Rated Excellent

Welcome to the annual meeting place for the concrete community

Richard Bradbury
Event Director

A huge thank you to everyone who has helped make this year's show bigger and richer in content than ever before.

Across the **Concrete Connect Seminar Theatre**, leading experts from the sector will be sharing insights and sparking debate on the issues shaping our industry—from lower-carbon concrete in practice and advanced carbon materials to digital monitoring, performance verification, sustainable precast by design, concrete patch repair, and the impact of ternary and calcined cements on concrete performance.

Our thanks also go to the professional associations and trade bodies supporting the **Find Your Community** feature—the place to grow your network, explore career pathways and tap into a wealth of technical expertise.

Don't miss the new **Live Demo Zone**, where trailblazing companies are putting equipment and solutions through their paces in real time—and inviting you to get involved.

We're also proud to recognise the inspiring individuals shortlisted for the **Emerging Talent Awards**, whose passion and commitment are helping to shape the future of the sector.

Be sure to visit the café at the heart of the show, where **The Concrete Society** is showcasing a photographic gallery celebrating the outstanding winners of its 2025 awards.

And while you're here, explore the expanded **New Product Hub**, featuring the latest innovations from our exhibitors. Don't forget to vote for your favourite using the token you received on entry.

Finally, thank you to all our exhibitors—whose numbers have grown by a stellar 21% since last year.

We hope you leave with new ideas, new connections, and new opportunities for your business.

Enjoy the show.

Thank you to our
sponsors

Join the debate!

The UK Concrete Show is committed to providing a seminar experience to enrich and engage the visitor.

The Concrete Connect Seminar Theatre, situated on the exhibition floor and expanded for 2026, features industry-leading experts presenting free-to-attend morning, lunchtime and afternoon sessions across both days.

Hosted by Susannah Streefer, a professional broadcaster and conference moderator, each session concludes with a panel and live Q&A with the audience.

Wednesday 25th March

Morning Session
10:15 - 11:30

From specification to site: sustainable concrete in practice

Our opening session brings together policy, specification, digital innovation and real-world project delivery to explore how the concrete sector is translating net-zero ambition into measurable outcomes on site.

10:15 - 10:20

Introduction

Susannah Streefer, Host

10:20 - 10:35

Sustainable and lower carbon concrete - an update on progress

Dr. Noushin Khosravi, Head of Sustainability, MPA UK Concrete

10:35 - 10:50

From waste to worksite: delivering rapid-hardening low-carbon cement made in the UK

Dr. Vaishnav Kumar Shenbagam, Research Fellow, School of Civil Engineering, University of Leeds

10:50 - 11:15

New advances in CEVO Digital: data-led decisions and carbon visibility

Joe Kirwin, Commercial Manager, RMX London Southeast, Tarmac

Lisa von Graevenitz, EMEA Account Director, Converge

Christopher Wellgreen, Sustainability, Carbon and Systems Manager, J Coffey Group

11:15 - 11:30

Panel discussion

Lunchtime Session

12:30 - 13:25

Shaping a more sustainable concrete infrastructure with advanced carbon materials

Discover how innovative carbons, including cost-effective graphene solutions, can enhance concrete performance and sustainability. Drawing on case studies, The Graphene Engineering Innovation Centre (GEIC), Concretene, and Advanced Carbons Council research, the session covers measurable benefits, testing approaches, scale-up challenges, and realistic adoption timelines for the industry.

12:30 - 12:35

Introduction

Susannah Streefer, Host

12:35 - 12:45

The emerging role of advanced carbons in concrete and what it means for industry

Dr. Chirag Ratwani, Technical Lead Materials, Advanced Carbons Council

12:45 - 13:00

Advanced carbons for construction

Mike Harrison, Chief Executive Officer, Concretene

13:00 - 13:15

Advancements in graphene-modified concrete: from lab to site

Dr. Lisa Scullion, Application Manager, GEIC, University of Manchester

13:15 - 13:25

Panel discussion

Afternoon Session

14:30 - 15:30

Properties of ternary and calcined clay concretes

This seminar will feature members of the Concrete Society task group updating TR74: Cementitious Materials. The seminar will provide information on the effect of ternary cements and calcined clay cements on the properties of concrete.

14:30 - 14:35

Introduction

Claire Ackerman, Chief Executive Officer, The Concrete Society

14:35 - 14:55

Understanding ternary combinations

Gareth Wake, Director, British Ready-Mixed Concrete Association, MPA

14:55 - 15:15

Understanding calcined clay concrete

Apostolos Tsoumelekas, Materials Engineering Manager, Skanska UK

15:15 - 15:30

Panel discussion

The speakers are joined by panellist Simon Chudley, Technical and R&D Director, LKAB and Prof. Leon Black, Professor of Infrastructure Materials at University of Leeds to take questions on concrete and cementitious materials.

Thursday 26th March

Morning Session

10:25 - 11:30

Precast & concrete repair spotlights

10:25 - 10:30

Introduction

Susannah Streefer, Host

10:30 - 10:50

Sustainable precast by design: practical pathways to lower-carbon concrete

This session explores how modern methods of construction, coupled with sustainable design, can transform the environmental performance of precast concrete. Andrea will introduce key themes from the new industry design guide, highlight innovative case studies, and discuss what the future holds for a sector striving to reduce carbon without compromising performance.

Andrea Charlson, Senior Built Environment Sustainability Specialist and Circular Economy Lead, The Concrete Centre

10:50 - 11:00

Q&A with Andrea Charlson

11:00 - 11:20

Patch repair: why common repair strategies can cause further problems

This session explains the incipient anode or halo effect in patch repairs in a clear, accessible way. It outlines the basics of steel corrosion in concrete, then shows how patch repairs can unintentionally accelerate corrosion around the repair, leading to cracking and spalling within 3-5 years. The session concludes by reviewing treatment options and comparing two common solutions, highlighting key performance limitations.

Christian Stone, Lead Materials Scientist and Technical Expert, Concrete Preservation Technologies

11:20 - 11:30

Q&A with Christian Stone

Lunchtime Session

12:30 - 13:30

Using maturity monitoring to establish element strength for identity testing

This session will look at data from Balfour Beatty Vinci on how digital maturity monitoring can establish element strength for identity testing in lieu of compressive strength testing.

12:30 - 12:35

Introduction

Steve Thorpe, Technical Director, The Concrete Society

12:35 - 13:00

Concrete digitisation: use of concrete maturity and match curing to assess in-situ strength of concrete structures

William Brentnall, Graduate Materials Engineer, Balfour Beatty Vinci

13:00 - 13:20

Digital monitoring of hardened concrete - maturity and strength development

Marcus Hine, Associate Director, OTB Concrete

13:20 - 13:30

Panel discussion

The speakers are joined by **George McArthur**, Senior Materials Engineer, BBV to take questions on maturity monitoring and digitisation.

Afternoon Session

14:30 - 15:15

Attracting, developing and retaining new talent in the concrete industry | Emerging Talent Awards

Leading industry figures **Claire Ackerman** (Chief Executive Officer, The Concrete Society), **John Reddy** (President, Institute of Concrete Technology), and **Lauren Fairley** (Executive Officer, Concrete Repair Association) discuss how the concrete sector can attract, develop, and retain new talent. They will explore how the sector is tackling the skills gap to meet the challenges of sustainability and digitalisation, and will review the training pathways and professional platforms that facilitate career progression. The session concludes with the presentation of The 2026 Emerging Talent Awards.

14:30 - 14:35

Introduction

Susannah Streefer, Host

14:35 - 15:00

Panel discussion with Claire Ackerman, John Reddy and Lauren Fairley

15:00 - 15:15

Presentation of Emerging Talent Awards for Design excellence; Materials specialist; Sustainability; and Precast & offsite

New Product hub

The **New Product Hub** returns for 2026, once again highlighting all the latest advancements in concrete technology and celebrating the ingenuity of companies pushing the boundaries of innovation, digitalisation, sustainability, and productivity.

A small selection of exhibitor submissions are shown here...

concreteshow.co.uk/new-product-hub

Stand:
C44

Progress Group

SPI 3D Concrete Printer

Additive manufacturing system using Selective Paste Intrusion to produce complex precast elements without formwork. Reusable sand bed supports three millimetre layer resolution, reducing material waste and embodied carbon while enabling customised façade panels, structural components and specialised precast units.

Scan to view more entries

XLINK

XLINK Macro Fiber

Macro synthetic fibre for structural reinforcement in floors, precast and shotcrete applications. Embossed surface enhances anchorage, supporting crack control, residual flexural strength and energy absorption. Chemically inert and non-corrosive, it disperses uniformly during mixing for use in aggressive environments.

Stand:
C14

Stand:
M4

Nebaco

Aluminum Formwork Systems

High-strength aluminum formwork for concrete structures with repetitive layouts. Precision-machined panels deliver consistent finishes and withstand pressures up to 90 kN/m², while lightweight 23 kg/m² construction supports manual assembly and faster floor cycles on residential and high-rise projects.

Volumech
Accu-Pour

Stand:
K10

Digital platform for managing scheduling, tracking and coordination across concrete delivery workflows. Web and mobile access unifies jobs, equipment, staff and inventory, enabling real-time monitoring, resource allocation and operational records across varied plant and fleet configurations.

