

## PRESS RELEASE

[18-06-2023, Pune, Maharashtra] - Minimac Systems, a clean-tech company hosted a blood donation camp recently at their plant Chakan adhering to all the necessary safety protocols. The camp was aimed at collecting blood from willing donors to replenish the blood banks in the local hospitals. Minimac Systems is committed to making a positive impact in their community, and is proud to have organized this blood donation camp in partnership with Serological Institute Blood Bank.

Minimac Systems is also pleased to share that they extended an invitation to several other companies in the Chakan area to participate in blood donation camp. Every year, countless lives are saved by the precious gift of donated blood. It's a simple act of kindness that can have a profound impact on the world, and on your own health. At Minimac Systems, they believe in the power of giving back to the community. The statement emphasizes the necessity for more camps that serve a social cause, considering the vast population in the country living below the poverty line. Furthermore, it highlights the Department's satisfaction in humbly working towards addressing this critical need and making tangible difference in the lives of others.

They also believe that every organization has the power to make a difference, no matter how big or small. That's why they are urging other companies to follow their lead and initiate similar events that can help save countless lives. Together, we can create a better world for everyone. Let's work together to save lives, one donation at a time.
