ABOUT LEMNARTIS

„Architecture should speak of its time and place, but yearn for timelessness.”

Frank Gehry

Superior quality, meticulous attention to every detail, and the exclusive look of our products are the pillars upon which we build our reputation and differentiate ourselves in the market. Since 2009, we have been a furniture manufacturing company dedicated to excellence, and throughout this time, we have accumulated the experience, knowledge, and passion that allow us to offer personalized solutions, perfectly tailored to each individual client.

Throughout this journey, we have clearly defined our mission, values, and vision, ensuring they faithfully respond to the needs and expectations of those who choose us. We firmly believe that an authentic collaboration is based on trust, professionalism, and respect for our clients' wishes; therefore, we strive to deliver not just products, but true Premium experiences at every stage of the process.

If you wish to work with a reliable team that transforms your ideas into reality through high-quality furniture and impeccable service, we invite you to visit our Showroom. There, we will have the opportunity to discuss your project in detail and find the best solutions together to bring it to fruition. We look forward to collaborating and bringing an extra touch of elegance and refinement to your space.

WHY LEMNARTIS

Custom furniture is, at its core, an exercise in precision; both in drawing and in installation. The ideal result emerges when aesthetics are supported by solid technical solutions, tested and designed down to the smallest detail.

Our passion for art has always guided us in creating furniture that inspires and brings comfort, whether in your home or your business space. Our name, Lemnartis, reflects this dedication to the art of woodworking, transforming raw materials into unique, original furniture pieces finished with absolute attention to detail.

In addition to crafting premium furniture, we offer complete services including upholstery, integration of decorative metal elements, and the installation of mirrors, glass, doors, stairs, and wall paneling to create complete aesthetic and functional ensembles, perfectly tailored to your needs. We support our partners through personalized technical solutions designed to ensure the desired result is achieved, regardless of the project's complexity.

We are ready to collaborate on any type of project, whether residential or commercial furniture, providing expertise and creativity to bring your ideas to life.

Drawing Theatre

LOCATION: Unirii Square, Iași; ARCHITECTURE: Studio Ossidiana; CURATORS: Anda Zota, Elena Viziteu Ionescu; EXECUTION: LemnArtis; COMPLETED: 2024

Drawing Theatre is an open theater, an occasion for observation, and an invitation to interact with the gravel stage, sculpting delicate drawings onto the mineral surface using specialized tools. The gestures are deeply inspired by the context: the bas-relief details of the "Three Hierarchs" Church, the drawing instruments from traditional agricultural practices, and the spatial dynamics of how Unirii Square is traversed and used. As a complete cycle, after the festival concluded, the pavilion was donated to the "Casa Bună" Association and will be relocated to the courtyard of a future kindergarten dedicated to children from vulnerable communities.

Lemnartis Wins 1st PLACE with a Revolutionary Biophilic Concept

Our award-winning project, a revolutionary coffee table, demonstrates how advanced engineering and artistic vision can meet to redefine premium living room furniture.

Biophilic Design and Engineering Metamorphosis The award-winning coffee table, created in collaboration with Popescu Bianca, impressed the jury with its biophilic design, inspired by the curves and organic movement of nature. What makes this piece truly unique is its opening mechanism. The lid transforms from a flat surface into a cylindrical shape, bending into a curve in a perfect engineering metamorphosis.

This award, received during the BIFE-SIM 2025 event (confirmed and promoted by ARDI - the Romanian Association for Design and Innovation and MOBILA MAGAZINE), represents not only a recognition of design but also of our ability to bring to life prototypes of rare technical complexity.

COLLECTION

ATTENTIVE TO
YOUR NEEDS

We provide you with collections of projects to inspire you, by Lemnartis.

REZIDENTIAL

AND WANTS

Mid-Century Modern House

A quality custom furniture project starts from a plan, not from a catalog. More than an aesthetic choice, it is the result of an integrated process of technical consultancy, selection of the right materials, and precision implementation.

