

Hik-Connect 6

for Teams

IP Speaker Solution

Louder | Broader | Cross-device linkage

Cloud-managed IP Speakers

deliver real-time and scheduled broadcasts through centralized management, reducing deployment and maintenance costs while providing reliable, scalable voice broadcasting accessible from browsers or the mobile app. The advanced cross-device linkage solution enables easy deployment and remote control.

Key Features of Hik-Connect Team

Real-time broadcast

- Real-time broadcasting from web portal and mobile app, anytime and anywhere
- Support up to 16 speakers broadcasting to expanded coverage areas

Scheduled broadcast

- Batch-upload audio files (MP3, WAV, AAC) for unified management and cloud storage, up to 200MB total (max. 100MB per file)
- Create scheduled broadcast tasks by batches with customizable frequency, execution time, volume, and priority settings, etc

Cross-device linkage

- Audio deterrence automatically triggered by events / alarms from CCTV, access control and alarm systems
- Audio deterrence with audio file or Text-to-Speech (TTS) in 5 languages

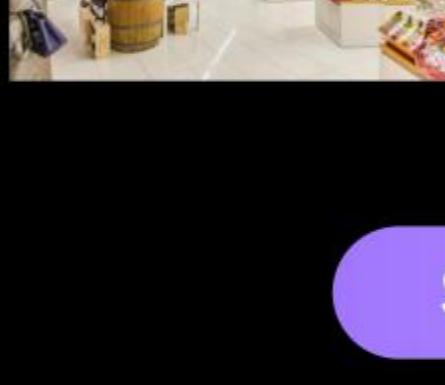

Centralized management

- Remote health monitoring to detect and resolve failures promptly
- Remote configuration and upgrade
- Unlimited user sharing of IP Speakers for convenient enterprise management

Typical Scenarios

Retail / Chain Stores

Background music
Emergency mustering

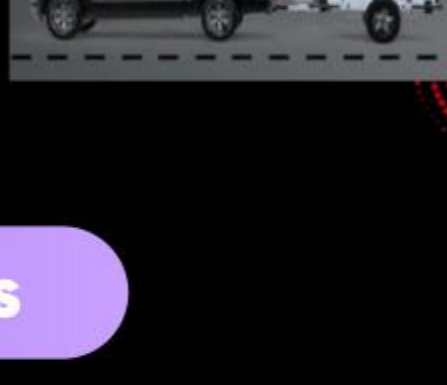

Perimeters

Audio warnings for security

Remote Unattended Sites

Live broadcast for notifications
Event-triggered broadcast

Smart Applications

Real-time broadcast

Real-time broadcast from web portal and mobile app, anytime and anywhere.

Security staff communicate with intruder on-site through live audio, providing auditory warnings without traveling to the remote location.

Scheduled broadcast

Upload audio files and create scheduled broadcast tasks by batches.

Scheduled background music broadcasts to create the perfect atmosphere and enhance customer experience.

Cross-device linkage

Broadcast according to live videos, emergencies, evacuations, etc.

When emergency happens, security staff can conduct enhanced evacuation according to live videos.

Automated audio alerts triggered by security events from CCTV, access control and alarm system.

When a security device detects an event, speakers automatically activate to deliver immediate and effective audio warnings.

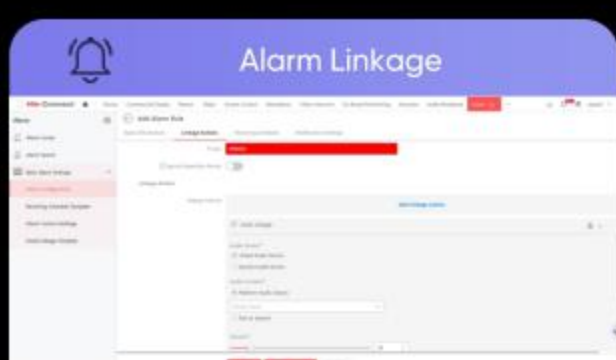

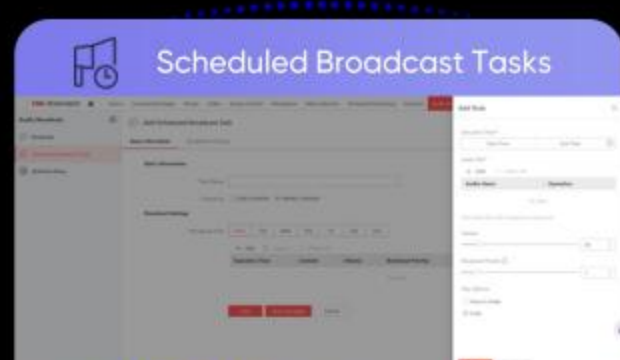

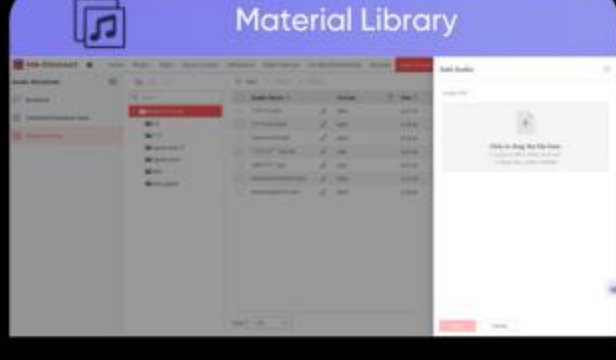

Topology

Both portal & app