Stand:
B32

Material Evolution

MevoXL

Concrete accelerator supporting rapid early strength in high-SCM mixes. Enables designs with up to 95% cement replacement while maintaining early-age performance, helping producers scale lower-carbon concrete across precast and ready-mix operations using established batching processes.

CONQUIP

Stand:
B21

**Conquip
Compact Concrete
Washout Unit**

Self-contained washout system for managing chute, pump and tool residue in space-constrained sites. Closed-loop filtration separates solids before pH treatment of alkaline wash water, enabling compliant reuse or disposal while improving site organisation and reducing environmental risk.

NUGENT

Stand:
D60

**Nugent
M-Series Truck Mixers**

New to market concrete mixer range engineered to improve mix quality, operational simplicity and driver usability. Drum geometry, control layout and integrated safety features support stable mixing across loading, transit and discharge, delivering predictable performance for ready-mix operations in daily use.

Stand:
C5

MUD
MIXER

**MudMixer
MudMixer® Continuous
Concrete Mixer**

Portable continuous mixer delivering steady, controlled output without batch mixing. Electric drivetrain and adjustable water input regulate moisture for concrete, mortar and stucco, while internal auger supports uninterrupted placement, streamlining labour and improving mix consistency on small to mid-scale jobs.

Stand:
J10

**Kimera
Kimera G740**

Compact mobile gravimetric mixer for on-site concrete production, mountable on standard 8x4 trucks or hook-lift systems. OIML C3 load cells enable precise weighing and repeatable mixes, while a counter-rotating twin-shaft mixer delivers consistent output up to 40m³/h with continuous refill.

Recognising the industry's Emerging Talent

Join us at The UK Concrete Show 2026 for the return of the Emerging Talent Awards, expanded with The Concrete Society to celebrate the next generation shaping the concrete sector.

The Awards recognise professionals aged 30 and under making a real impact, while highlighting the organisations supporting their development.

The 2026 programme delivers greater visibility and technical recognition across four categories: **Design Excellence, Materials Specialist, Sustainability, and Precast & Offsite.**

Find Your Community

Visit the **Find Your Community** area – the go-to hub for industry connections and support.

This dedicated space showcases our partner organisations, each offering valuable insights, expert advice, and tailored guidance to attendees.

It's an excellent opportunity to explore the advantages of joining these organisations, from professional development and networking, to exclusive resources and industry updates.

Whether you're seeking collaboration, career growth, or simply want to stay informed about the latest in concrete innovation, the Find Your Community area is the perfect place to connect, explore professional opportunities, and strengthen your ties within the concrete industry.

The Concrete Society | Stand E24

An independent membership organisation dedicated to supporting the use of concrete: Encouraging the exchange of knowledge and experience across all disciplines; promoting excellence in design, construction, appearance and performance; and driving innovation.

The Institute of
Concrete Technology

The Institute of Concrete Technology | Stand E23

Promoting concrete technology as a recognised engineering discipline and advancing the professional status of practicing concrete technologists worldwide.

Association Of Concrete Industrial Flooring Contractors | Stand E21

Representing specialist contractors and their associates in the construction of concrete industrial floors.

Structural Concrete Alliance | Stand E22

Bringing together the Concrete Repair Association, Corrosion Prevention Association and Sprayed Concrete Association to provide a single co-ordinated voice, and source of reference for the structural concrete refurbishment and repair industry.

ADVANCED
CARBONS
COUNCIL

Advanced Carbons Council | Stand E20

Serving the global community of engineers, scientist and R&D professionals with an interest in graphene and related 2D advanced materials.

MPA - The Concrete Centre | Stand E26

The Concrete Centre provides material, design and construction guidance to help professionals maximise concrete's structural, aesthetic and sustainability potential through effective design and specification. This includes published guidance, design tools, CPD seminars and training, in-person and online events and Concrete Quarterly magazine.

Flowing Screeds Association | Stand E28

The Flowing Screeds Association represents best practice, quality and technical excellence across the flowing screed and flooring sector. The association supports its members through training, guidance and industry collaboration, helping to raise standards and promote professional competence within the UK concrete and construction industries.

The Institute of Quarrying | Stand E25

Promoting the positive impact of the quarrying industry, the career opportunities available and supporting professionals working within it.

British Aggregates Association | Stand E27

Providing essential support and advice in all health and safety, planning, transport, environmental, technical and regulatory issues; whilst ensuring that the voice of the independent sector is heard at all levels of the UK administrations.

Find Your Community

UKCS **live** demo zone

New for 2026: The Live Demo Zone

See innovation in action.
Be part of the performance.

A major new feature at The UK Concrete Show 2026, the Live Demo Zone spans the back right hand corner of the show floor. Combining physical demos with 10-minute tech talks this curated programme is scheduled to take place between sessions in the **Concrete Connect Seminar Theatre**.

This brand-new area will host **two live demonstration sessions each day from 11:45 and 13:35**, giving visitors the chance to see leading products, technologies and techniques in action – up close and in context.

It's about more than just watching – it's about understanding how the products work, what makes them different, and whether they're the right fit – all in real time.

How does it perform under pressure? What does it take to use on-site? Will it be more productive, sustainable and cost-effective?

And you'll be able to try them out for yourself!

DEWALT

DeWalt will showcase its POWERSHIFT™ cordless range, engineered for heavy-duty, high-demand applications where power, runtime, and mobility need to align. Demos will highlight productivity, durability, and real-world performance gains in delivering a smooth and level concrete finish. Discover the difference yourself by giving it a go.

Best-Chem

Best-Chem will demonstrate CreteAway+, its specialist concrete remover designed to break down hardened residues quickly and safely. Visitors will see how the product lifts build-up without aggressive scraping or harsh acids, helping extend equipment life and reduce cleaning downtime.

YB Fixings will be demonstrating the MAX Rebar Tying Tools range, including the RB443T, RB611T, RB823T and RB401T-E, alongside their battery-powered and pneumatic rebar cutters. Discover how MAX's fast, consistent tying and cutting solutions support safer, more efficient reinforced concrete work. You'll also be able to get hands-on with the latest models.

What if your batching process could continuously improve itself? This 10-minute Tech Talk, explores how Command Alkon's Batch AI is helping producers fine-tune weigh-up control, reduce variability, and minimize unnecessary material use. See what intelligent concrete production looks like in practice.

MANTIS ULV®

Concrete Wetcast Machinery will present the Mantis Bema 1000, a precision handheld ULV spraying system designed for controlled, uniform application of release agents and surface treatments. The demo will highlight its fine-mist atomisation, reduced overspray, and suitability for wetcast mould preparation. You'll be able to try it out for yourself.

CLOUDCYCLE

Find out more about Cloud Cycle's real-time in-transit monitoring for ready-mix concrete producers. The system transforms every truck into a mobile quality control lab—tracking slump, temperature, and water addition for every load. With automated status tracking, cycle time analysis, and digital pour records, producers get total visibility from batch to pour.

See the TJEP Compact Tier 40 in action. This compact rebar tying tool delivers fast, consistent reinforcement fixing using a single 1.3 mm wire to create low-profile, tail-free knots, helping to keep the wire fully embedded within the concrete and reduce the risk of corrosion. Its pull-back tying technique ensures secure ties with precise wire usage, maximizing efficiency and increasing ties per coil.

This demo will prove how easy it is to use the Moxie Shield concrete-enhancing products for waterproofing and vapour-proofing concrete and masonry structures, offering practical guidance including finish and setting times. Designed to limit moisture ingress and vapour transmission, Moxie Shield reduce issues such as efflorescence and long-term material deterioration.

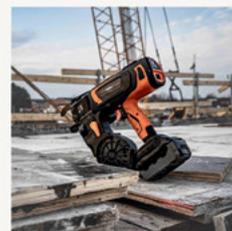

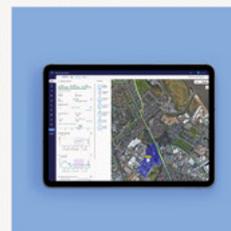

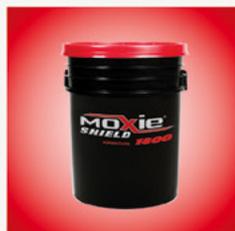

TechQuip will demonstrate a fully battery-powered walk behind power trowel, including live start-up and operation on a demonstration board. The session will showcase its smooth control, quick-change 11 kg battery system, rapid charging, app-based battery monitoring, and zero-emission performance, along with its benefits for UK construction sites.

Exhibitors A-Z

2D Nano Ltd

E34

2D Nano is an Imperial College spin-out company delivering advanced materials innovation. It commercialises advanced 2D materials such as graphene using proprietary production technology. The company is transforming building materials, primarily concrete, through its 2D materials research and technologies, creating more profitable and sustainable products. A key example of its capabilities is a reduction of cement in concrete by up to ~25%. Its established industrial-scale production facility, located in London, delivers sustainable and customisable high-performance materials. 28 Tudor Street, London EC4Y 0AY 2dnano.uk

A2 Engineering Ltd

M3

A2 Engineering Ltd specialises in the manufacture of high-quality replacement parts for volumetric concrete mixers, along with hydraulic system repair, precision CNC machining, and custom-component manufacturing.