In open-space areas or integrated residential projects, dual-purpose panels—both decorative and functional—are becoming increasingly common. These can include recessed mirrors, upholstery mounted on flexible plywood, perforated metal supports, or even ambient lighting zones, completely hidden within the furniture body.

In kitchens, for example, current solutions favor vertical organization and multifunctional accessories: full-extension pull-out larders, modular internal drawers, organizers with metal slides, and synchronized extractions, transforming apparently limited space into an efficient and easy-to-use ensemble.

Opening systems range from standard soft-close hinges to folding lift-up, bifold, or parallel-lift mechanisms, especially in wall-mounted areas. In commercial spaces or modern office projects, sliding doors with hidden tracking systems are frequently chosen, allowing entire sections to be covered or revealed according to needs.

Apartment N4. The balance between well-defined lines and fine boundaries

AN EMPTY SPACE CAN BE CONSIDERED RAW MATERIAL THAT MUST BE SHAPED THROUGH DESIGN ELEMENTS SUCH AS COLOR, TEXTURE, LIGHT, POSITIONING, AND THE DIMENSIONS OF THE OBJECTS INCLUDED IN THE DESIGN.

A custom furniture project starts with function, but always ends up becoming part of the space's identity. This is why the selection of materials and components is not just an aesthetic choice, but a technical decision with a long-term impact.

To achieve clean, continuous surfaces without handles, push-to-open systems are increasingly implemented in combination with diagonally milled channels or Gola-type profiles hidden behind the fronts. The result is furniture with a minimalist look, yet perfectly functional and easy to maintain.

In modern furniture construction, ultra-resistant composite boards are increasingly used, ideal for areas exposed to moisture or high traffic. High-density boards with an HPL (high-pressure laminate) protective layer are suitable for bathrooms, commercial spaces, and even professional kitchens integrated into homes. These withstand high temperatures, steam, and acidic cleaning agents without losing their shape or color.

Also, regarding lighting, the choice often falls on recessed LED strips mounted in special millings, featuring polycarbonate diffusers that disperse light uniformly. These are controlled via touch sensors or wireless commands, contributing to both the ambiance and the functional lighting of the countertop or dressing area.

Storage areas are optimized through the use of double internal drawers or vertical pull-out elements, which are particularly useful in small kitchens or high wardrobes. For corner cabinets, "swing" or "magic corner" systems can be installed, allowing full access to the back space without the need for dismantling.

