WARIOBAORD

Somehow the same product like the others,
yet with different characteristics

Description:

Using high-tech European machinery and very top quality raw materials, Baran Tejarat has been able to launch and introduce new series of laminated boards into the market known usually as High Gloss panels. The main difference is the film we use; we always use PET European film instead of PVC used by others. PET film surfaces could be both in high gloss and supermatt finishes. These boards are composed of top quality MDF board as core, high quality PET films (uni-colors or wood decors both in High Glossy or SuperMatt finishes) and high quality PVC film on back side of the board. WARIOBOARD could be produced using PET films of same décors or colors on both sides of the board.

Our PET films have got one protective layer. We do also use another protective layer on top.

PET Film Specs:

Environmentally friendly, safer to store materials, very durable, higher transparency than PVC, less weight, higher & better formability against heat (Thermoforming), clearer and cleaner appearance, very high resistance to pressure & impact, having a very shiny surface, very suitable barrier against gas & moisture, unbreakable & uncrushable, anti-scratch, anti-fingerprint, and excellent recycling capability

Types:

Both SuperMatt and High Gloss, Uni-Color or Wood Design

Standard Size:

2800*1220*16 MM

Pallets:

20 Boards / 1 Pallet

****Any other thickness is available, based on request.**
