P A P E R B A G S

Paper bags are more than just carriers; they're an **extension of your brand**.

Crafted from **strong, eco-friendly** kraft paper, they combine durability with a premium look, making them ideal for cafés, restaurants, and retail use.

With **custom sizes and high-quality printing**, our bags turn every takeaway into a branding opportunity.

Practical, **sustainable, and stylish**, the perfect packaging solution that leaves customers carrying your identity with pride.

Sugarcane bowls are the **eco-friendly choice** for modern food service.

Crafted from renewable bagasse (sugarcane fiber), they are **100% compostable**, combining sustainability with strength.

Perfect for hot and cold meals, these bowls resist leaks and grease while offering a **natural, clean look**.

You deliver not only great food, but also a message of **care for the environment**.

BAGASSE ADVANTAGES

Crafted from renewable plant fibers, our innovative Bagasse range is 100% plastic-free and non-toxic, perfectly supporting a zero-waste lifestyle."

SUSTAINABLE & PLASTIC-FREE

Plant Fiber – Non-toxic

Made entirely from reclaimed sugarcane pulp. These products are fully biodegradable and compostable, leaving no harmful residue behind.

OIL & WATER RESISTANT

Oil Proof – Water proof

Engineered with natural resistance to handle hot oils and liquids efficiently, ensuring a leak-proof experience for all types of meals.

MICROWAVABLE & FREEZER SAFE

-18°C – 200°C

Robust design safe for freezing and reheating. Naturally breaks down into nutrient-rich compost after use.

No trees need to be cut down; instead, bagasse waste is given a new lease on life. The compost residues fertilize and improve soil health. Choosing a new material means choosing a better lifestyle.

Premium Plastic Cups for Food & Beverage Brands

Consistent Quality • Custom Branding • Reliable Supply
Cafés | Juice Bars | QSR | Events

Manufactured from food-grade **PET and PP** materials, BLU cups deliver **clarity, durability, and consistent** performance for cold beverage service.

Available in **multiple sizes** with **compatible lid** systems, supporting scalable foodservice operations.

Custom branding options are available to support **private label** programs and brand consistency.

GUIDE TO PLASTICS

Plastic identification symbols

To help consumers identify plastics when sorting them for recycling, the plastics industry started a program of coding plastic packaging with a recycling symbol either on the top or the bottom of the package. The numbers are not in any particular order, resin was used to make that particular product. Check with your local council to determine if recycling is available for the plastic packaging you use.

Polyethylene Terephthalate (PET)

Polyethylene terephthalate is a condensation polymer that is widely used as a packaging material due to its toughness and clarity. It is widely used for the production of bottles for soft drinks and carbonated beverages, and is the most widely recycled type of plastic in the world.

Benefits

- Toughness
- Shatterproof
- Lightweight
- Recyclable
- Good barrier properties
- Clarity

Polypropylene (PP)

Polypropylene, in its natural state, is a fairly hard and cloudy material. Because of its chemical make-up it cannot be produced as a crystal clear material such as PET. It is one of the lightest plastics available with a range of thicknesses.

Benefits

- Good surface hardness and scratch resistance
- Good chemical resistance
- Excellent resistance to water and gas vapour
- Recyclable

Polyvinyl Chloride (PVC)

Polyvinyl chloride is strong and has excellent water and chemical resistance properties. PVC exhibits good weather resistance and abrasion resistance.

Benefits

- Ideal as a food packaging material
- Good clarity
- Tough

Polylactic Acid (PLA)

Polylactic Acid is a bioplastic made from renewable resources such as corn starch or sugarcane. It is considered an eco-friendly alternative to petroleum-based plastics, as it is industrially compostable under controlled conditions. PLA is usually transparent and widely used in packaging, cups, and disposable items.

Benefits

- Made from natural and renewable resources
- Industrially compostable under specific conditions
- Recyclable
- Good transparency and clarity
- Safe for food contact applications

Matched Lids

Pouches are crafted to deliver **freshness, protection, and style** in every pack.

Made with **high-barrier, food-grade materials**, they lock in flavor and crunch while keeping moisture and air out.

Available in **resealable and stand-up** formats, they're perfect for retail display and everyday convenience.

With **custom branding options**, our pouches turn simple packaging into a premium experience that highlights your product's quality.

Guide to Flexible Packaging

Choosing the Right Style, Material, and Function for Your Product

1. POPULAR BAG STYLES

- **Stand Up Pouch (Doypack):** The market standard for a standard packaging solution for your product.

Best for: Snacks, dried fruits, snacks, and confectionery.

- **Flat Bottom Bag (Box Pouch):** The premium choice to back seal for high barrier and product stability.

Best for: Specialty coffee.

- **Side Gusset Bag:** Traditional style, traditional variant for packable packaging and storage.

Best for: Bulk coffee.

- **Flat Pouches (3-Side / 4-Side Seal):**

Cost-effective and efficient form for portions, and products.

Best for: Spices.

- **Spout Pouch:** Replaces rigid bottles for aromatic, healthier contents and product.

Best for: Juices.

- **Roll Film:** Continuous film for even and consistent paper and continuous fill, and high-speed quality products.

Best for: High-speed + automatic equipment.

2. MATERIAL STRUCTURE (The Science of Layers)

Layer Position	Function	Common Materials
Outer Layer	Print & Finish	PET (Glossy) Matte BOPP Kraft Paper (Natural look)
Middle Layer	Barrier Protection	AL (Aluminum Foil): 100% block of light/oxygen VMPET: High barrier, metalized layer Transparent: Clear plastic layer
Inner Layer	Sealing	LDPE: Food-grade plastic, self-sealing

3. HOW TO CHOOSE? (Selection Checklist)

- Product Sensitivity:** Does it degrade with light or air... use **Aluminum Foil (AL)**
- Display Method:** Will it sit on a shelf? Choose **Stand Up...** Will it hang? Add a **Euro Slot**.
- Convenience:** Does the customer need to reseal it? Always add a **Zipper**.
- Filling Process:** Manual filling? Use **Pre-made Pouches**. Automatic machine? Use **Roll Film**.