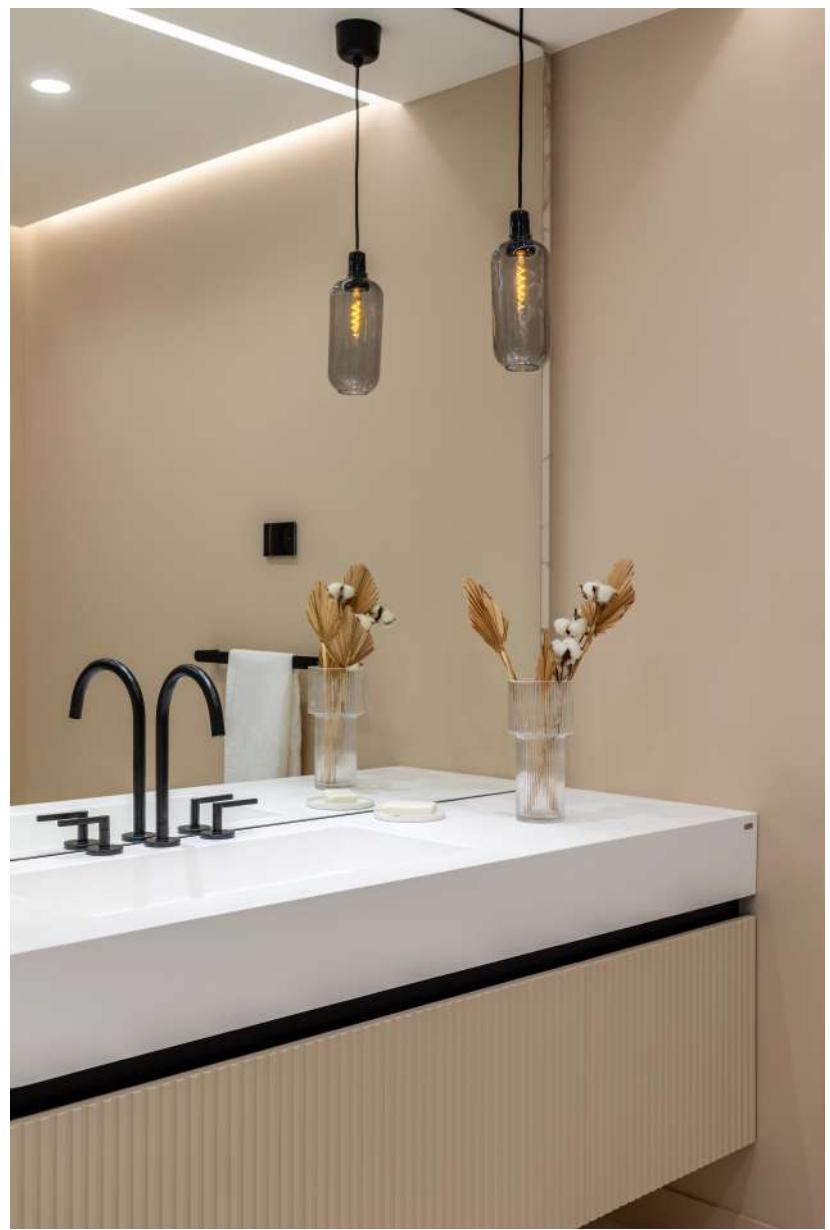

Finishes are not chosen based on color alone. Factors such as UV resistance, antistatic capacity, or antibacterial properties (in the case of kitchen and bathroom spaces) are taken into account. This is why more and more clients are opting for matte polyurethane lacquers, anti-fingerprint embossed textures, or non-porous composite countertops.

In the bedroom or dressing area, preference is given to integrated constructions with sliding doors on hidden perimeter frames, vertical LED lighting systems, and extractable racks for trousers, accessories, and shoes, built with anodized aluminum profiles and textile finishes.

An essential element in modern projects is the integration of technology: built-in sockets, wireless charging systems, and LED lighting controlled via mobile applications or motion sensors. Furniture thus becomes an active part of daily life, rather than just a static setting.

In conclusion, modern custom furniture no longer means just dimensional adaptation, but functional innovation, architectural integration, and a response to a dynamic lifestyle—and the equipment and technologies used are the key to spaces that inspire and solve real needs.

On the aesthetic side, the use of 3D textured surfaces stands out, created through milling or thermoforming, which add depth and dynamism to flat elements. These are frequently found in bathroom furniture fronts, accent pieces, or wall paneling integrated into the furniture project.

Structures are typically made from painted MDF, technical plywood, or high-density melamine-faced chipboard (PAL), depending on the budget and requirements. For the fronts, anti-fingerprint matte or polyester gloss finishes are preferred, while in premium projects, natural veneer—lacquered or treated with special oils to preserve the authentic texture of the wood—is increasingly used.

Natural wood textures for an urban enclave

Shaping the space and finding the most suitable ways to arrange a room is the start of a well-organized plan that brings the much-desired results. To achieve all of this, it is necessary to choose a design style that matches our tastes. In the following sections, we present the most popular interior design styles intended to inspire you in choosing your own style.

As for the metallic details, the decorative and support elements are manufactured using modern CNC machining techniques and anti-corrosion finishes, ensuring impeccable precision and exceptional resistance over time. Modular systems allow for multiple configurations, perfectly adapted to both small and generous spaces, offering maximum flexibility in use.

Choosing the bedroom design represents a decision we must make after a careful analysis of our desires, which should materialize into finished products that are aesthetic but also practical and effective for our well-being. When conceiving the bedroom implementation plan, we must consider the proper arrangement of furniture, a high quality of the chosen products, and the adopted shades that should have a chromatic coherence suited to our aesthetic tastes.