With extensive experience supporting the concrete and construction industries, the company provides reliable, cost-effective solutions to keep equipment operating efficiently and minimise downtime. Its in-house machining and repair capabilities allows the company to respond quickly to customer requirements, whether supplying replacement components, refurbishing hydraulic systems, or producing precision-engineered parts to specification.

Services include: the manufacture of replacement

parts for volumetric concrete mixers; hydraulic system repair and maintenance; precision CNC machining; custom fabrication and component manufacture; and engineering support for industrial and construction equipment.

At this year's show, A2 Engineering will be demonstrating key equipment and components, showcasing its engineering capability and commitment to safety, quality, and reliability. Unit 11B - Station Yard, Wallage Lane, Rowfant, Crawley RH10 4NF 07788 289776 a2engineering.co.uk

AC Cable Solutions Ltd

E56

AC Cable Solutions, in partnership with Kraso GmbH, manufactures specialist water-, gas- and fire-resistant sealing solutions. The company specialises in duct-sealing systems, concrete waterbars, joint tapes and crack-inducing systems, helping ensure structures remain permanently watertight. Its solutions support both new concrete construction and retrofit applications. From cast-in waterbar and joint-sealing systems to crack-inducing profiles and waterproof joint tapes, the company helps control water ingress, manage structural movement and ensure predictable crack formation.

AC Cable Solutions also supports sealing of cables and pipes through ducted networks and core-drilled openings, protecting assets where services penetrate concrete structures. With UK manufacturing and the engineering strength of Kraso, the company combines technical

expertise with fast and reliable supply, helping contractors and asset owners keep projects moving while protecting critical infrastructure.

Adomast Manufacturing Ltd

H50

Adomast Manufacturing has a first-class reputation for manufacturing and supplying high-performance construction chemicals. These include a wide variety of chemically-active formwork release agents suitable for every type of formwork and concrete.

The company has an extensive range of concrete-curing agents, surface sealers, cementitious,

A range of spare parts from A2 Engineering

resin-based concrete repair compounds, concrete admixtures, water-proofing technology and cleaning/protective products and compounds.

Adomast manufactures all construction chemicals at its factory near Barnsley, allowing the company to offer a bespoke manufacturing service. Stock is held on the majority of the product range with a next-day delivery service to over 90% of the UK. The company also offers technical advice and service and can help with mix designs, product selection and application.

Advanced Carbons Council

E20

The Advanced Carbons Council (ACC) is a global trade association that supports the production, adoption and use of engineered advanced carbons. Its mission is to connect and facilitate the cross-sector fertilisation of ideas, applications and business for all advanced materials producers and users.

Delivered by the same team that has grown and developed The Graphene Council over the past 12 years to become a global community of more than 40,000 materials professionals, the ACC focuses on standards, quality, safety, education, sustainability, advocacy, verification, testing and outreach to connect users with qualified supply chain partners.

AES Fleet / Bridgestone Webfleet

E50

AES Fleet will showcase MANTIS's connected camera solutions. Live

Webfleet is an advanced telematics and fleet-management system available from AES Fleet

demonstrations will highlight how real-time footage, AI insights and an integrated evidence centre are helping construction fleets improve safety, protect drivers and manage incidents and risk with confidence.

The company is also a premium reseller of Webfleet, offering advanced telematics and fleet-management systems, including trailer solutions, TPMS and Laden Brake Test technology to support performance and compliance in demanding site environments.

Completing its offering is FleetCheck, providing electronic vehicle and driver compliance management to ensure MOTs, servicing, licence checks and inspections are never missed.

AES Fleet combines proven technology with decades of experience and fully qualified, in-house engineers — delivering reliable support for fleets of all sizes.

Bay-Lynx Manufacturing UK Inc Ltd A10, N1

Bay-Lynx is a family-run business supplying volumetric and concrete mixing equipment to operators across the UK. Best known for the Titan volumetric mixer range, including the Titan Screed Mixer, Bay-Lynx designs machines that give operators control, flexibility, and consistent on-site production. Built using high-quality materials such as Hardox steel, Titan mixers are engineered for durability, accuracy, and long service life.

Alongside its volumetric offering, Bay-Lynx also supplies and supports the Frumecar drum mixer range, providing customers with an alternative solution for traditional ready-mix delivery and fleet expansion. This allows Bay-Lynx to support a wider range of businesses and operating models within the concrete industry.

With locations in the north and south of the UK, Bay-Lynx offers nationwide sales, service, parts, and engineering support.

BDS Market Intelligence E42

Established in 1989, BDS Marketing Research (QMJ) Ltd is the leading independent marketing and market research consultancy specialising in the heavy building materials and waste sectors.

The work of BDS is divided into three key areas, Planning, Reporting and Consultancy.

Planning – BDS monitor and report on all planning applications across Great Britain, Northern Ireland and Republic of Ireland, identifying and reporting on planning applications that have been submitted, consented, withdrawn or refused within many industry sectors.

Reporting – the company publishes a portfolio of publicly-available industry reports providing estimated volumes and market shares across key markets. These include aggregates (primary and recycled), asphalt, ready-mixed concrete, concrete products and cement. In addition, it publishes individual specialist surveys, sector reviews and analysis on a periodic basis.

Consultancy - BDS undertakes bespoke research projects for individual clients on a confidential basis. These can include commercial due diligence, analysis of markets, prices and competitors, new product development and other market research.

Beton Machinery G30

The company was formed in 1979 with the sole purpose of giving the precast concrete industry in the UK and Republic of Ireland the opportunity to obtain information, service and machinery all from

one supplier. Its portfolio includes some of the leading European manufacturers of machinery to batch, mix, press, vibrate, rack and cure concrete products.

As a leading supplier of equipment and services to the concrete industry, the company delivers a spare parts service, providing necessary prices and delivery times. It also offers service and maintenance. All the companies it represents have fully trained and qualified English-speaking technicians for both routine service and other maintenance requirements. Trackwork and rail services are also provided with fully trained UK-based engineers, for the specialist installation of new and replacement trackwork. Beton partner with its sister company Eldercourt Ltd to offer a full range of European- and UK-specification flat-bottom and crane rail, along with a range of associated items. British Aggregates Association
E27

The British Aggregates Association (BAA) is the trade body representing the UK's independent quarrying and aggregates sector. It works on behalf of members to promote high standards across health and safety, environmental management, compliance and sustainability, while providing a strong and credible voice to government, regulators and stakeholders. Through technical support, policy engagement and practical guidance, the BAA helps members navigate regulatory change and operate responsibly in a rapidly evolving industry.

A key part of its work is championing the role of aggregates, soils, stones and recycled materials in supporting

construction, infrastructure and the circular economy. It also actively encourages continuous improvement through initiatives such as the Assessment of Operating Standards (AOS) Scheme and industry-led health and safety guidance.

Dunkirk, Nr Chester CH1 6LT
closeasseffinance.co.uk

Cloud Cycle Ltd D54

Cloud Cycle provides real-time visibility into every concrete delivery, helping ready-mix concrete producers make informed decisions before a problem reaches the site. The system captures live data from every load, including slump behaviour, temperature, drum activity, water addition, waiting time, and discharge conditions. This data is instantly available to operations and quality teams, creating a single, objective view of what is happening inside the truck, not a report after the event. For ready-mix producers, this means tighter quality control, fewer rejected loads, reduced waste, and consistency across plants, shifts, and drivers, saving time and money and making operations more efficient and ensuring quality on every delivery. Issues are identified early, unnecessary cement use is reduced, and performance is managed proactively rather than reactively.

For contractors and project teams, Cloud Cycle provides confidence and traceability. Delivery conditions are visible, delays and handling effects are recorded, and quality discussions are grounded in facts rather than opinion.

Cloud Cycle is designed to

support experienced teams, not replace them. Concrete professionals already know where problems tend to start, the system makes those risks visible, consistently, across every load.

Cloud Cycle will be featured in the New Products Hub and in the Demo Zone, demonstrating how live delivery data can be used to improve concrete quality, reduce waste, and cut embodied CO₂, in real time.

Concrete Services & Supplies

G20

CSS, a family-run business, has been providing the hire and sale of concrete flooring equipment in the UK and Ireland for more than 10 years.

On the stand will be an Ekin Conscreed E1800 and E2400, along with Conpour and Contop, from UK manufacturers Ekin Engineering. Also on display will be a selection from the CSS walk-behind range, Husqvarna power trowels, Hipertrowel polishing system and Soff-Cut saws along with a full range of tools.

Concrete Society

E24

The Concrete Society is an independent membership organisation that exists to promote knowledge in connection with the manufacture, use and application of concrete.

The Concrete Society was formed in 1966 to address the

increasing need for a single organisation embracing all those interested in concrete whether as designers, contractors, researchers, and suppliers of materials and services.

These founding principles hold true today, it is how it delivers this and meet the needs of its members and the built environment now and in the future that is changing.

Concrete Technology Ltd

C10

Concrete Technology provides machinery solutions for new factory installations and efficient updates to the precast concrete product industry, providing solutions for all stages of manufacture, from the production of high-quality concrete to bespoke handling and packaging of finished products. The company works in partnership with customers, to meet their needs and ensure every solution is efficient, cost-effective and confidential.

