition level recoil reduction and muzzle control. Ultradyné's V-PORT™ design mitigates muzzle rise and keeps gas from the sight picture. By using a scientific approach and studying thousands of recoil events, Ultradyné engineers have struck a balance between extreme recoil reduction, virtual elimination of muzzle rise, and less aggressive venting of gas. The Apollo S is perfect for shooters who want drastic recoil reduction with a less perceived blast. Dynamount® compatible and a timing nut is included for easy installation.

All Ultradyné muzzle devices are CNC machined stainless steel.

FORWARD-DIRECTED SIGNATURE FOR GREATER SHOOTER COMFORT

Athena is Ultradyné's linear compensator. Muzzle rise has been optimized, with gas vented at an angle then forward. This sends a lower percent of sound and gasses back towards the shooter. Athena gives a cleaner appearance for a sleek look and is a cost-effective way to upgrade a rifle to the Dynamount® Sighting System. A timing nut is included for easy installation. A crush washer is included with the Athena AK47 model.

All Ultradyné muzzle devices are CNC machined stainless steel.

ULTIMATE FLASH REDUCTION

Nighthawk Flash Hider is a birdcage style flash hider, engineered to reduce muzzle flash that can impair the eye's night vision in low light. A solid undercarriage decreases the chance of a dust cloud forming while shooting from a prone position. Nighthawk also reduces muzzle rise which results in faster follow-up shots with increased accuracy. Dynamount® compatible and a timing nut is included for easy installation.

All Ultradyné muzzle devices are CNC machined stainless steel.

DYNALIGN SIGHT PICTURE TECHNOLOGY

The ultimate BUIS. It starts with a superior always centered aperture that mounts to the barrel to ensure accuracy. Windage and elevation adjustments are both available along with the ability to set at 90 or 45 degrees. Using the C4 Dynamount® Front Sight in conjunction with the C4 Rear sight creates a perfectly concentric sight picture that allows the shooter to see the target, enables faster sight acquisition, reduces the effect of parallax, and gives the ability to consistently shoot accurately out to 600 yards and beyond.

Most of the time, shooters mount front sights on the picatinny rail of a free-float handguard. By definition, a free-float handguard doesn't move with the barrel. This means that when the handguard moves, the sights do too. Even properly-installed handguards move, whether it's from the weight of the firearm, a strong grip, or impact. Especially at the end, farthest from the point of attachment, and where most users mount sights. A small amount of movement can make a big difference in point of aim. Movement as little as 0.01 inches at the handguard means almost 2 inches at 100 yards. The solution is Dynamount®. Barrel-mounted sights for consistent aim, every time. The C4 Sight picture provides more accurate and faster target acquisition, using a purely concentric sight picture that is similar to that used by Olympic target shooters. Unlike red-dot or holographic sights, this sight picture does not obscure the target and actually enhances visibility due to the optical characteristics of apertures.

Most BUIS systems utilize a sight picture that is non-intuitive. The brain's visual systems are asked to align a circular rear aperture with a rectangular front post shape while simultaneously ignoring the "ears" that protect the front sight post. The C4's circle-within-circle sight picture allows for faster sight picture acquisition. Additionally, the use of a front aperture further reduces parallax effect which makes accuracy less dependent on precise sight alignment.

All Ultradyné Dynamount® Sights are CNC machined stainless steel & aircraft aluminum.

CONCENTRIC SIGHT PICTURE

The C4 Front & Rear Sight System is a dual aperture sighting system that is changing the way shooters think about iron sights. The C4 Rear Sight offers rock-solid performance in a compact form with a ballistically calibrated elevation system that adjusts in 50-yard increments from 200 to 600 yards. The C4 Front Sight brings precision front aperture technology to backup iron sights along with the ability to adjust both windage and elevation. Using these sights together creates a perfectly concentric sight picture that allows the shooter to see the target, enables faster sight acquisition, and gives the ability to consistently shoot accurately out to 600 yards and beyond, all with compact, foldable iron sights.

All Ultradyné C4 Sights are CNC machined stainless steel & aircraft aluminum.

CONCENTRIC SIGHT PICTURE

The C4 Offset Front & Rear Sight System is a dual aperture sighting system that is changing the way shooters think about iron sights. The C4 Offset Rear Sight offers rock-solid performance in a compact form with a ballistically calibrated elevation system that adjusts in 50-yard increments from 200 to 600 yards. The C4 Offset Front Sight brings precision front aperture technology to back up iron sights along with the ability to adjust both windage and elevation. Using these sights together creates a perfectly concentric sight picture that allows the shooter to see the target, enables faster sight acquisition, and gives the ability to consistently shoot accurately at targets close and far. C4 Offset Sights are your best option for back up iron sights.

All Ultradyme C4 Sights are CNC machined stainless steel & aircraft aluminum.

DYNALIGN SIGHT PICTURE TECHNOLOGY

Packs all the high-quality features Ultradyme is known for into lightweight, compact, sight system. Fully machined from the perfect combination of 416 SS and aircraft aluminum to maximize strength and weight. The rear sight boasts a positive click oversized windage knob which serves as storage for the .070 aperture when using the ghost ring. The C2 Front Sight System makes sighting in a breeze by offering both windage and elevation adjustability. The C2 Sight combo offers a dual aperture system that features a 12 MOA front sight aperture and gives the advantage of lightning-fast target acquisition while improving accuracy. Improved accuracy is created by the enhanced clarity and reduction of parallax due to the optical characteristics of the C2 dual aperture. In addition, the C2 enables the shooter to see 100% of the target, not cover it. This promotes proper shooting techniques and allows the shooter to focus on the only thing that matters, the target!

All Ultradyme C2 Sights are CNC machined stainless steel & aircraft aluminum.
