Welcome to WOLFSBLUT

For almost 20 years the WOLFSBLUT brand has stood for proper, nutritionally balanced dog food: The combination of high-quality meat or fish as the chief ingredient and selected fruit, vegetables and superfoods comes the closest to the natural diet of a wolf. And thus also the needs of our dogs.

As a pioneer in the industry, we returned to an original and nutritious diet in 2006. Because we know what dogs and owners need for a long, healthy and happy coexistence - and what they don't.

What we stand for

- ✓ **Modelled on the wolf**
Species-appropriate dog food
- ✓ **Plenty of meat or fish**
Original flavours
- ✓ **Grain-free/gluten-free recipe**
The wolf does not hunt for cereals
- ✓ **Valuable superfoods**
With nutrient-rich ingredients

The WOLFSBLUT quality promise

- ✓ **No artificial ingredients (apart from essential vitamins and minerals)**
- ✓ **Natural raw materials in tested quality**
- ✓ **Individual raw material procurement from selected companies**
- ✓ **High food standards in production**
- ✓ **Regularly tested according to the latest nutritional knowledge**

Recognise the inner values from the outside: with the WOLFSBLUT symbols.

Wolves might get jealous: our large range of WOLFSBLUT flavours.

Meat, poultry and fish: WOLFSBLUT adds variety to your dog's diet. Our wide variety of flavours caters for every taste and every dog. Thanks to several flavours with hypoallergenic protein source, not only for simple omnivores, but also for allergy sufferers.

Flavours:

Australian Black Angus Beef is very high in fat and provides lots of important nutrients.

Horsemeat is not a mass-produced product. It is one of the *hypoallergenic* protein sources and most well tolerated and easily digestible meats, has a high proportion of the unsaturated fatty acids Omega 3 and 6, is rich in protein, contains eleven different amino acids, as well as the vitamins B12, B6 and B3 and has a high iron and calcium content.

Lamb contains many important minerals, primarily iron, zinc and niacin – important for cell and blood formation, strengthening the immune system, energy generation as well as the nervous system.

Game is nutrient-rich and has a spicy and at the same time very natural taste.

Rabbit is considered a protein-rich, low-calorie energy source with high iron and magnesium content. Thanks to its *hypoallergenic* properties, it is also easy to tolerate by animals susceptible to food allergies.

Goat is a *hypoallergenic* protein source, contains little fat and cholesterol and is rich in protein, minerals and vitamins.

Venison is practically fat-free and very filling thanks to the valuable and high-quality protein.

Wild boar is easily digestible and provides the dog with high-quality proteins, essential fats as well as vitamins and trace elements.

Camel is one of the *hypoallergenic* protein sources. The meat comes from wildlife species from Australia, where abandoned animals become a nuisance as they have no natural enemies.

Kangaroo meat comes from wildlife animals, is free from hormones and drugs and as a *hypoallergenic* protein source is very well tolerated.

Water buffalo meat is food grade quality, comes from pasture-reared animals and is free from hormones and drugs. Water buffalo meat has a high vitamin content, is low in fat, very rich in protein and contains the polyunsaturated fatty acids Omega-3 and Omega-6. It is one of the *hypoallergenic* protein sources.

Duck contains valuable B vitamins, including vitamins B1, B2, B6, B12 and niacin, as well as relevant amounts of minerals such as iron and zinc.

Chicken is low in fat, easy to digest and provides valuable protein as well as magnesium and potassium and valuable B vitamins.

Goose has nutritious proteins and a high level of essential linoleic acid.

Turkey is rich in protein, low-fat and contains the essential minerals and trace elements potassium, iron and zinc, as well as the vitamins B1, B2, B6 and B12.

Ostrich meat is very lean, rich in protein and very low in cholesterol compared to other meats.

Trout contains a high proportion of valuable Omega-3 fatty acids and high-quality proteins.

Salmon contains a high amount of Omega-3 fatty acids, has plenty of iron, magnesium and potassium, and is rich in vitamin B6 and protein.

Tuna is particularly rich in protein and provides various minerals such as iron, zinc, magnesium or iodine.

As a high-fat fish, **herring** contains a large amount of Omega-3 fatty acids and is a good source of protein, vitamin D and vitamin B12.

Low-fat **cod** contains valuable potassium, magnesium, vitamins A, B1, B2 and vitamin D.

White Ocean Fish also has a low fat content and is full of important Omega-3 fatty acids, vitamin B12 and selenium.

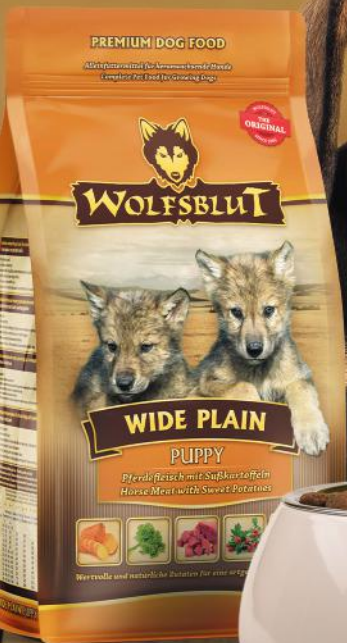

Tips for the changeover of your WOLFSBLUT food for puppies

Similar to an adult dog, the **changeover of food for puppies is generally made over at least 7 days**, ideally 10 days. Puppies often have a more sensitive stomach than adult dogs.