For the interior, metal inserts made of painted steel or anodized aluminum add both rigidity and an extra touch of elegance. Adjustable shelves, modular organization systems, and precise compartmentation—all are designed to maximize every usable inch without compromising on design.

Mai mult, în proiectele complete, mobilierul include și oglinzi încastrate, piese decorative din metal tăiat laser sau elemente de tapițerie montate direct pe panourile verticale, în capete de pat sau spătare de banchete. Acestea nu sunt doar detalii estetice - ci soluții practice, create special pentru confort și coerentă vizuală.

MINIMALIST APARTMENT

FURNITURE: **LEMNARTIS**

DESIGN: **SPARKS ARCHITECTURE**

Custom furniture no longer means just dimensional adaptation, but a careful planning of every functional and aesthetic detail. Depending on the piece's destination—whether it is a kitchen, a walk-in closet, or a living area—the choice of the right materials and systems is essential.

Structures are typically made from painted MDF, technical plywood, or high-density melamine-faced chipboard (PAL), depending on the budget and requirements. For the fronts, anti-fingerprint matte or polyester gloss finishes are preferred, while in premium projects, natural veneer—lacquered or treated with special oils to preserve the authentic texture of the wood—is increasingly used.

We provide you with collections of projects to inspire you, by
Lemnartis.

As for mechanisms, full-extension drawers with silent soft-closing are already a standard. In wall-mounted units, vertical lift doors or "flap" folding systems offer easy access and an airy look, especially in open-space kitchens. Coplanar doors or sliding doors with synchronized rolling are preferred in modern walk-in closets and libraries, where functionality combines with a sober and linear design.

Appartement MG

An apartment with the atmosphere of a 5-star hotel

Inspired by a passion for travel, the owner of this apartment in Iași desired an ambiance that would offer the feeling of a continuous stay in a luxury hotel. The generous space was shaped through a refined mix of colors, light, and carefully selected materials. Elegant accents—such as the kitchen's central island, the fluid-shaped sofa, and the canopy bed—contribute to this exclusive atmosphere. Furthermore, the opening of spectacular perspectives, such as the one between the bathroom and the bedroom fireplace, adds depth and theatricality to the entire design.

In complex projects, modular systems with mobile elements allow for the rapid reconfiguration of furniture, thus adapting to changes in the space's functionality. These solutions are essential in dynamic commercial and residential environments, where versatility becomes a competitive advantage.

Last but not least, the customization of details—from minimalist handles made of precious metals or matte finishes to integrated lighting systems with variable intensity—transforms each piece of furniture into a distinctive element, perfectly tailored to the client's style and needs.

APPARTMENT AIRBNB

Thus, custom furniture is no longer just a functional object, but an expression of technological innovation and artisanal creativity, designed to provide unique and lasting experiences in any space.

In addition to functionality and aesthetics, durability is a fundamental pillar in the creation of premium custom furniture. The use of certified materials resistant to environmental factors—such as moisture-resistant MDF panels, layered wood treated with eco-friendly lacquers, and specially designed sealing systems—guarantees a long life for the furniture, even in high-traffic spaces or varying conditions of temperature and humidity.

PROJECT LA

Modern custom furniture no longer means just dimensional adaptation, but functional innovation, architectural integration, and a response to a dynamic lifestyle—and the equipment and technologies used are the key to spaces that inspire and solve real needs.

Innovations in the field of mechanisms include folding and tilting systems with hydraulic hinges, which allow for space optimization in corner furniture or multi-door cabinets, offering flexibility and easy access. Additionally, rotation and extension mechanisms for shelves and drawers allow for the maximization of usable space without compromising compact design.

FURNITURE: **LEMNARTIS**

DESIGN: **Ştefan Bugalete**

Elegance and Functionality

In an era where urban space is becoming increasingly limited, custom furniture is evolving toward transformable and multi-functional solutions, without aesthetic compromises.