The company represents: Automacad, Humarbo, KBH, Kraft Curing Systems, Ocem, R&W, Rapid International, Rekers, Sonocrete, WASA, and Würschum, 271 Newcastle Road, Nantwich, Cheshire CW5 7ET

Concrete Wetcast Machinery Ltd

B15

Concrete Wetcast Machinery is designed for the efficient production of high-quality wetcast concrete products. Suitable for items such as architectural panels, precast units, steps and bespoke

components, the equipment is built for reliable, everyday use in busy manufacturing environments. The systems typically include mould-handling equipment, mould oil dosing, concrete dosing and vibration tables to help achieve consistent compaction and a good surface finish. Simple controls and practical layouts make operation straightforward, while flexible set-ups allow the machinery to fit into both new and existing production lines. Built to meet UK safety and environmental standards, wetcast machinery supports steady output with reduced waste and improved efficiency.

Concretene

J54

Concretene is positioned to lead graphene in construction – taking nanomaterial science out of niche applications and turning it into a core-enabling technology for global construction.

Its suite of products is centred on a graphene-based admixture, engineered to enhance the performance and sustainability of cementitious materials.

Concretene can be precisely optimised for grouts, mortars and concrete, using a specific blend of graphene materials tailored to each application. This customisation enables 15-30% performance enhancement, allowing producers to reduce cement content and embodied carbon while maintaining full design strength.

Concretene is cost-neutral at scale, the price of the product being equal to the cost of the cement removed from the mix. This allows end-users to reduce emissions affordably with a solution for low-carbon concrete that commands no green premium.

Conquip Engineering Group

B21

Founded in the UK in 2003, Conquip has grown to become a large, global brand, providing a wide range of products and services from concrete pouring solutions, concrete washout, plant attachments, lifting equipment, site set-up and storage, to ground engineering, temporary works design, bulk excavation and more.

Its mission is to give an extraordinary service to the

construction industry with a focus on the infrastructure, groundworks and civils, housebuilders, plant hire and RC frame sectors. The company aim to provide customers with the best of its capabilities in design, manufacturing, delivery, service and Conquip Covered after-sales support to ensure customers meet industry standards and maximise operational output.

ConSpare Ltd
C1

ConSpare work with customers to improve concrete batching plants and the production process through high-performance equipment, spare parts and site services. Established in 1978, it has evolved to become a key problem-solving partner across the production process.

At this year's UK Concrete Show, the company will continue to highlight its drive to help make concrete plants and production more sustainable, whether through reducing environmental impact or improving the wellbeing of site staff.

Exhibit highlights include: TEKA THT turbine mixer; mixer wear part displays; Hydronix moisture measurement equipment demonstrations; belt conveyor components; block machine equipment and components.

ConSpare will debut its latest partnership at this year's show with ASSYX DuroBOARD production boards. ASSYX are an innovator and technology leader in the field of production boards. The DuroBOARD combines the operational benefits of wood with the protective properties of polyurethane, providing a high-performance board which helps clients make consistently high-quality concrete products throughout an impressive service-life.

Construx-Weckenmann
C45

Founded in 2003 in Belgium, Construx Group is a leading producer of moulds, machinery and circulation lines for the precast concrete industry.

The group's four brands each deliver its own specialism: Construx Weckenmann supplies tailor-made moulds and automated circulation plants for industrial precast production; Construx On-Site specialises in on-site formwork solutions for civil works and construction projects, and (rental) modular formwork systems; CBE Group is a leader in moulds and carousel systems for precast tunnel segments; and Acimex delivers advanced vacuum-lifting and handling technologies.

Nearly 700 people are employed at its 12 production sites across Belgium, the Netherlands, Germany, Romania, France and China.

Contec Fiber AG
Solutions for Concrete
B34

From microfibres to high-performance macrofibres, complemented by natural ecological fibres, Contec is dedicated to advancing high-

quality concrete solutions, including high-performance concrete (HPC) and ultra-high-performance concrete (UHPC).

Its fibre technologies are engineered to reduce crack formation and, depending on the application, can replace conventional reinforcement steel. Industriepark Vial 2, Domat/Ems, 7013, Switzerland

Controls Testing Equipment Ltd
J41

Established in 1968, Controls Testing Equipment develops and supplies a complete range of testing solutions for cement, concrete and steel reinforcing bars for structural applications. Its systems are designed and manufactured to meet the needs of every laboratory from quality control production to advanced applications for research projects.

The company's comprehensive range of compression testing machines satisfies all EN, ASTM and other national standards. A wide selection of accessories and upgrading options makes its concrete testing solutions flexible and modular allowing each user to expand their testing capabilities easily and as required, from basic quality control to advanced testing. Products are complemented by a wide range of equipment for fresh and hardened concrete testing plus non-destructive testing (NDT).

Coote Engineering D50

Since 1977, Coote Engineering has been supplying cutting-edge solutions to the precast concrete industry. With decades of experience, Coote Engineering is a premier provider of machinery and steel moulds, driving enhanced and efficient production for concrete facilities across the world.

The family-owned company is commitment to quality in both design and manufacturing. Using a blend of 2D and 3D CAD design alongside advanced CNC manufacturing facilities, the company ensures all products, whether from its standard range or

custom designs, meet the highest industry standards. Every piece of equipment bears the CE mark when applicable, underscoring Coote Engineering's dedication to compliance. The company offers an extensive range of standard products along with bespoke designs from its Northern Ireland headquarters.

In 2016, Coote Engineering acquired Finlay Block Making, a company with nearly seven decades of expertise in designing and manufacturing concrete block making machines. This strategic acquisition brought together Coote Engineering's skill and Finlay's legacy.

Cormac Engineering Ltd B14

Cormac Engineering is the UK distributor and technical partner for Frumecar, a leading European manufacturer of high-performance concrete batching plants.

The Frumecar range is engineered to deliver reliable, efficient and consistent concrete production across a wide variety of applications. With outputs from 30m³/h up to 150m³/h, the portfolio includes fixed and mobile batching plants, available in both wet- and dry-batch configurations, to suit site-specific requirements.

Frumecar plants are built using robust, high-quality components and protective coatings to ensure durability, minimal maintenance and long service life. Precision batching, efficient material flow and flexible plant layouts allow producers to maximise uptime and operational efficiency. In 2025, 11 Frumecar batching plants were successfully installed across the

UK, reflecting growing confidence in the performance, reliability and support behind the range.

Cormac Engineering provides full UK support for Frumecar batching plants, including plant design and layout, supply, installation, commissioning, servicing and parts availability.

Euro Accessories Ltd G60

Euro Accessories has supplied accessories and precast lifting items into the UK and Ireland construction market for more than 25 years, with extensive experience in the production and supply of products to install, pour, demould, repair and handle reinforced concrete both on site and in precast concrete production plants.

All materials are sourced, manufactured and supplied under a strict quality-management system in accordance with ISO9001:2015. The company has a dedicated sales team with many years of experience in the industry, along with a purchasing department with in-depth knowledge of the supply chain to obtain the best price and quality balance. It also has in-house technical support providing design assistance and best practice guidance on all its products.

The company operates through four depots: Sandbach, Cheshire; Basingstoke, Hampshire; Armagh, Northern Ireland; and Roosky, Republic of Ireland. Utilising its own multi-vehicle delivery fleet with FORS Gold approval, it can cater for delivery requirements anywhere within the UK and Ireland. It manages and holds a large quantity of stock.

Euro Accessories also offers a range of sales training and professional development seminars and can carry out

on-site testing, product detailing and specification in conjunction with in-house rapid prototype development.

fibro Collect / fibro Intercon D20

fibro Collect UK and fibro Ireland serve as official distributors for fibro Intercon, a Danish manufacturer renowned for fibro Collect, its groundbreaking self-service system for collecting concrete, mortar, screed, and loose aggregates. It is the only self-service solution capable of producing both concrete and mortar seamlessly from the same mixer. This is made possible by its innovative self-cleaning pan mixer with integrated washout water recycling. Additional features include customer-operated hydraulic conveyor belts, a user-friendly touchscreen payment terminal, and the in-built fibro Link cloud-based software system.

The fibro Collect self-serving batching system from fibro Intercon

With installations now in a number of builders' merchants and recycling yards, all over the UK and Ireland, the technology resonates with builders, landscapers and groundworkers, who have transitioned from traditional belle mixers to fibro Collect's mix capabilities for volumes between 0.2-1 m³. Builders initially sceptical of the technology have become advocates, praising the consistent mortar quality and improved labour efficiency.

fibro Collect UK and fibro Ireland collaborate closely with fibro Intercon to drive meaningful change through innovative technology. fibro Intercon specialises in onsite batching solutions and 3D concrete printing. By combining Danish engineering excellence with in-depth UK and Ireland market expertise, the group is positioned at the forefront of construction technology,

demonstrating that environmental responsibility and operational efficiency can advance together.

At this year's Concrete Show, there will be attendees from fibro Intercon, fibro Collect UK and fibro Ireland to talk you through machines designed to suit everything from compact yards to large-scale operations looking to expand with a concrete, mortar, and screed collection system. Visitors to the stand can also see one of the company's state-of-the-art touch-screen terminals. Using a fibro Collect model, there will be mini-walkarounds of the system demonstrating features such as the hydraulic conveyor, automated washing system, automated hopper covers and integrated water recycling.

Hendriks Formwork Solutions

D44

Hendriks provides formwork solutions for prefabricated concrete producers as well as major infrastructure projects, housing and apartment building projects. It delivers high-quality and innovative formwork worldwide for a variety of major precast producers or infrastructure projects, including bridge components and tunnel segments.

