ABOUT US

Established by the Boffa family in 2002, born from our strategy to be the best at what we do.

Our plan was and remains today to provide quality products, services and support that all should expect. From the beginning we specialised in stylish Italian designed kitchen appliances and 2017 saw the expansion of our range to include complete Alfresco Outdoor Kitchen selection.

Today's strategy continues to be at the heart of everything we do. Growing with quality products, services and support that are provided and backed by our loyal customers throughout Australia. We pride ourselves on the services offered and most importantly the 'Euro peace of mind' after sales support.

An integral part of our business is the valued industry partnerships that have grown between Euro, our distributors and builders. We appreciate these existing close relationships and extend an open invitation for you to be part of the Euro family.

A handwritten signature in black ink, appearing to read "Mario Boffa".

Managing Director, Mario Boffa

DISCLAIMER

The information contained in this catalogue is given in good faith and represents the best of our knowledge at the time of printing. It is your responsibility to ensure that our products are used in accordance with any applicable Australian standard. Our technical information and instructions are recommended and permitted for the uses they are intended.

We also reserve the right to update any information without prior notice to reflect our continuous product development. Country specific recommendations, dependent on local guidelines, codes of practice, building regulations and industry standards, may affect installation recommendations. Our products and services are subject to specific terms, warranties and exclusions, which may have been disclosed to your prior or are otherwise available to you on request. We recommend that you read our guidelines to form familiarity.

GENERAL FEATURES

Your ultimate oven function guide

FAN FORCED

This method of cooking uses the circular element located around the fan while the heat is distributed, resulting in a faster, more efficient operation. Cooking with the fan on allows different kinds of food to be cooked simultaneously on different shelves, preventing the transmission of smells and tastes, from one dish onto another

CONVENTIONAL

This method of cooking provides traditional cooking with heat from the top and lower elements. Particularly suitable for traditional roasting and baking on the centre shelf only.

LOWER ELEMENT ONLY

This method of cooking uses the lower element to direct heat upward to the food. For slow-cooking recipes or for warming up meals

FULL GRILL

This method of cooking method is normal static grilling utilising the top elements, which directs heat downwards onto the food. Suitable for grilling medium to large portions of sausages, bacon, steaks and fish

HALF GRILL

Half grilling allows you to toast/brown all of your favourite recipes in a smaller area

FULL GRILL + FAN

This method of grilling uses the full top element in conjunction with the fan, to grill meat without the need to turn. Suitable for steaks such as hamburgers and large

FAN & BOTTOM HEATING ELEMENTS

This method of cooking uses the circular element located around the fan

THERMO FAN ASSISTED

To have a rapid and even cooking covering both fast and delicate recipes using both upper and lower heating element including the fan

DEFROST

The fan runs without heat to reduce the defrosting time of frozen foods. The time required to defrost the food will depend on the room temperature, the quantity and type of food. Remove frozen portions of meat completely from packaging and place over the grill rack to allow proper circulation.

AIR FRY

This method of cooking enables intense heat and maximised airflow to cook food without oil. A healthier cooking alternative without the need to sacrifice taste

STEAM

This method of cooking supports healthier cooking alternatives, that preserve moisture without sacrificing on taste

PYROLYTIC

This method of cooking uses high temperatures of up to 300°C to turn grime, grease, crumb and fat build up to ashes. An effortless way to clean, whilst minimising the use of hard chemicals

OVEN LIGHT

When selecting a cooking function, the oven light turns on and once the selected temperature is achieved, the light remains on for another 3 minutes
