EASY INSTALLATION IN 4 QUICK STEPS

Once kit has been disassembled, position hose end on shell flush with grooves.

Insert Fitting into groove and position shell opposite shell.

With assembly in hand, squeeze forward ends of shells and push and twist retaining ring over shells to its final position.

Insert barb into fitting. (Threaded end of barb should be greased.) Push and turn to start threads. Using a 5/16" hexagon key continue to push and turn until the barb is flush inside the fitting.
NOTE: Check final assembly visually to insure that hose has not shifted during assembly.

AIR BRAKE HOSE

- The uniform design consists of interwoven spirals providing greater flexibility and improved twist resistance compared to other spiral designs
- Layers of the hose wall are fully bonded to enhance kink resistance, enabling tighter bends
- The rugged elastomeric hose cover is resistant to gasoline, diesel fuel, oil and commonly used road and cleaning chemicals
- The hose cover may be perforated in some sizes to allow moisture to escape from the reinforcement layer
- UV and ozone resistant
- Designed for operating pressures up to 225 psi
- Operating temperature of -40°F to +200°F (-40°C to +93°C)