In addition to functionality and aesthetics, durability is a fundamental pillar in the creation of premium custom furniture. DESIGN NOI Studio

PHOTO: Ovidiu Micșa, ADMO Studio

Pentru mobilierul tapițat, tehnologiile moderne includ spume cu memorie și structuri ergonomice care susțin corect postura, combinate cu țesături tehnice care au proprietăți de respingere a lichidelor și autocurățare, ideale pentru un stil de viață activ și contemporan.

Biophilic Design in spaces that heal

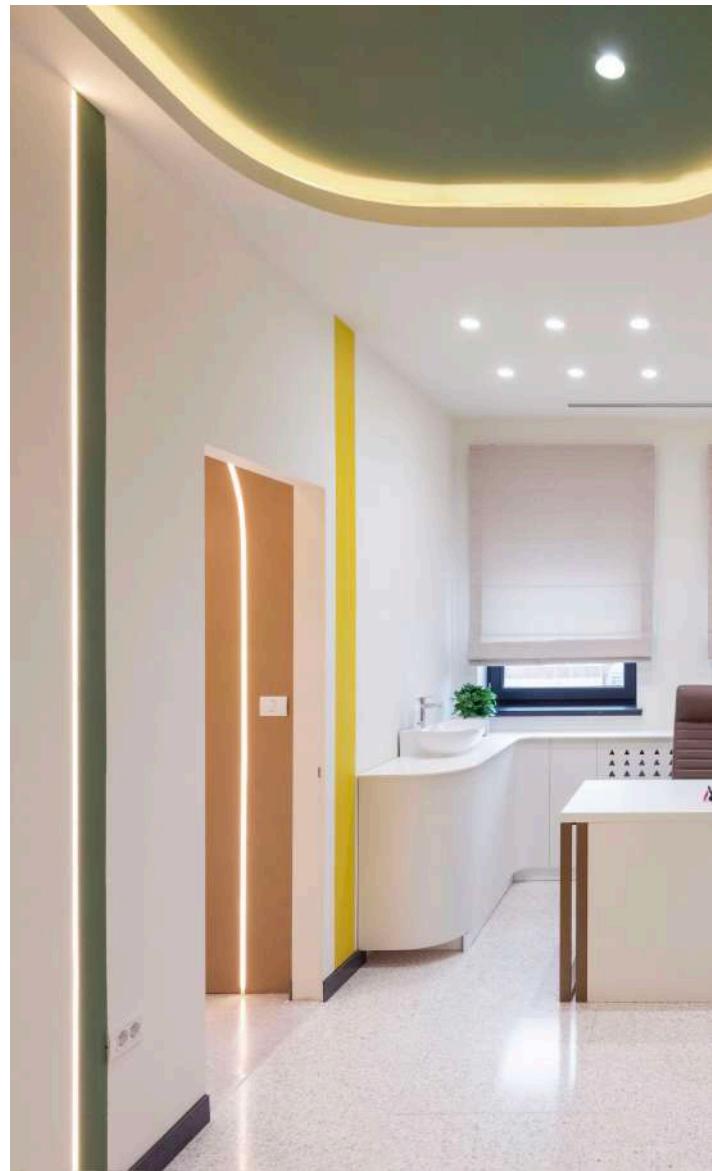

In the design of this recovery clinic, we focused on creating an environment that supports the healing process in an integrated and complete way. Every detail was carefully chosen to transform the space into a place that promotes recovery, both physically and emotionally.