Its housing formwork has played a major role in the modernisation of construction in the Netherlands. The formwork can be hired or bought and is equipped with all the essential safety features, ensuring the equipment meets the highest standards for a reliable, safe, and efficient project.

For prefabricated concrete clients, the company provides easy-to-use, durable and safe moulds, from a standard mould to fully automated carousel systems, which allows clients to produce faster, more cost-effectively and to a higher standard. As well as in-house production and engineering, the company's mobile service team provides installation, training and warranty services.

Howden Insurance

E44

Howden is the new name for A-Plan. The company provides insurance services supported by relationships with a panel of specialist and standard insurers, enabling the comparison of multiple policy options on behalf of customers.

Howden offers a personalised approach, working with individuals to understand their specific requirements and arrange insurance cover that reflects those needs, including van insurance.

The team supports customers throughout the policy lifecycle, including purchasing new cover, renewing existing policies, and managing claims.

Humarbo

C10

With more than 50 years' experience, Humarbo Machinery B.V. is a specialist supplier of machines and moulds for the production of both wet-cast and dry-cast products.

Humarbo offers a wide range of products: automatic and semi-automatic mould-filling machines for dry and wet concrete, vibration tables, mould and pallet handlers,

floor dispensing fill-mould machines, as well as bespoke and large-scale moulds and forms.

The range of products that can be manufactured by its machines and moulds includes products for railways, infrastructure, building sector, agriculture and a wide variety of home and garden products.

Impact Test Equipment Ltd

E35

Impact Test Equipment is a leading manufacturer and supplier of laboratory and site testing equipment, catering to a wide range of industries including civil engineering, construction, mining, and aggregates. Clientele includes concrete, cement and asphalt manufacturers, geotechnical laboratories, educational and research institutions, government ministries, engineers, consultants, and resellers.

From moisture content tins to state-of-the-art microprocessor-controlled testing systems, Impact Test Equipment offers a comprehensive range of testing solutions to meet the diverse needs of customers. The company supply test sieves that conform to ISO3310-1, ISO3310-2, and ASTM E11 standards, with UKAS calibration, ensuring accuracy and consistency in particle size analysis.

JCB

K30

JCB is the world's third-largest construction equipment manufacturer and in 2026 is proud to be returning to the UK Concrete Show. With a long history of working with major organisations in the aggregates sector, its products have been developed to withstand the tough demands of concrete-batching and materials-handling applications.

JCB has led the way in wheeled loading shovels for decades and during this time, the machines have continually evolved to deliver the performance, reliability and productivity needed for competitive operation in today's industry. The range of wheeled loading shovels and telescopic machines are built to handle anything and can take on any task with ease. The latest additions are the most powerful, efficient, safest and comfortable machines JCB has ever built.

KBH

C10

KBH manufacture automatic distressing systems, cube building and packing lines (online or offline) for pavers, bricks, and walling and building blocks.

Its systems are fast, accurate and suited to the UK market. KBH has considerable experience in meeting all UK safety and COSHH regulations. It also manufactures curling brushes which, when applied to aged or shot-blasted product, changes the texture to a smooth surface and highlights colours and special aggregates.

Another product is the Colorist coloured concrete blending system which produces a wide range of colour designs creating a natural stone look or brindle effect using either face mix or through mix. The system is designed to be retrofitted to most block machines, requiring only one discharge door from the face-mix mixer.

Lord & James Surface Preparation

B45

Lord & James Surface Preparation is a specialist supplier of professional surface-preparation equipment, serving contractors, hire companies, and industrial users across UK and Europe. Built on practical industry knowledge and a hands-on approach, Lord & James focuses on providing

reliable solutions for real jobsite challenges.

The Lord & James portfolio includes walk-behind and ride-on floor scrapers, concrete grinders, shot blasters, dust-control solutions, and a full range of tooling and accessories. As the European distributor for National Flooring Equipment, and a distributor of Syntec Diamond Tooling and Hyper Grinder equipment, Lord & James offers proven machines designed for demanding environments.

Its equipment is selected for durability, productivity, and ease of use in heavy-duty applications such as flooring removal, concrete preparation, coating removal, and surface profiling. The product range is designed to support both soft-goods and hard-goods removal, with flexible tooling options to suit different substrates and site conditions.

Working closely with hire partners and contractors, Lord & James prioritises product knowledge, training, and aftersales support.

Lubas

C2

Lubas, a leading manufacturer of polyurethane products, boasts an extensive product portfolio.

Its modern manufacturing plant consists of several process lines enabling parallel production in multiple departments. It also has its own polyurethane elastomer foundry staffed by a team of highly skilled and experienced workers.

Lubas high-quality products are used in a wide range of industries. They display high durability, abrasion resistance, resistance to i.a. hydrolysis, seawater, temperature, high dynamic loads, and UV radiation.

Year by year, the company has strengthened its position in the Polish market and expanded into new international markets. Directly or indirectly, it is currently present in 42 countries on six continents. Its products have been used in the rebuilding of the Panama Canal, removing snow from the world's largest airport in New York, and in the operations at the Sierra Gorda copper mine in Chile.

Lucideon D55

Lucideon is a leading materials development and commercialisation organisation providing consultancy and testing to solve complex materials challenges across the construction sector.

Its structural services support the industry with comprehensive testing of building components and full-scale reconstructions to assess structural and durability performance, ensuring products are fit for purpose in demanding real-world conditions. With dedicated structural laboratories and advanced facilities capable of large-scale, standard, and tailored testing programmes, the company provides insight that adds value to client products, materials and construction methods.

The company is also at the forefront of supporting the transition to lower carbon construction through its cement and geopolimer capabilities. Lucideon says it is the only UK facility providing formulation development, assessment, and scalability for geopolimer and

novel cements, enabling clients to move from laboratory concepts to commercially-ready materials. State-of-the-art equipment delivers accredited testing for innovative cement products, including large sample strain and shear testing, high-load testing, and advanced environmental exposure assessment to ensure performance and safety standards are met for next-generation concrete solutions.

Mantis-ulv B15

MANTIS ULV-Sprühgeräte GmbH from Germany manufactures ultra-low-volume (ULV) spraying systems for the precast concrete industry. Under the BEMA brand, modular and hand-held ULV sprayers ensure the precise and efficient application of liquids — from form

release agents before casting to impregnating and protective treatments after casting.

Key benefits include: up to 75% less liquid used, perfect surface finish, cleaner moulds, safer working conditions, and lower environmental impact.

With over 50 years of ULV expertise, MANTIS' systems are trusted worldwide for sustainable, high-quality precast production.

Marferrox B15

Marferrox is a UK supplier of specialist colour pigments for the concrete and building materials industry. The company focuses on high-quality iron oxide-based colourants that help producers achieve rich, consistent, long-lasting colour in precast, ready-mix and architectural concrete products.

Pigments are available in a range of earth-tone shades and are suitable for use throughout the concrete mix, giving permanent integral colour without the need for surface coatings. Products are selected for durability, weather resistance and colour stability, supporting both standard and bespoke concrete colour requirements.

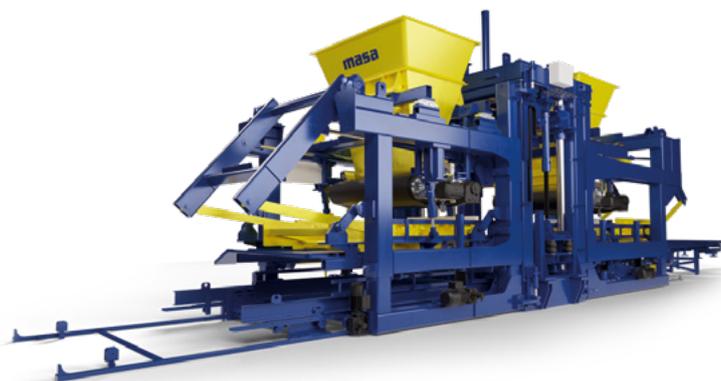

The company works closely with manufacturers to ensure the right pigment choice and dosing guidance to meet production and design goals. All Mars Colour pigments meet or exceed all international standards for the use of colour in cement and lime-based products including European Standard EN12878:2014.

Material Evolution

B32

Material Evolution (Mevo) is enabling the concrete industry to decarbonise at scale - without compromising performance, cost, or constructability.

Its flagship product, MevoCem, is an ultra-low-carbon cement made from industrial byproducts, delivering up to 85% lower CO₂ emissions than traditional Portland cement. Produced using a patented, heat-free alkali-fusion process, MevoCem avoids energy-intensive kilns while meeting the performance demands of real-world concrete applications. Designed for industrial adoption, MevoCem is already being manufactured at scale in the UK. It provides a practical, drop-in pathway for producers and contractors looking to reduce embodied carbon, using familiar production routes and compliant mix designs.

The company also offers MevoXL, which enables rapid, early strength in concretes with up to 95% SCM replacement, unlocking reliable performance, cost-neutral and low-carbon concrete at industrial scale. This makes high-SCM mixes commercially viable across precast and ready-mix applications.

Led by co-founders Dr Liz Gilligan and Sam Clark, Material Evolution has a clear mission: remove one gigaton of CO₂ by 2040. Its R&D hub in Teesside and A1 production facility in Wrexham are already proving that ultra-low-carbon cement can be delivered — at scale, on spec, and on site.

