***prima*SOFT**®  
more than just paper

## ABOUT US

We are a purely Czech family-owned company founded in 1994, follow up on a long tradition of papermaking industry in the Czech Republic. Currently we are one of the largest manufacturers of industrial paper hygiene and napkins in the Czech Republic. Every year we manage to increase our production capacity. We supply customers not only in our country and Slovakia, but we also export to many European countries. Our team currently consists of 65 employees.

## OUR MISSION

To become a major producer of paper products in Central Europe, which offers quality products and has a respected name. We are working to make our brand synonymous with honest products at an affordable price with excellent customer care.

## COMPANY VALUES

### Pride

We bear a name that within 30 years on the market has become a well-established brand for a trader and paper hygiene products producer.

We value the combination of a strong team, stable background and modern technology that allows us to meet our customers' needs perfectly.

### Openness

We are professionals. We are actively interested in the needs and wishes of our customers, business partners, and employees and respond to them. Friendly and open communication helps us to build strong and long-lasting relationships.

### Reliability

The principles of our work are based on politeness, honesty and humility. Credibility is key for us. The joint efforts and diligence of our team turn these words into reality.

### Responsibility

Sustainability is the meaning of existence; it brings hope of a clean and safer life for future generations. This constant commitment to all people and to the planet is the basis of our behaviour, a never-ending inspiration and is reflected in the manufacturing processes and products we bring to market.

## SUSTAINABILITY IS NOT JUST A WORD, IT'S OUR LIFE

Thanks to the increased height of the transported pallets, the reduction of the cores in our products and optimized logistics, we reduce CO<sub>2</sub> emissions

Also, within the premises of our company we take care of noise and CO<sub>2</sub> emissions and the fact that we're succeeding is proved by the satisfied bee colonies on our roof

We produce from 100% pure cellulose coming from certified and approved sources

We regularly work with our team to help plant vegetation and trees

We eliminate waste to a minimum and put it back into the recycling system

We return rainwater from the whole area of our company back to nature not into the sewer system

100% of the packaging we use is recyclable. At least 50% of the plastic packaging we use comes from already recycled materials

We offer a new and design collection of dispensers made entirely from recycled plastics, whose technical design reduces the waste of unused paper hygiene products

# PRODUCT CERTIFICATION

## FOOD CONTACT products certification

we meet the hygiene requirements for products intended to come into contact with food

## FSC (Forest Stewardship Council®)

is a sustainable forest management certification system that guarantees that products come from responsibly managed forests

## ECO LABEL certification

is an official and independent EU certification programme that guides the creation of sustainable solutions based on life cycle assessment and the common goal of reducing the environmental impact of the production or consumption of products

## Environmentally friendly product

is the eco-label of the Czech Republic, which helps consumers to choose environmentally friendly products that support sustainable development

## The Czech Quality National Program

supports high-quality products and services verified by independent organizations. Its goal is to help consumers find trustworthy brands and eliminate those that are not reliable

# WHAT HAS BEEN DONE SUCCESSFULLY IN THE LAST 5 YEARS?

Looking back over the last 5 years, when your company has celebrated its quarter century, what development have you gone through?

The last 5 years have been very successful for our company. In 2019, we started the construction of three warehouses marked as S4, S5 and S6 with a total total area of 3 x 960 m<sup>2</sup>, on greenfield land and with all the infrastructure (sewerage, roadways, public lighting and parking for employees). In 2020, we returned to self-driving cars, we own a division of 3 trucks and 3 jumbo trucks. In 2021, we began construction of a shipping warehouse S3 with an area of 1,800 m<sup>2</sup> with three ramps leading directly to warehouse floor level. And in the same year we completed the preparation for our largest technological investment - a fully automatic robotic AFH roll line, which was completed and put into operation on 30 June 2023. In the years 2021 to 2022 we gradually purchased and improved napkin production line, which is also now fully automatic and has replaced our capacity of 3 older production equipment.

How were you affected by the Covid period, the energy crisis, the war in the Ukraine, or the high inflation rate?

In the period of the covid, business of industrial hygiene almost came to a standstill. After all, the hotels, restaurants, schools, offices and a whole range of other institutions were closed. Our production lines were at a complete shut down and people were mostly at home. The company was receiving state financial assistance for wages, without which

it would have been a lot harder "to breathe". Still, there was a gap in the market, we went back to traditional business, where we supplied the market with disinfection, disposable gloves, Covid testing kits also about 10 000 pieces of equipment for disinfection liquid solution. Last but not least, it was also the huge volumes of sold toilet paper for households. These activities helped us to overcome covid period that way, the company didn't have to go through this difficult time to lose a single employee.

What are your plans for the next 5 years?

We have a lot of new ideas for the next "five years plan", especially in the area of investment. We intend to complete the construction of our complex. We are preparing expansion of the existing H2 and H3 production halls and we are also planning to build a new hall H4 where we want to expand the production of napkins. Finally, we are planning to build new facilities for our colleagues (changing rooms and canteen), a new laboratory and renovate the existing administrative building. In terms of technology, we would like to replace or at least modernize the Z-Z towel production line, which would also significantly increase the production capacity of this product. We are considering to expand our own car transport by two or three vehicles, as well as building a high-volume fully automatic warehouse, which could provide space for one robotic production line. Well, that's about our near future.

# DON'T BE FOOLED, READ THE LABEL CAREFULLY!

Probably, as in all sectors of production and trade, so in ours, there are not only honest producers, although we would all like to be so in the context of equal competition. Many manufacturers and distributors intentionally mislead their customers and the labelling of products is incomplete, incorrect or confusing.

On our label you will find everything you need to weigh or measure the product. Simply so you know what you're getting for your money. We are also ready to provide you with product or technical data sheets with all the detailed parameters.

<p><b>Example of a dishonest/honest product:</b></p> <p><b>TP Jumbo 190</b></p> <p> <b>REJECT</b></p>  <p> any technical information is missing</p>	<p><b>TP Jumbo primaSOFT 190</b></p> <p> <b>ACCEPT</b></p>  <p> product with all necessary technical information</p>
<p><b>Napkins 33x33, 100 ks</b></p> <p> <b>REJECT</b></p>  <p> 100 pcs indicated on the packaging 80 pcs in reality</p>	<p><b>Napkins primaSOFT 33x33, 100 ks</b></p> <p> <b>ACCEPT</b></p>  <p> 100 pcs indicated on the packaging 100 pcs in reality</p>

## How do you easily find out the weight of a product before it's actually weighted?

Ask your supplier for this information:

- dimension (for TP roll length in metres and roll width in metres)
- paper weight
- number of layers

**A simple multiplication gives us the total weight.**

Example:

**Our article 010319, TP Jumbo primaSOFT 190, 120 m roll, width 0,09 m, weight 16g/m<sup>2</sup>, layers 2**

**1** CALCULATION ROLL WEIGHT =  $120 * 0,09 * 16 * 2 = 346 \text{ g}$   
+ core approx 10 g

**If you then come to the same or even better result when weighing the roll, the information on the label corresponds to reality.**

**2** Knowing the weight, width, number of layers and declared grammage (counting the weight without core)

CALCULATION ROLE LENGTH =  $\frac{346}{2 * 16 * 0,09} = 120$

**3** Knowing the weight, length, width and number of layers

CALCULATION OF PAPER WEIGHT PER ROLL =  $\frac{346}{0,09 * 120} = 32 \text{ g/m}^2 \text{ (2x16g/m}^2\text{)}$