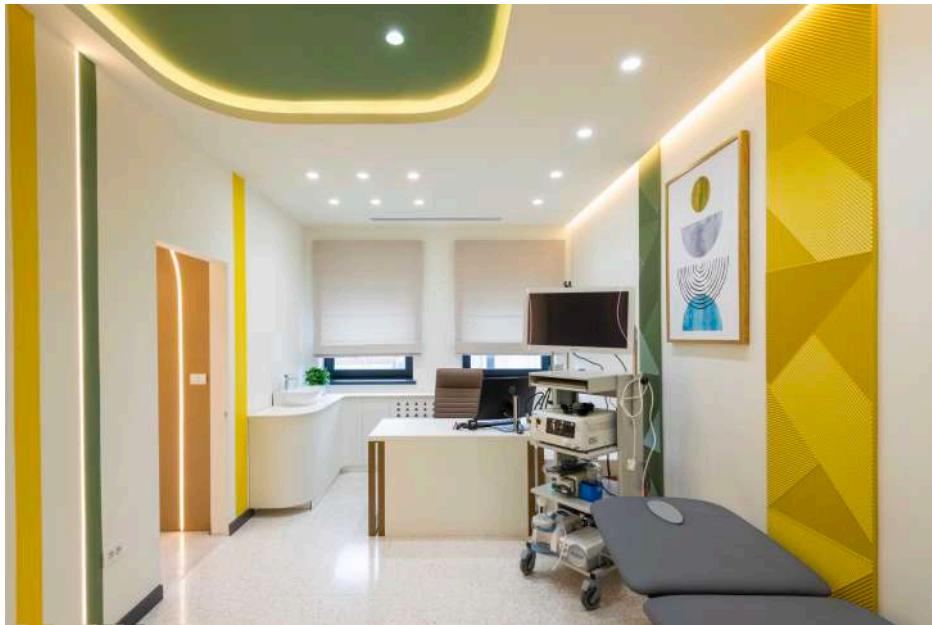

Last but not least, in upholstered furniture, new technologies allow for the combination of traditional materials with high-performance technical fibers, resistant to stains and wear, without sacrificing comfort. This aspect is essential for furniture intended for intensive daily use, which must maintain an impeccable appearance over time.

For finishes, the current trend is shifting toward tactile surfaces with natural or matte textures, which add depth and sophistication to the furniture. These are complemented by advanced painting and laminating techniques with metallic, pearlescent, or even soft-touch effects, which enhance the premium feel and comfort to the touch.

Thus, premium custom furniture becomes not just a piece of furniture, but a complete ecosystem that integrates technology, design, and functionality in a harmonious way, offering users unique experiences and solutions tailored to their specific needs.

Thus, through a combination of cutting-edge technology, superior quality materials, and personalized design, custom furniture becomes a complete solution that satisfies the most demanding standards and modern lifestyles.

We provide you with collections of projects to inspire you, by

FURNITURE: **LEMNARTIS**

DESIGN: **Studio Quary**

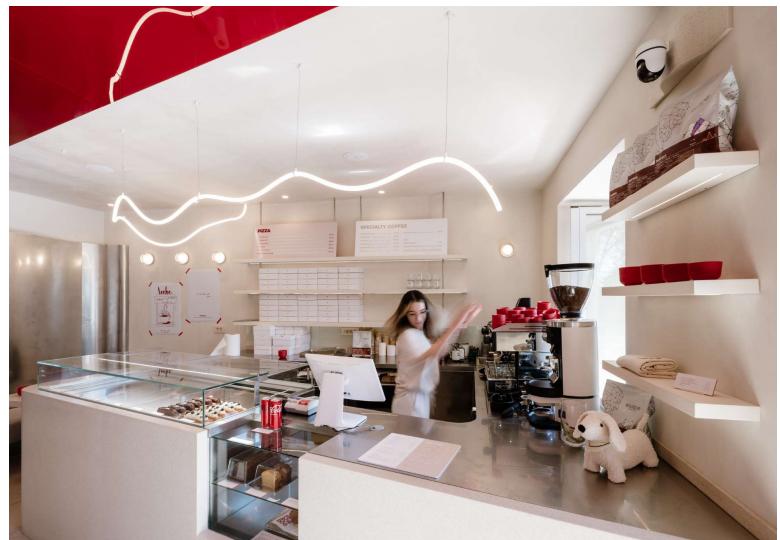

For spaces with special requirements, intelligent organization systems are used, featuring compartments with automated access and internal LED lighting that activates upon opening the furniture, providing perfect visibility even in the darkest corners. These solutions are essential for offices or custom walk-in closets, where time and accessibility are priorities.