Moxie Shield

H30

Moxie Shield produces integral liquid concrete admixtures designed to control vapour and water migration from within concrete.

Moxie permeability-reducing admixtures are added at the mix stage, modifying the concrete's internal structure as it forms. By disrupting capillary pore development and restricting the

movement of water, vapour, and ions, durability is engineered directly into the matrix rather than applied afterwards.

The result is longer service life in aggressive and moisture-sensitive environments, reduced risk of cracking and corrosion, and fewer moisture-related flooring failures. For projects where concrete must perform for decades beyond handover, Moxie concentrates on controlling internal movement within the concrete itself, reducing reliance on membranes, coatings, and future remedial work.

MudMixer

C5

The MudMixer is a continuous concrete mixer designed to provide a steady, controlled output of cementitious materials without the need for batch mixing. The unit uses an electric drivetrain and a fully adjustable water-input system, allowing operators to regulate moisture levels for materials such as concrete, mortar, stucco mixes and similar products.

Material is fed through the hopper and mixed as it moves along the internal auger, supporting uninterrupted placement and reducing the stop-start workflow associated with conventional drum mixing. The design aims to streamline labour requirements on small- to mid-scale jobs by providing a consistent mix profile and reducing the likelihood of overly wet or dry material.

The MudMixer is intended for contractors seeking a portable, continuous mixing solution suitable for varied site conditions and a broad range of cementitious applications.

Founded in 1978, Numold has nearly 50 years' experience supporting precast concrete manufacturers worldwide.

The company specialises in the design of moulds, materials, and products, developing tooling solutions for a wide range of infrastructure components. These include fence posts, gravel boards, stop-end bungs, and T-beam end caps, manufactured using high-cast polyurethane materials for heavy-duty applications.

Numold designs and produces modern tooling and mould systems dedicated to the precast concrete industry and continues to introduce new products and technologies to support evolving industry requirements.

O.C.O Technology B41

O.C.O Technology is able to valorise thermal residues as construction products. In the UK, it has three commercially operating plants producing carbon-neutral aggregate, which is being supplied to the construction industry as a sustainable construction material replacing virgin aggregate usage. The aggregate is named M-LS. M for Manufactured, and LS for LimeStone.

O.C.O Technology continues to develop new sustainable products. The technology can be applied to a multitude of applications, including the production of bricks, blocks, tiles and slabs, made from waste materials or conventional cementitious materials.

Olmet Italy Srl D53

Founded in 1961, Olmet Italy designs and manufactures advanced machinery and complete plants for precast concrete production. Under the leadership of President Alberto Tedesco, the company has established a strong international presence, with over 1,300 installations across more than 70 countries.

Rooted in Italian engineering excellence, Olmet provides fully automated, highly customised solutions for small-, medium-, and large-scale production, ensuring efficiency, flexibility, and high-quality standards.

In addition to machinery manufacturing, the company supports customers with design services for precast elements across civil, industrial, and infrastructure projects.

Headquartered near Venice, Olmet operates a highly automated manufacturing facility capable of large-scale steel processing and heavy fabrication up to 20 tonnes. The company's success is reinforced by comprehensive after-sales support, including technical assistance, maintenance, and spare parts supply, ensuring long-term operational reliability.

Oscrete
D41

Oscrete is a Bradford-based manufacturer of high-performance construction chemicals, supplying innovative admixture and additive solutions to the ready-mix, precast, fibres, GRC, mortar, powdered-additives, and waterproofing sectors. With an expert technical team and expanded laboratory facilities, Oscrete continues to support producers with advanced testing, mix optimisation, and tailored product development to meet the evolving needs of modern concrete manufacturing.

Following the recent acquisition of PUDLO, Oscrete has further strengthened its position in the waterproofing market, extending its capabilities to offer fully integrated performance solutions across

a wider range of construction applications. This strategic growth enhances Oscrete's ability to support customers across infrastructure, commercial and residential projects with reliable, high-quality technologies.

As a company committed to responsible innovation, Oscrete is proud to have retained its EcoVadis Platinum status, reflecting ongoing dedication to sustainability, transparency, and best-practice operations. Coupled with continuous investment in new product development, Oscrete remains at the forefront of admixture technology, delivering products engineered for durability, efficiency and reduced environmental impact.

**TAKE CONTROL OF
CONCRETE WASTEWATER**

Since 2003 Conquip has provided major built environment and infrastructure projects with innovative equipment solutions that enhance productivity, safety and sustainability.

Wash, recycle, treat and reuse concrete wastewater efficiently with our solutions.

Concrete Washout System

Ideal for larger sites with cranes using Concrete Skips. 2000-litre capacity

- ✓ Wash larger items: concrete skips, pumps, truck chutes, and concrete equipment.
- ✓ Reuse water for further washout or for wet curing.
- ✓ Available for purchase or hire.

Compact Concrete Washout Unit

Perfect for sites with no crane use, where smaller equipment, such as pouring buckets and truck chutes are used. 800-litre capacity

- ✓ Wash from three sides of the unit.
- ✓ Compact, space-saving system, due to its small footprint.
- ✓ Available for purchase or hire.

PUK Services
E41

PUK is an established solutions provider to the concrete industry, delivering high-quality equipment and machinery for semi-dry, wet-cast, and ready-mix concrete production.

Its experienced team supports

customers in selecting the right technological solutions for any project — whether it's a single machine or a complete turnkey plant built to the highest standards. With more than 50 years' experience, it can offer first-class guidance on plant modernisation, including retrofitting, optimisation, expansion, and production conversion, all tailored to specific requirements.

PUK is the sole official UK representative for several international manufacturers, including: Afinitas, Apilion, Bianchi Casseforme, CGM, CP Technology, GECO Recycling, Matrice Art, MCT Italy, Nordimpianti, and Quadra. Through these partnerships, it provides a wide range of products.

It offers a comprehensive after-sales support service, including spare parts supply, service visits, and maintenance assistance.

Rapid International

C10

Rapid International is a long-established manufacturer of products for the concrete, construction and environmental industries. Over the past four decades, the company has designed and manufactured equipment for the manufacture of concrete, and handling and storing its constituent parts: sand, cement, crushed stone, furnace PFA, other ash and other materials. The equipment consists of static and mobile batching plants, pan, planetary and twin-shaft mixers, mixer washout systems, and silos. The latest addition to Rapid's portfolio is the TransBatch series of super-mobile site-batching plants. 271 Newcastle Road, Nantwich, Cheshire CW5 7ET 01270 666549 concretetech.co.uk

Ratec GmbH

J51

Ratec is a leading provider of magnetic formwork technology and mould solutions for precast concrete production.

Its 3D mould portfolio provides smart forming solutions for modular construction projects, transformer compact stations, bathroom pods, elevator shafts

and other room units. They are designed for the long-term efficient and flexibly adaptable production of precast concrete room modules. Upcrete technology with battery moulds and a concrete pump station completes the product range and is designed for use in projects with very high surface quality requirements.

Ratec is a family-run business and part of the Reymann group of companies. Together with Reymann Technik, the engineering office for planning and realisation of precast concrete production plants, its worldwide distribution network provides end-to-end solutions, with the objective to make production more efficient, raise quality and help customers navigate and solve current and future challenges.

Re-Flow Field Management

E55

Re-flow provides operations management software for UK infrastructure including construction, civil engineering, and highways.

The software is built for the realities of modern sites – capturing data, evidencing work,

and connecting site teams to the office in real time. It does this through an intuitive app for use on site (Android/iOS), and a feature-rich dashboard for the office. By addressing niche industry pain points across each stage of delivery (from pre-tender visits and job management to billing), Re-flow offers a practical route to modernisation by keeping pace with change through ongoing updates, streamlining and improving daily operations, strengthening audit trails, and helping to avoid rework.

Schnell Spa

C34

Schnell develops advanced, fully integrated solutions for the automated production of reinforcement for precast concrete applications. The precast division focuses on high-precision equipment for the manufacturing of special reinforcement meshes, customised lattice girders and engineered reinforcement elements, ensuring dimensional accuracy, repeatability and optimised material usage. Through seamless integration between design software and production lines, Schnell systems allow automated data transfer, reducing manual intervention, minimising errors and enhancing process reliability. The result is a streamlined production workflow with improved traceability, consistent quality standards and increased

operational efficiency. Designed for modern precast plants requiring flexibility and high output, Schnell Precast technologies combine mechanical robustness, digital integration and smart automation to support industrial-scale reinforcement production with maximum performance and control.

Structural Concrete Alliance

E22
The Structural Concrete Alliance brings together the Concrete Repair Association (CRA), Corrosion Prevention Association (CPA) and Sprayed Concrete Association (SCA) to provide a single co-ordinated voice, and source of reference for the structural concrete refurbishment and repair industry.

The Structural Concrete Alliance provides authoritative guidance on asset protection and repair: the repair, refurbishment and renovation of concrete; cathodic protection of steel and concrete structures; and sprayed concrete technology and application techniques.

The Alliance represents over 100 companies drawn nationally from contractors, manufacturers, distributors, consultants, test houses and equipment suppliers. It offers a single point of contact for major clients and a definitive source of information and advice for all involved in the repair, refurbishment and management of concrete infrastructure and the protection from corrosion of a wide range of structures.

