

**First time ever at ONS, stand 3158:
See the 6m high model of the World Wide Wind 24MW contra
rotating, floating offshore wind turbine**

Visit the World Wide Wind stand to see our optimized design for floating offshore wind. The design includes:

- Light elements above water, generator placed at the bottom of the structure
- 24MW turbine available by 2030 and scalable beyond 40 MW
- Easy installation and maintenance, no need for specialized vessels
- Higher power density due to increased scalability and reduced wake
- Design allows for high degree of local content as well as use of recyclable materials
- LCOE below 50USD/MWh