PROJECT LECHE

COLOR, TEXTURE, LIGHT, POSITIONING, AND DIMENSIONS

High-tech materials, such as antibacterial and UV-resistant laminates, are used to protect surfaces exposed to frequent contact, especially in commercial spaces or those dedicated to intense use. These finishes are combined with natural textures, such as solid layered wood or fine veneers, to create a perfect balance between aesthetics.

As for metallic details, the decorative and support elements are manufactured using modern CNC machining techniques and finished with anti-corrosion treatments, ensuring impeccable precision and exceptional durability over time. Modular systems allow for multiple configurations, perfectly adapted to both small and generous spaces, offering maximum flexibility in use.

In addition, upholstered furniture stands out through the use of innovative materials, such as anti-stain technical fabrics and memory foams, which ensure superior ergonomics and easy maintenance. The frames are crafted with precision through CNC machining, combining wood with metal structures for exceptional stability and optimal weight.

In the creation of high-quality custom furniture, attention to detail and precision in execution are essential.

Thus, each piece of custom furniture is a perfect combination of technology, craftsmanship, and design, meant to offer clients not only functionality but also a superior aesthetic experience, tailored to their personal needs and tastes.

FURNITURE: **LEMNARTIS**

DESIGN: **aPunct**

Integrated LED lighting systems, with smart control via remote or mobile apps, allow for the adjustment of light intensity and color, accentuating the furniture's design and creating personalized ambiances for any type of space, from elegant living rooms to high-tech offices.

A new ethics of medical spaces

Onora Dental Clinic

The interior design of the Onora dental clinic was conceived to transcend the typical image of medical spaces, transforming it into a warm and welcoming environment. Across a surface area of 200 square meters, the design team decided to create only three spacious treatment rooms, accompanied by generous waiting areas, to convey a sense of freedom and fluidity.

For finishes, preference is given to premium materials such as natural veneers with fine textures, eco-friendly quick-drying lacquers, and matte or satin surfaces, which highlight the wood grain and give the furniture a sophisticated and contemporary look. Metallic inserts, with matte or glossy finishes, complement the modern aesthetic and provide an impactful visual contrast.

who also happen to be great at their jobs

In the case of upholstered furniture, frames made of layered wood combined with metal support elements are used to ensure both stability and ergonomic comfort. The upholstery is carefully chosen, utilizing high-quality fabrics or eco-friendly leather treated to resist wear and fading, offering an extra touch of elegance and durability.

endly specialists
treat at their jobs

In the production of high-quality custom furniture, attention to detail and precision in execution are essential. The use of CNC-based fastening and joining systems ensures perfect installation, free of gaps or misalignments, while special treatments applied to the wood and panels guarantee increased durability, protecting against humidity, temperature variations, and mechanical wear.

In the design process of custom furniture, the emphasis is placed on integrating advanced technological solutions that maximize both the utility and aesthetics of each piece. Soft-close mechanisms, based on hydraulic or magnetic dampers, ensure the silent and fluid operation of drawers and doors, eliminating premature wear and enhancing user comfort.

FURNITURE: **LEMNARTIS**

DESIGN: **Ştefan Bugalete**

PHOTO: **Cristian Istrate**

By combining traditional craftsmanship with state-of-the-art technologies and meticulous attention to every detail, custom furniture becomes a complete and exclusive solution that meets the most demanding client requirements, offering comfort, functionality, and style in a unified package.

Thank you!

We conclude this edition with gratitude for your time and interest in the Lemnartis universe.

Our wish is that every page has been a source of inspiration, an invitation to refinement and functionality, where design meets craftsmanship.

We continue to create not just furniture, but spaces that tell stories tailored to the vision and style of each partner.

We remain close to you, with openness and passion,

The Lemnartis Team