Structural Repairs E51

Structural Repairs specialises in identifying and resolving complex concrete and structural problems, particularly where defects are hidden, access is difficult, or failure would be high risk. It combines advanced non-destructive testing and structural scanning with targeted repair and strengthening solutions, to reveal what's really happening inside structures before committing to repair.

Operating in-house UKAS-accredited testing and specialist assessment facilities, enables it to validate materials, performance and repair strategies rather than relying solely on third-party assumptions.

It also designs and manufactures proprietary repairs, reinforcement and encapsulation systems in-house, giving full control over quality, suitability and performance — particularly for demanding environments such as marine, coastal, transport and live operational assets. Work spans car parks, bridges, rail and transport infrastructure, marine and coastal structures, historic buildings and complex concrete assets, where durability, safety and minimal disruption are critical.

Services include structural scanning for hidden defects, concrete repair, resin injection, waterproofing, crack and joint repair, and carbon fibre strengthening, with a focus on addressing root causes, extending asset life, and avoiding unnecessary demolition or replacement.

Superior Forming Solutions Ltd C53

The Super-Form formwork system comprises two products — Super-Form Bracket and Super-Form Road Form.

Super-Form Bracket is a hand-fit, lightweight bracket formwork system that can form almost any shape or size and cast straight, radius, beams, slabs, walls, sheet pile capping beams etc. Its three heights and base sizes allows a wide range of combinations, allowing pours from 400mm to over 2m and can fit in spaces as narrow as 90mm. The systems folds flat for easy transport and storage.

Super-Form Road Form can accommodate hand rails or slab edge systems to allow it to be used on high-rise slab edges. It comes in 1.2m, 2.4m and 3m lengths; 100mm, 150mm, 200mm, 250mm and 350mm heights; with corner and joining accessories.

The Concrete Centre E26

The Concrete Centre provides material, design and construction guidance. Its aim is to enable all those involved in the design, use and performance of concrete to realise its structural, aesthetic and sustainability potential.

The Concrete Centre provides published guidance, seminars, courses, online resources and industry research to the design community.
First Floor, 297 Euston Road, London NW1 3AD
concretecentre.com

The UK Concrete Show A30

As the only exhibition dedicated to the concrete industry, the UK Concrete Show provides an unrivalled platform for exhibitors to meet key decision makers from across the concrete supply chain. Seminar programmes covering the main themes driving the sector take place in the Concrete Connect seminar theatre within the exhibition hall.

The UK Concrete Show takes place annually and returns to the NEC Birmingham on 17 & 18 March 2027.

Thor Atkinson Steel Fabrications Ltd J44

Thor Atkinson Steel Fabrications provides comprehensive steel fabrication and engineering services tailored specifically to the needs of the concrete sector. Capabilities include the design, fabrication, supply, and installation of aggregate bins, hoppers, conveyor systems, chutes, stock bays, access platforms, and safety guarding. Supported by an in-house design team and skilled fabricators, the company works closely with concrete producers to develop bespoke solutions.

Its specialist demolition division, N&R Contractors, undertakes the safe dismantling and removal of redundant concrete plant.

Universal Matter B51

Universal Matter is an advanced materials company focused on enhancing the performance and sustainability of cement and concrete through graphene-based technologies. Headquartered in Burlington, Ontario, Canada, with operations in the UK and North America, the company

develops scalable solutions for the construction and infrastructure sectors.

At the core of Universal Matter's innovation platform is its patented Flash Joule Heating technology, a breakthrough process that converts a wide range of carbon feedstocks, including waste carbon materials, into high-quality graphene and advanced nanomaterials. This low-energy manufacturing route produces highly conductive and mechanically robust graphene while supporting circular economy and decarbonisation objectives.

Universal Matter's primary focus is the development of graphene-enabled liquid admixtures and additives for cement and concrete. Through its Genable concrete product platform, the company delivers improvements in early and later age strength, durability and crack resistance, while enabling reductions in cement content and embodied carbon. These solutions support

producers, contractors and asset owners in meeting increasingly demanding performance and sustainability requirements.

With research, production and commercial teams in Canada, the US and UK, Universal Matter works closely with ready-mix producers, precast manufacturers and material suppliers to accelerate the adoption of graphene at industrial scale. The company's mission is to enable next-generation low-carbon concrete through practical, commercially-viable advanced materials. Innovation Centre, Wilton Site, Redcar, North Yorkshire TS10 4RF

Utranazz K40

For over 55 years, concrete equipment specialists Utranazz, has been supplying the UK's largest range of new and used concrete equipment for sale or hire.

Utranazz is a family-run and owned business that has grown organically over decades, combining steady expansion with a commitment to the values on which the company was founded.

Today, it holds exclusive UK dealership rights for 12 leading concrete equipment manufacturers, supplying innovative and reliable solutions to the concrete industry.

In 2023, Utranazz reached a major milestone with the relocation to a new, purpose-built 25-acre headquarters in Piddington, Bicester, further strengthening its ability to support customers nationwide.

Utranazz will be showcasing the IMER 9m³ Superlight truck mixer, the Turbosol TB40 City Pump concrete-line pump, and Blue Molds concrete block moulds. Utranazz House, Cowpastures Farm, Piddington, Oxfordshire OX25 1AE

Volumech Ltd K10, N8, N10, N11

Volumech designs and supplies technologically advanced volumetric concrete mixers that provide precise control over concrete production. These systems allow operators to manage scheduling, material usage, and mix quality directly on site, offering an alternative to traditional barrel mixers.

As part of Cemen Tech, Volumech supports a range of mobile and volumetric concrete mixing solutions used across the construction industry. The

Volumech will show the Cemen Tech MS2 volumetric concrete mixer

equipment is designed to improve accuracy, efficiency, and flexibility, helping contractors respond to changing project requirements whilst maintaining consistent concrete quality.

WASA Pallets

C10

Constant improvements to the Uniplast board have led to Wasa Uniplast Ultra. Comprising microfibres in a homogenous solid plastic provides even greater stability without the need for profiles and a reduction in board thickness. Demonstrably high and uniform vibration transmission ensures faster and better compaction. Designed for short cycle times under the most demanding conditions, the Wasa Uniplast Ultra boasts the highest performance ratings the company has ever offered.

Wasa also manufactures wet-cast moulds made of high-quality polyurethane to client's own design and specification, either singly or composite (several units in one large mould). The Wasa carrier system is designed to ensure zero warp and high stability.

Concrete Technology Ltd represents WASA Pallets in the UK. 271 Newcastle Road, Nantwich, Cheshire, CW5 7ET
01270 666549
concretetech.co.uk

WASA Wetcast

C10

WASA Wetcast manufactures high-quality polyurethane and silicone moulds. Its range includes custom-made and standardised large- and small-size moulds of high stability and mechanical strength.

Concrete Technology Ltd represents WASA Wetcast in the UK. 271 Newcastle Road, Nantwich, Cheshire CW5 7ET

Wotblock

A50

Wotblock provides interlocking block and decorative walling solutions. With over 50 years' experience, it designs, manufactures, and supplies modular precast systems for retaining walls, freestanding structures, garden landscaping, and bespoke projects.

The company works with contractors and project owners to either supply products or provide a complete service from wall

design through to delivery and installation. Combining advanced engineering and high-quality materials, Wotblock can deliver durable, efficient, and visually striking wall solutions for a wide range of applications.

Xlink Fiber

C14

XLINK is a high-performance synthetic fibre engineered to enhance concrete applications. Manufactured through extrusion, embossing, and precision cutting with the latest technology machines, it is tailored to meet diverse concrete requirements. Designed for ready-mixed, precast, and sprayed concrete, XLINK is suitable for both above-ground and underground applications. Its embossing process enhances the fibre-to-concrete bond, significantly boosting the residual flexural strength of the concrete.

YB Fixings Ltd

E30

For more than four decades, YB Fixings Ltd has been a trusted force in the construction industry, supplying innovative fastening solutions that keep projects moving efficiently, safely, and with absolute reliability. It is the only official UK and Ireland distributor for MAX, a leader in rebar tying technology.

With long standing relationships with MAX and Beck Fastenings, YB Fixings supplies a comprehensive range of fastening solutions for every stage of construction, from groundworks to roofing, timber frame to light steel framing.

The company also provides: tool demonstrations and on-site support, technical advice tailored to specific applications, guidance on choosing the right fastening solution, as well as aftersales support.

BDS
Market
Intelligence

BDS is the leading marketing and research consultancy in the minerals, heavy building materials and waste industries with over three decades of experience of your markets.

We are able to meet all of your market intelligence needs.

For more information contact:

Rachel Brooks – Research Director
t. 0115 945 4363
e. rachel.brooks@bdsmarketing.co.uk

BDS Marketing Research (QMJ) Ltd
7 Regent Street
Nottingham
NG1 5BS

- Sectors covered - aggregates, ready mixed concrete, asphalt, cement, waste management and the full range of concrete products
- Published reports include
 - GB market surveys on each sector showing market size, trends, companies and prospects
 - Annual reports listing outputs and company market shares
 - Planning reports showing the latest planning developments in each sector

If your needs are not met by our published reports we will deliver a tailored research project to you. Over 50 surveys are commissioned each year by individual clients including some or all of the following:

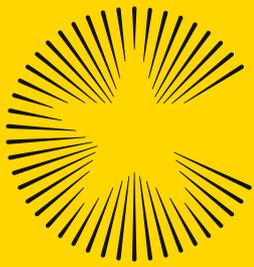

- Assessing market size and prospects for a new investment
- Business and product development
- Acquisition appraisals and commercial due diligence
- Analysis of companies, markets and prices
- Market research

Concrete Society Awards 2025

The Concrete Society Awards celebrates excellence in the use of concrete. The shortlisted projects are carefully considered in person by the judges and the winning projects are announced at the Society's flagship annual event, the Concrete Society Awards Dinner. Below are details of the 2025 winners.