Extend the time as needed if your puppy does not tolerate the changeover of food very well. In this case only increase the mixing ratio when the digestion has returned to normal.

Proceed as follows if your puppy has just moved into your home and you would like to change his or her puppy food. Give the puppy at least 3 days to settle into their new home - this is an upsetting and unsettling time. Only start the changeover of food to the desired puppy food after the „settling-in phase“.

Diarrhoea in puppies can quickly lead to a critical situation as the puppies can lose a lot of fluid rapidly. Therefore, consult a vet in good time if uncertain or in the case of abnormalities.

Congratulations, your puppy has grown up! Tips for the changeover of WOLFSBLUT food:

Depending on their size, puppies move onto WOLFSBLUT ADULT food when they are around one year old (large dogs: one and a half years).

If you want to change your dog's feed to one of our WOLFSBLUT ADULT products, you should do this gradually and replace the current feed bit by bit: Our dogs' intestinal flora needs some time to adjust to a new food composition.

To avoid upsetting the digestion, a slow change is recommended, which can prevent initial digestive problems. Use this simple step-by-step guide to change your dog's feed to your new WOLFSBLUT feed.

Before you start changing the feed:

Please keep in mind that you need not only the new feed, but also a bit of the feed, you are currently using. Check whether there is enough left: For a change over seven days, you should still have about four days' rations of the previous feed in stock.

General information about changing feed

For dogs to tolerate the change to a new feed well, the change should never happen overnight. As a rule, seven days are sufficient for a gradual change of feed.

For **older dogs** or dogs with **sensitive digestion**, the transition should be even slower, and a minimum of ten days should be allowed. To do this, extend each phase of the feed change by at least one day.

Days 1 and 2

Replace **a quarter** of the previous feed with your new WOLFSBLUT dog food.

Days 3 and 4

Replace **half** of the previous feed with your new WOLFSBLUT dog food.

Days 5 and 6

Replace **three quarters** of the previous feed with your new WOLFSBLUT dog food.

From day 7

The **entire portion** now consists of your new WOLFSBLUT dog food.

What should be considered for the changeover of WOLFSBLUT food for seniors?

Depending on the size of the dog, a dog is considered to be a „senior“ from a certain age.

For small dogs this is roughly from 10 years old and large dogs are considered seniors from around 7 to 8 years old.

Metabolism and digestion may slow down slightly in older dogs and the dog's energy requirement and need for vitamins, minerals and other substances change.

Then it is time to move your pet onto a special food formula, e.g. WOLFSBLUT BLACK BIRD SENIOR. As the digestion of older dogs often adapts to new food at a slightly slower pace, it is useful to extend the changeover of food for seniors to 10 days or more. Extend each phase of the food changeover by at least one day.

Dry food

Our dry food makes it so simple to properly feed dogs: It has a long shelf life, is easy to portion, has a relatively neutral odour, does not make a mess or have to be chilled and is therefore also the most practical solution when you are out and about. The fact that our recipes are carefully planned, grain-free and sufficient is a point of honour at WOLFSBLUT.

Dry food PUPPY

- grain-free recipe
- high meat content
- pellet size optimised for puppies and young dogs
- well tolerated and highly digestible
- contains no artificial preservatives
- contains no added colourants and flavourings

High-quality food adapted to nutritional requirements is essential so that small puppies can grow big and strong and grow up healthy. WOLFSBLUT PUPPY dry food is designed specially for this important phase of life and provides the small, energetic animals with everything they need. Selected and natural ingredients with high energy density provide your dog with food in the most appropriate and natural way. The extra-small kibble size is perfect for puppies. WOLFSBLUT PUPPY dry food is available in 7 tasty flavours.

Dry food PUPPY · LARGE BREED

Large breed puppies not only grow very quickly but also longer than other smaller dogs. In order to be able to meet the associated needs, WOLFSBLUT developed a range of food which supports these puppies and young dogs: WOLFSBLUT PUPPY LARGE BREED dry food has a higher energy content, uses slightly larger PUPPY kibbles and also contains a joint supplement which aims to prevent the typical joint problems of larger dogs.

Available in:

Original size:

- grain-free recipe
- high meat content
- balanced formula for puppies and young dogs of large breeds
- well tolerated and highly digestible
- contains no artificial preservatives
- contains no added colourants and flavourings

Dry food ADULT

- grain-free recipe
- high meat content
- well tolerated and highly digestible
- contains no artificial preservatives
- contains no added colourants and flavourings

When the wild puppyhood stage has passed and growth is complete, the ADULT dry food from WOLFSBLUT covers the energy requirement of adult dogs. While the energy density of the food now decreases again slightly, the kibbles are bigger and can be optimally absorbed by your dog. Like with all WOLFSBLUT products, we do not use any unnecessary bulking agents such as grain and we rely on proper sources of nutrients and a high meat or fish content.

Dry food SMALL BREED · ADULT

- grain-free recipe
- high meat content
- balanced composition especially for small breeds
- suitable for allergy sufferers and dogs
- with allergic tendencies
- contains no artificial preservatives
- contains no added colourants and flavourings

When the wild puppyhood stage has passed and growth is complete, the SMALL BREED · ADULT dry food from WOLFSBLUT covers the energy requirement of adult dogs. While the energy density of the food now decreases again slightly, the kibbles are bigger and can be optimally absorbed by your dog. Like with all WOLFSBLUT products, we do not use any unnecessary bulking agents such as grain and we rely on proper sources of nutrients and a high meat or fish content.