Nominations are now open for the 58th Concrete Society Awards - www.concrete-awards.org.uk

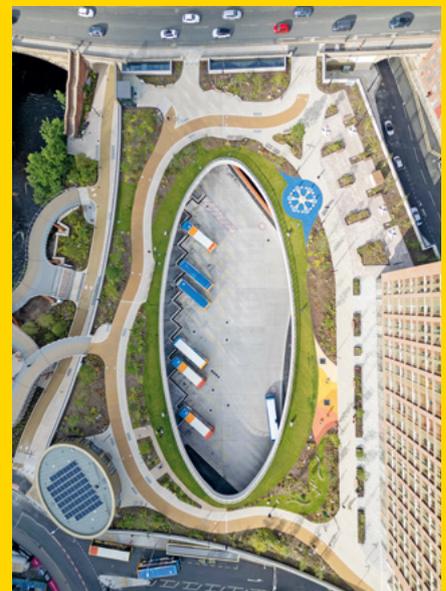

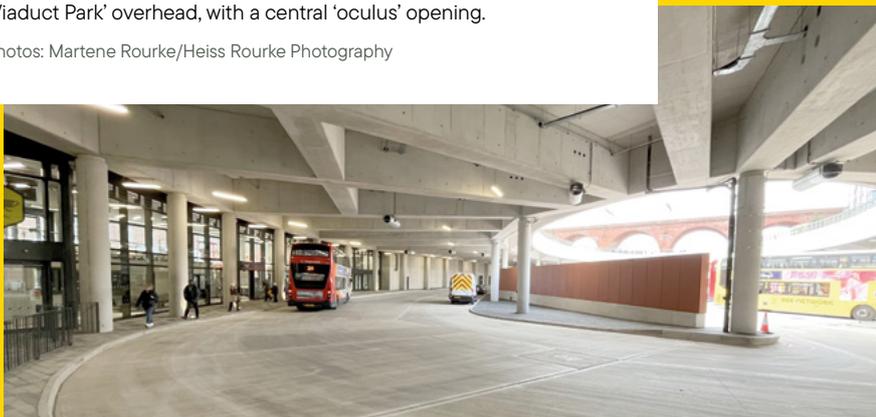

Overall Winner

Stockport Interchange

The Stockport Interchange is an important project for the regeneration of Stockport. The interchange benefits the local community by providing an active travel hub and gateway to Stockport Town Centre. Curvature and exposed concrete are used to create a feeling of fluidity and openness, as long-span reinforced concrete beams house the bus station underneath and support 'Viaduct Park' overhead, with a central 'oculus' opening.

Photos: Martene Rourke/Heiss Rourke Photography

Highly Commended

UCL East Marshgate, London

Marshgate's sculptural architectural form and richly textured surfaces create a bold identity that honours the site's industrial heritage. Internally, the flexible exposed concrete chassis provides diverse spaces purposefully designed to foster interdisciplinary collaboration and ground-breaking research.

Photo: Hufton+Crow

19-35 Baker Street, London

The 19-35 Baker Street redevelopment used precast concrete for columns, core walls, lattice slabs and cladding panels, ensuring a high-quality finish, including meticulous panelisation, bespoke shutters and uniform colour across precast shells. Enhanced architectural aesthetics were achieved through the use of precast and post-tensioned slabs.

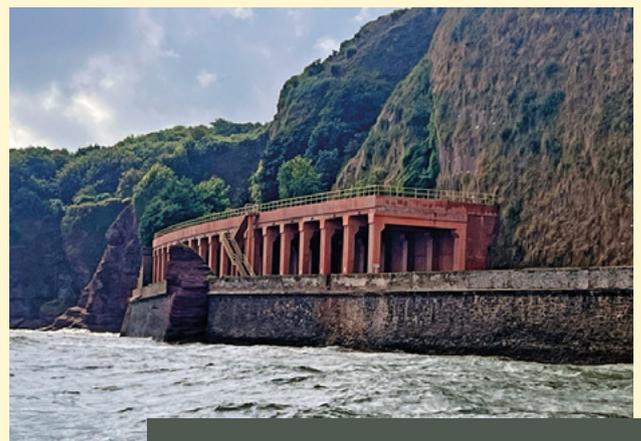

Gull Wing Bridge, Lowestoft

The Gull Wing Bridge spans 350m across Lake Lothing, Lowestoft. Its centrepiece is a 38.5m rolling bascule bridge, the world's largest of its type, which required a meticulously balanced centre of gravity for operation. The design concept could only be realised by developing a heavyweight concrete, overcoming numerous technical and practical challenges.

Llyn Celyn PMF Flood Conveyance Scheme, North Wales

Llyn Celyn is the largest reservoir by volume in Wales, with a capacity of 81 million cubic metres. The £45 million reservoir safety scheme is designed to protect the dam and communities along the River Dee, in the event of an extreme flood. The project features a new auxiliary spillway, including a culvert beneath the access road and precast concrete tipping gates.

Parson's Tunnel, Holcombe

This project provides resilience to coastal hazards such as rockfalls and landslides, and protects the iconic coastal railway between Exeter and Newton Abbot. The design, using precast concrete, coloured in response to the local sandstone, also protects rail passengers' seaward view.

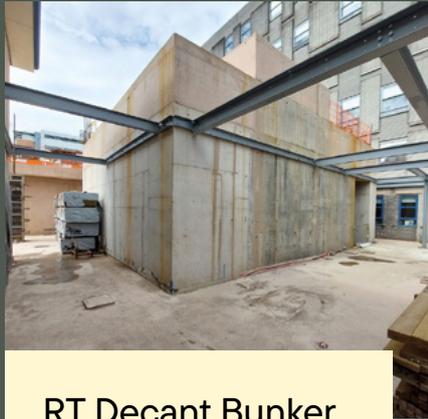

Photo: Network Rail

Plot 9A First Street, Manchester

Plot 9A, a nine-storey commercial building situated on First Street, Manchester, was recently completed for Ask Real Estate. The use of visual, coloured precast concrete in this project has enabled the execution of intricate patterns, a range of finishes and the unusual geometry of the façade.

Photo: Paul Karalius

RT Decant Bunker and HDR Facility, University Hospital Plymouth

This hospital oncology unit extension is situated within a former courtyard car park. It consists of a two-storey reinforced concrete frame, a steel-framed third storey and single-storey steel sections. Features include a concrete medical linear accelerator and high-dose-rate brachytherapy (HDR) bunkers, recovery rooms and an open-plan office for treatment planning.

Shard Place, London

The Shard Place development features hybrid concrete and steel construction, elevating the building above the piazza. The stepped profile preserves The Shard's silhouette while accommodating 176 luxury apartments on a highly constrained site. Exposed concrete columns and GRC façades highlight the beauty of this amazingly versatile material.

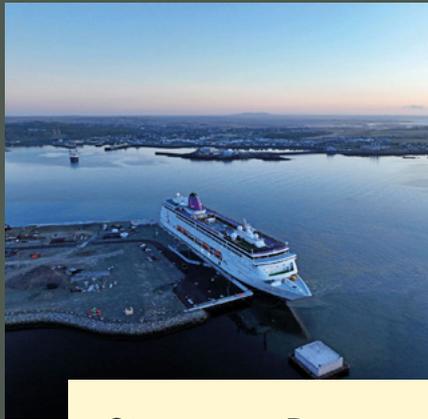

Photo: REM

Inventa, Oxford

Inventa sees the conversion of an existing retail warehouse into a research and development scheme, offering laboratory and office spaces. The provision of new spaces is facilitated by the introduction of a concrete front façade, a concrete mezzanine slab and a rear extension.

Photo: Richard Fraser

Stornoway Deep Water Terminal, Isle of Lewis

The primary objective of this project was to create a new deep water facility for Stornoway Port capable of accommodating a range of large vessels, including cruise ships, a dedicated freight ferry and large cargo vessels.

The Paper Exchange, Belfast

The Paper Exchange is a city-centre, 11-storey, Grade A office building in Belfast. The frontage onto Chichester Street is a reinforced concrete frame and the central core lifts and stairs were constructed using jumpform construction.

Photo: Wirefox

Concrete Society Awards 2026

Do you have a project that shows excellence in the use of concrete?

Nominations are now open for this year's Awards

Prestige and Recognition
Earn national exposure and industry-wide recognition for exceptional work.

Inspire the Industry
Shortlisted projects are renowned as a showcase for the sheer versatility of concrete and are added to our historical roll call.

Celebrate Innovation
Excellence in concrete development and execution, engineering conception and capability.

Strengthen Client Relationships
Projects shortlisted in the Awards gain recognition for companies within the whole construction chain.

Enter now
